**A82-23259 † The condition of pulmonary surfactant and the ultrastructure of the blood-air barrier in acute hypoxia (Sostoianie legochnogo surfaktanta i ul'trastruktura aerogematicheskogo bar'era pri ostroi gipoksii).** K. K. Zaitseva, V. I. Skorik, and S. A. Shliapnikova (Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 92, Dec. 1981, p. 653-656. 18 refs. In Russian.

Results are presented of an evaluation of the condition of the pulmonary surfactant alveolar complex and the ultrastructure of the blood-air barrier under conditions of acute respiratory hypoxia. Lung samples were taken from dogs following 1.5-2 hours of artificial bradypnea and analyzed by histological, electron microscopic and biochemical techniques. The hypoxic dogs are observed to exhibit tendencies towards an increased pulmonary coefficient and to be characterized by a decreased air bubble stability coefficient, a five-fold increase in minimum surface tension and a two-fold decrease in the surface tension stability index. Changes in the shape of the surfactant hysteresis loop are also observed, along with a decrease in phosphatidyl choline levels and an increase in lysophosphatidyl choline. Indications of emphysema, interalveolar septal thickening, epithelial cells and erythrocytes in the alveolar cavities, edema in the interalveolar septa and general signs of air-blood barrier deterioration are also found. Results are interpreted in terms of the peroxidation of the surfactant lipids, the impairment of barrier permeability, the filling in of septal space, and disturbances in type II pneumocyte function. A.L.W.

**A82-23260 † Effects of gravitational atelectases on the expiratory closure of respiratory tracts (Vliianie gravitatsionnykh atelektazov legkikh na ekspiratornoe zakrytie dykhatel'nykh putei).** M. A. Tikhonov and A. V. Kondakov. *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 92, Dec. 1981, p. 663-666. 10 refs. In Russian.

The dynamics of the expiratory closure of respiratory tracts during gravitationally induced atelectasis are investigated in a study of the characteristics of regional pulmonary ventilation. Static and dynamic lung capacities, intrapulmonary gas compositions and expiratory airway closure were monitored in nine subjects undergoing centrifugation at +Gz forces of 2 to 8 g while breathing air or pure oxygen. In contrast to acceleration while breathing air, exposure to pure oxygen is found to lead to coughing and discomfort in most subjects, as well as decreases in total and respiratory lung capacities, and forced inspiratory capacity. Indications of ventilatory impairment of the restrictive type due to the appearance of transitory atelectases simultaneous with the development of peripheral bronchial obstructions is also obtained which may be explained by a biomechanical hypothesis. The ventilation impairments have important implications for the development of hypoxemia during acceleration. A.L.W.

**A82-23261 † Preparation of purified erythropoietin from rabbit blood plasma (Poluchenie ochishchennogo eritropoetina iz plazmy krovi krolika).** S. N. Osipova, V. V. Mezhevikin, and I. I. **A82-23262 † Characteristics of the lifting reflex in albino rats following prolonged space flight /Effects of weightlessness and artificial gravity/ (Osobennosti liftnoi reaktsii u belykh krys posle dlitel'nogo kosmicheskogo poleta /Vliianie nevesomosti i iskusstvennoi sily tiazhesti/).** G. S. Aizikov, A. S. Markin, and A. V. Mokrousova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 92, Dec. 1981, p. 722-725. 7 refs. In Russian.

The effects of prolonged space flight and rotation to simulate normal gravity on the lifting reflex in animals are investigated. The reflex, characterized by limb extension and elevation of the torso upon downward motion in the horizontal position, was evaluated in intact and labyrinthectomized rats before and after flight for 18.5 and 19.0 days on the Cosmos 936 and 1129 biosatellites under conditions of weightlessness or artificial gravity in an onboard centrifuge. Electromyography of the ocular and gastrocnemius muscles and observation of the mechanical component of muscle reaction reveal the lifting reflex to be present in all animals post flight, although the latent time of the reflex as indicated by the mechanical component increased significantly in uncentrifuged animals. A significant weakening of the jump readiness reflex upon downward motion in the head-down position is also observed in rats having experienced artificial gravity or weightlessness. Results suggest that the initial vestibular and-conductive stages in the reflex remain unaltered by weightlessness, which instead influences muscular function. A.L.W.

**A82-23263 † Reactive changes in autonomic synapses upon frequency electrostimulation (Reaktivnye izmeneniia vegetativnykh sinapsov pri ikh chastotnoi elektrostimuliatsii).** O. S. Sotnikov, Iu. P. Pushkarev, and G. A. Zolotareva (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny*, vol. 92, Dec. 1981, p. 743-747. 14 refs. In Russian.

Modifications to peripheral autonomic nervous system synapses occurring as a result of high-frequency orthodromal electrical stimulation are investigated in relation to the colloid-chemical transformations of the synaptoplasma produced. Vital phase-contrast microscopy, vital staining and electron microscopy were performed of isolated neurons in the vagosympathetic trunk of the frog and the cervical sympathetic ganglion of the cat during electrical stimulation at a frequency from 20 to 60 pulses/sec for 5-15 min, as well as in electrophysiological controls. Results reveal a rounding of the synaptic buds, an increase in their sizes and a decrease in optical density, decreases in the numbers of dye granules, and a decrease in the numbers of light synaptic vesicles accompanied by the appearance of osmiophilic, myelin-like bodies, dense-core vesicles and glycogen-like granules. The structural changes appearing during the course of electrical stimulation are explained in terms of changes in the colloidal chemistry of the synaptoplasma. A.L.W.

**A82-23268 † Changes with age in the cholin- and adrenergic innervation of the human heart (Vozrastnye izmeneniia kholin- i adrenergicheskoi innervatsii serdtsa cheloveka).** R. I. Abraitis, V. S. Vaichekauskas, R. A. Stropus, and K. A. Tamashauskas (Kaunasskii Meditsinskii Institut, Kaunas, Lithuanian SSR). *Kardiologiia*, vol. 21, Sept. 1981, p. 106-108. 21 refs. In Russian.

The development of morphological involutions of the autonomic innervation of the human heart and the significance of these changes for the regulation of cardiovascular activity are investigated in histochemical and physiological studies of hearts from accident victims of various ages. It is found that the differentiation of the cholinergic nervous apparatus is complete by the age of 30, with involution of the cholinergic innervation beginning after the age of 50. The adrenergic innervation is observed to be more developed in children, with involution occurring progressively past the age of 30. After the age of 60, the myocardium is completely free of catecholamines. Myocardial sensitivity to adrenalin is found to be practically the same at all ages. It is suggested that involution of the autonomic innervation of the heart might serve as a morphological basis for the study of the neurohumoral regulation of cardiac function. A.L.W.

**A82-23270 † A sino-auricular block with Samoilov-Wenkeback periods - Diagnosis with the aid of an automated analysis of the structure of heart rhythms and clinical assessment (Sinoatrial'naia blokada s periodami Samoilova-Venkebakha: Diagnostika pri pomoshchi avtomaticheskogo analiza struktury serdechnogo ritma i klinicheskaia otsenka).** A. V. Nedostup, A. A. Platonova, and E. A. Bogdanova (I Moskovskii Meditsinskii Institut, Moscow, USSR). *Kardiologiia,* vol. 21, Oct. 1981, p. 38-42. 29 refs. In Russian.

**A82-23271 † Changes in regional and central hemodynamics during the treatment of hypertensive patients with obsidan, apressin and their combination (Izmeneniia regionarnoi i tsentral'noi gemodinamiki pri lechenii bol'nykh gipertonicheskoi bolezn'iu obsidanom, apressinom, i ikh kombinatsiei).** E. V. Erina and G. I. Ozokvo (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Kardiologiia,* vol. 21, Mar. 1981, p. 14-19. 20 refs. In Russian.

Changes in the parameters of central and regional hemodynamics brought about by the treatment of hypertensives with the beta-blocker obsidan, the vasodilator apressin and a combination of the drugs are investigated. Tetrapolar chest rheography and bipolar rheoencephalography and leg rheography were performed before and during treatment of 80 patients suffering from stage II hypertension with obsidan alone and then combined with apressin after 15-17 days, apressin alone and then combined with obsidan after 15-20 days, or obsidan and apressin simultaneously for up to 45 days. It is found that obsidan reduces cardiac output and elevates peripheral vascular resistance, while apressin lowers vascular tonus and stimulates cardiac activity. Apressin induces an improvement in brain and peripheral circulation, although with a greater asymmetry in brain and leg rheograms, while obsidan treatment leads to a decrease in rheoencephalogram and leg rheogram asymmetry. Finally, the combination of these drugs is observed to reduce the undesirable effects on hemodynamics and potentiate the hypotensive effect. A.L.W.

**A82-23272 † Microcirculatory pathology under conditions of tissue arterial blood flow insufficiency (Patologiia mikrotsirkuliatsii u usloviiakh nedostatochnogo pritoka arterial'noi krovi v tkani).** N. E. Iarygin, T. N. Nikolaeva, and M. B. Chuprunova (Iaroslavskii Meditsinskii Institut, Yaroslavl, USSR). *Kardiologiia,* vol. 21, May 1981, p. 26-30. 12 refs. In Russian.

Results are presented of a morphological study of microcirculation under conditions of insufficient arterial blood flow. Observations were made of the condition of the vascular bed in the omentum of infants having died in the first half year of life from congenital heart defects accompanied by hypovolemia in the systemic circulation, and premature newborns having died as a result of primary cardiovascular insufficiency. Changes in vascular morphology are observed which are attributed to the combination of adaptive processes, related to the maximum utilization of the arterioles, the nonequilibrium perfusion of the capillary net, the reduced deposition of blood in the postcapillary and collecting venules and proper levels of peripheral resistance and adequate postcapillary pressure, and pathological processes, including exsanguination and the aggregation and adhesion of blood cells. It is suggested that the pathology observed in the omentum reflects that present in the terminal vessels of the entire systemic circulation. A.L.W.

**A82-23273 † Cybernetic analysis of cardiac rhythm during a graded exercise test in Salyut-6 crew members (Kiberneticheskii analiz serdechnogo ritma pri probe s dozirovannoi fizicheskoi nagruzkoi u chlenov ekipazhei orbital'noi stantsii 'Saliut-6').** R. M. Baevskii, Zh. V. Barsukova, and I. G. Tazetdinov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Kardiologiia,* vol. 21, Nov. 1981, p. 100-104. 19 refs. In Russian.

The technique of cybernetic analysis of cardiac rhythm is applied to the evaluation and prediction of the functional condition of the cosmonaut cardiovascular system during exercise. The analysis was performed on EKG data obtained for the crews of four prolonged expeditions to Salyut-6 during daily bicycle ergometer tests, and consisted of the determination of the statistical parameters of a series of cardiac intervals along with autocorrelation and spectral analysis. Results indicate that adaptation to the conditions of extended space flights is accompanied by regular changes in the controlling systems, which may be used to determine the course of adaptive processes. In particular, indicators of an unfavorable course of adaptation include a significant increase in the stress index during exercise and a decrease in the difference between the values of slow wave power before and after exercise. The adaptive cost is thus shown to depend on flight duration, and complexity, and individual levels of physical training. A.L.W.

**A82-23274 † Modeling interactions between protein molecules - Investigating complexes of indole and its derivatives through infrared spectroscopy (Modelirovanie mezhmolekuliarnykh vzaimodeistvii v belkakh - Izuchenie kompleksov indola i ego proizvodnykh metodom IK-spektroskopii).** V. N. Umetskaia and L. V. Konovalov (Akademiia Nauk SSSR, Institut Tsitologii, Leningrad, USSR). *Biofizika,* vol. 26, Sept.-Oct. 1981, p. 773-776. 10 refs. In Russian.

**A82-23275 † Photodamage to the rhodopsin molecule - SH-group oxidation (Fotopovrezhdenie molekuly rodopsina - Okislenie SH-grupp).** I. D. Pogozheva, I. B. Fedorovich, M. A. Ostrovskii, and N. M. Emanuel' (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR). *Biofizika,* vol. 26, May-June 1981, p. 398-403. 22 refs. In Russian.

The role of SH-group oxidation in damage to the rhodopsin molecule resulting from intense or prolonged exposure to visible light is investigated. The illumination of rod outer segments from the frog retina by bright light is found to result in the oxidation of the protein as well as lipid components of the photoreceptor membrane, with the degree of oxidation depending on the intensity and duration of irradiation. Estimations of SH-group contents in the membrane indicate that the oxidation of rhodopsin, the most important membrane protein, takes place by the oxidation of thiol groups to form disulphide bonds, which disturb the native conformation of the molecule and lead to protein aggregation. Inhibitors of free radical processes (antioxidants) are found to prevent completely lipid oxidation and reduce protein oxidation. Results also suggest that retinal acts as a photosensitizer of the photoreceptor membrane components to photooxidation. A.L.W.

**A82-23276 † The central hemodynamics of patients with sepsis and acute renal insufficiency (Sostoianie tsentral'noi gemodinamiki u bol'nykh sepsisom i ostroi pochechnoi nedostatochnost'iu).** M. I. Kuzin, V. A. Svetlov, M. I. Sorokina, and A. I. Kolesnikov (I Moskovskii Meditsinskii Institut, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik,* no. 8, 1981, p. 40-45. 14 refs. **A82-23277 † Biological rhythm aspects of adaptation mechanisms (Mekhanizmy adaptatsii v bioritmologicheskom aspekte).** V. N. Reushkin. *Akademiia Meditsinskikh Nauk SSSR, Vestnik,* no. 12, 1981, p. 50-54. 35 refs. In Russian.

Characteristics of an adaptive time-dependent response to an external stimulus are discussed. The response, termed the expectancy reaction, varies with the type and intensity of a single exposure and prepares the organism for a second encounter with the stimulus after a period of 24 hours. The physiological preparation involves the activation of functional reserves, as well as structural adjustments connected with the synthesis of adaptive enzymes and modifications to cellular structures so that tissues and organs taking part in the adaptation process will be subject to less stress. The characteristics of the expectancy reaction suggest the division of the first state of the stress reaction into three phases, as observed in disease pathogenesis. A.L.W.

**A82-23278 † Genetic and individual differences in cardiovascular disturbances in rats during experimental emotional stress (Geneticheskie i individual'nye razlichiia serdechno-sosudistykh narushenii u krys pri eksperimental'nom emotsional'nom stresse).** K. V. Sudakov, V. A. Dushkin, and E. A. Iumatov (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik,* no. 12, 1981, p. 32-39. 27 refs. In Russian.

The role of genetic and individual differences in the determination of susceptibility to cardiovascular disorders under conditions of experimentally induced emotional stress is investigated in noninbred, and the Wistar, August and Beg lines of inbred, rats exposed to acute or chronic immobilization. Measurements of changes in heart rate and arterial pressure during 30-hour immobilization reveal the Wistar rats to be most tolerant to emotional stress, while the August rats exhibit the least tolerance. Prognostic criteria allowing the prediction of cardiovascular disturbances and the possibility of sudden death on the basis of early changes in blood pressure and cardiovascular activity are developed. A significant correlation is also found between motor activity and individual and interline differences in stress tolerance, which allows the separation of individuals into groups of tolerant or predisposed animals. It is also noted that animals with varying degrees of tolerance to emotional stress are found within each genetic line. A.L.W.

**A82-23279** † **The role of sleep in the adaptation system and in the prognosis of psychological readiness of athletes in competition (Rol' sna v sisteme adaptatsii i v prognozirovanii psikhologicheskoi gotovnosti sportsmenov k sorevnovaniiam).** S. **A82-23281** † **Indicators of the T system of immunity during physical overstraining (Nekotorye pokazateli T-sistemy immuniteta pri fizicheskom pereutomlenii).** V. M. Shubik, V. Iu. Viaz'menskii, and I. A. Zykova (Leningradskii Nauchno-Issledovatel'skii Institut Radiatsionnoi Gigieny, Leningrad, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Sept. 1981, p. 28, 29. 8 refs. In Russian.

The condition of the T system of immunity is studied in athletes undergoing intense training. Blood T lymphocyte levels and functioning and reactions to the Mantoux test were evaluated in 114 swimmers aged 12-17 undergoing twice daily training six days a week, and 106 adolescent controls. Whereas no significant differences are found between T lymphocyte levels in the athletes and controls, a considerable reduction in thymidine uptake following lymphocyte culture stimulation with phytohemagglutinin is observed in the athletes relative to the controls, indicating a decreased mitogenic response. A lower proportion of positive reactions to the Mantoux test is also obtained in the swimmers, which supports the existence of an impairment in T-lymphocyte function in intense physical exercise. A.L.W.

**A82-23282** † **Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes (Upravlenie chislom razriadov otdel'nykh dvigatel'nykh edinits skeletnykh myshts kak test dlia vyiavleniia koordinatsionnykh sposobnostei sportsmenov).** R. I. Popugaev (Udmurtskii Gosudarstvennyi Universitet, Izhevsk, USSR) and O. P. Panfilov (Khabarovskii Gosudarstvennyi Institut Fizicheskoi Kul'tury, Khabarovsk, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Oct. 1981, p. 24, 25. 16 refs. In Russian.

The functioning of the vestibular system in the perception of three-dimensional body displacements during the performance of gymnastic exercises involving body rotation and free flight, when the visual analyzer is temporarily inoperative, is discussed based on a review of literature and observational data. Studies of vestibular analyzer excitation thresholds in gymnasts at various levels are presented which demonstrate that the excitability threshold may be used in the evaluation of the functional condition of the vestibular analyzer. At the same time, nystagmography, together with statokinetic stability, appears to be more informative in the study of the motion capabilities of gymnasts. A.L.W.

**A82-23285** † **The physiological condition of press operators (Sostoianie fiziologicheskikh funktsii u rabochikh-shtampovshchikov).** B. M. Ratsenberg and N. G. Severova. *Gigiena Truda i Professional'nye Zabolevaniia,* July 1981, p. 57-59. 7 refs. In Russian.

Results are presented of a study of the physiological functions of workers performing light manual labor characterized by monotony and the necessity of sitting for long periods of time. Press operators were evaluated for heart rate, arterial pressure, visual-motor reaction time, critical flicker fusion and muscular endurance six times during the course of a work shift. The indicators followed are observed to undergo significant variations during the course of work, most notably a slowing of the pulse attributed to monotony, a decrease in critical flicker fusion frequency and increase in reaction time indicating stress on visual-motor functions and a decrease in central nervous system lability, and a decrease in muscle strength indicative of fatigue. Physiological conditions are found to be improved, however, following the institution of improvements in working conditions, including noise reduction, increased illumination, and three additional rest periods, during two of which physical exercises were performed. A.L.W.

**A82-23286** † **Possibility of using recorder systems with a low upper frequency boundary in EMG telemetry (Vozmozhnost' ispol'zovaniia sistem registratorov s nizkoi velichinoi verkhnei granitsy chastoty pri telemetricheskoi peredache EMG).** H. The use of a telemetry system combined with an automatic recorder with a limiting upper frequency of 80 Hz in the remote monitoring of electromyograms is investigated in a study of isometric, isotonic and rhythmic exercises in six healthy men. Comparison of electromyograms recorded by the automatic recorder, a standard electromyograph and a photorecorder reveals all three telemetric approaches to provide sufficient time reproducibility, steadily increasing biopotentials dependent on stress, stable relative scatter and significant linear correlations between muscular tension and electric potentials. Nearly identical EMG parameters demonstrate the potential of both the mechanical and the photorecorder instrument in the recording of EMGs, with the upper limit of 80 Hz sufficient for the quantitative evaluation of physical stresses. A.L.W.

**A82-23287** † **Reaction of the blood system to single and double exposure to a stress agent (Reaktsiia sistemy krovi na odnokratnoe i dvukratnoe vozdeistvie stressornogo agenta).** M. I. Fedotova and O. I. Belousova. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* Nov.-Dec. 1981, p. 24-27. 7 refs. In Russian.

Experiments were performed on male Wistar rats to study the reaction of the blood system to single and double exposure of immobilization stress (the exposure lasted for six hours and was repeated 6 and 14 days after the initial immobilization). It was found that neutrophilic leukocytosis and lymphopenia were maintained in the blood but were less marked after the repeated immobilization. B.J.

**A82-23288** † **Prediction of shifts in the radiation resistance of animals under the influence of various factors (K voprosu o prognozirovanii sdvigov radiorezistentnosti zhivotnykh pod vliianiem razlichnykh vozdeistvii).** N. Biologicheskikh Problem, Moscow, USSR). *Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia,* Nov.-Dec. 1981, p. 891-898. 22 refs. In Russian.

Experiments performed on mice and rats showed that shifts in the radiation resistance of animals can be produced through the influence of various irritants which change the initial functional state of the organism. Besides ionizing radiation, the animals were subjected to the effects of gravitational acceleration stress, noise, reduced temperature, and artifical illumination. The results point to the conclusion that the prediction of the radiation-induced damage of animals in the range from mean lethal dose to sublethal doses of ionizing radiation should be based not on the magnitude of the dose but also on the initial functional state of the organism. B.J.

**A82-23291 † Correlation of behavioral rest-activity phases and the characteristics of the spatial organization of cortical potentials in the case of experimental neurosis (Sootnoshenie povedencheskikh faz 'pokoi-aktivnost' i kharakteristiki prostranstvennoi organizatsii potentsialov kory pri eksperimental'nom nevroze).** I. N. Knipst, A. V. Korinevskii, and S. N. Luk'ianova (Akademiia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR). *Zhurnal Vysshei Nervnoi Deiatel'nosti,* vol. 31, Jan.-Feb. 1981, p. 86-95. 15 refs. In Russian.

It was found that the development of experimental neurosis in rabbits led to stable changes in the correlation of behavioral rest-activity phases: some activity phases were prolonged while some rest phases were considerably shortened. An analysis of the spatial-temporal organization of cortical potentials showed that these changes were manifested not only in quantitative characteristics of the rest-activity phases but also in their qualitative characteristics. The 'depth' of the rest states was found to decrease in the case of neurosis, and the spatial-temporal characteristics of cortical potentials during the activity phases were disorganized. B.J.

**A82-23294 † The elimination of metabolic products in expired air in relation to the carbon dioxide content in a sealed chamber (Vydelenie produktov zhiznedeiatel'nosti s vydykhaemym vozdukhom v zavisimosti ot soderzhaniia uglekislogo gaza v germoob'emakh).** A. V. Sedov, G. A. Gaziev, N. A. Surovtsev, G. E. Mazneva, L. I. Kobzeva, O. N. Shevkun, and S. V. Bychkov. *Gigiena i Sanitariia,* Oct. 1981, p. 90, 91. In Russian.

The dependence of the rate of the respiratory elimination of metabolic products on the carbon dioxide content in a sealed chamber is investigated in a study of possible toxicological effects and air purification requirements. Rates for the expiration of carbon oxides, methane, methylketones, amino compounds and ammonia were measured in subjects breathing air containing 0.03, 0.5 and 2% CO2. Analysis of the data is used to derive regression equations expressing increases in the respiratory elimination rates of the various compounds with increasing CO2 content. These increases are attributed to the effects of hyperventilation observed in the subjects. A.L.W.

**A82-23302 † The work capacity of seamen under an altered schedule of work and rest (Rabotosposobnost' moriakov v usloviiakh izmenennogo rezhima truda i otdykha).** V. N. Evstaf'ev, L. M. Shafran, and O. Iu. Netudykhatka. *Voenno-Meditsinskii Zhurnal,* Nov. 1981, p. 46, 47. 9 refs. In Russian.

The effect of a 10-hour shift on the work capacity (quantitative and qualitative) of 252 seamen ranging in age from 19 to 45 is investigated. The ships, 10 in all, were at sea for between 15 and 120 days. The longer shift is found to lower the work capacity and to bring about certain physiological changes. However, it is also found that shore leave for a period proportional to that of the voyage removes these deleterious effects. C.R.

**A82-23303 † A system for the rapid operational evaluation of pilot performance (Sistema operativnoi ekspress-otsenki effektivnosti operatorskoi deiatel'nosti letchika).** A. A. Bezbogov, L. I. Mazur, and V. P. Merkulov. In: Investigation and simulation of human-operator activity (Issledovanie i modelirovanie deiatel'nosti cheloveka-operatora). Moscow, Izdatel'stvo Nauka, 1981, p. 80-84. In Russian.

It is pointed out that simulators and on-board computers offer only limited possibilities for evaluating pilot performance. The principles underlying the construction of an operational, as opposed to analytical, evaluation system are set forth. The system described is shown to provide real-time evaluation provided the data feed rate does not exceed 60 Hz. Higher rates are possible, however, when the number of parameters being processed is decreased. C.R.

**A82-23304** † **A method for automatically evaluating operator performance (Ob odnom metode avtomaticheskoi otsenki effektivnosti operatorskoi deiatel'nosti).** A. A. Bezbogov, L. I. Mazur, and V. P. Merkulov. In: Investigation and simulation of human-operator activity (Issledovanie i modelirovanie deiatel'nosti cheloveka-operatora). Moscow, Izdatel'stvo Nauka, 1981, p. 76-80. In Russian.

It is pointed out that statistics show human factors to be responsible for a large number of mistakes and that the proportion of these mistakes in showing a tendency to increase. Since the skill of an operator or pilot receiving training in a ground simulator is evaluated by an instructor, subjective elements come into play. The automatic method proposed here is based on statistical standards and involves a comparison, by computer, between actual values and prescribed values. C.R.

**A82-23305** † **An investigation of the visual observations made by cosmonauts under experimental and actual conditions (Issledovanie deiatel'nosti kosmonavta po vizual'nomu nabliudeniiu v eksperimental'nykh i real'nykh usloviiakh).** G. I. Vorob'ev, P. R. Popovich, and L. D. Smirichevskii. In: Investigation and simulation of human-operator activity (Issledovanie i modelirovanie deiatel'nosti cheloveka-operatora). Moscow, Izdatel'stvo Nauka, 1981, p. 70-76. In Russian.

In analyzing the visual observations made by cosmonauts, it is found that at least three actions are necessary: searching for the object, preparing the instrument, and recording the observation. Time is lost between each step. The case investigated here involves observation of the earth's surface, the time of observation being a function of orbital velocity, spacecraft altitude, and angle of view. Using both flight data and data from tests carried out in an anechoic chamber, it is found that time is lost to an adaptation period and, toward the end of the flight, to fatigue. To minimize these losses, it is recommended that an allowance be made for fatigue and that the conditions under which preflight training is carried out be as close as possible to actual flight conditions. C.R.

**A82-23306** † **The modeling of operator activity in referenceless space (Osobennosti modelirovaniia deiatel'nosti operatora v bezopornom prostranstve).** Iu. N. Glazkov. In: Investigation and simulation of human-operator activity (Issledovanie i modelirovanie deiatel'nosti cheloveka-operatora). Moscow, Izdatel'stvo Nauka, 1981, p. 63-69. 6 refs. In Russian.

The mathematical and physical modeling of the rotational and translational motions of cosmonauts in extravehicular space is discussed. Input data to biomechanical models of the cosmonaut-maneuvering unit system are identified, and the necessity of taking into account displacements of the center of mass in calculations of translational motion due to reaction forces is pointed out. Examples are presented of the mathematical modeling of system rotation about the center of mass during arm motion in a wide arc in the sagittal plane, and a gyroscopic system for the orientation and stabilization of the maneuvering unit by the reduction of the sum of kinetic torques. It is pointed out that such mathematical modeling allows the preliminary evaluation of cosmonaut manuevering units. Physical models of open space are then considered which include neutral buoyancy conditions, parabolic flight and specialized appartus simulating various degrees of freedom. It is noted, however, that no modeling methods can provide a complete representation of the actual conditions in open space. A.L.W.

**A82-23307** † **Investigations of the visual identification of abstract spacecraft models (Issledovaniia zritel'nogo opoznaniia abstraktnykh modelei kosmicheskikh ob'ektov).** E. A. Ivanov and A. Ia. Frolov. In: Investigation and simulation of human-operator activity (Issledovanie i modelirovanie deiatel'nosti cheloveka-operatora). Moscow, Izdatel'stvo Nauka, 1981, p. 30-42. 13 refs. In Russian.

The accuracy of the visual identification of spacecraft is an important factor in the success of a manned space mission. The present paper presents an investigation of the characteristics of the visual perception and identification of spacecraft models consisting of combinations of various plane geometrical shapes. Probabilities and times of correct identification were determined for 12 operators shown sequences of nine brightly illuminated spacecraft models against a black referenceless field, and compared with a generalized identification criterion calculated as a function of the relative prevalence of different identifying features. Correct identifications are observed to decrease and identification time to increase with increasing model complexity, while differences in the identifiability of shapes with the same number of components correlate with the identification criterion. Other features observed to facilitate identification include general external appearance, illumination levels and the condition of the visual analyzer as indicated by the acuity of night vision. A.L.W.

**A82-23310** **Effects of attitudes on the performance of supervisors.** G. C. Kinney (Mitre Corp., McLean, VA). In: Air Traffic Control Association, Annual Fall Conference, 25th, Arlington, VA, October 19-24, 1980, Proceedings. Arlington, VA, Air Traffic Control Association, 1980, p. 25-30.

The effects of certain mental attitudes of team supervisors on the job are considered. Each attitude discussed is related to motives for the attitude. For helpful attitudes, management actions are considered which would support the attitude. For attitudes which are not helpful, actions are suggested which could help to remedy the attitude, or at least diminish its effects on job performance. An attitude, according to the meaning of this term in the investigation, is a tendency for a person to respond favorably or unfavorably to persons, situations, objects, or events. The responses are essentially automatic once an attitude has developed. Attitudes are formed by a person's social class, social groups, schools, families, experiences, and goals. Relations between attitudes and performance are discussed. G.R.

**A82-23370** **A new concept in life support systems - The NGL molecular sieve oxygen generator.** F. Haigh (Normalair-Garrett, Ltd., Yeovil, Somerset, England). *Aircraft Engineering*, vol. 54, Jan. 1982, p. 8-13.

The ion exchange properties that allow zeolite crystals to act as molecular sieves in industrial oxygen-enrichment processes are applied to the construction of an electronically-controlled, on-board oxygen generating system (OBOGS) for military aircraft. Such a system offers unlimited flight time capability, and the elimination of the fire and explosion hazards posed by conventional liquid oxygen life support systems. The molecular sieve oxygen generator (MSOG) supplies oxygen to pilot gas masks at 50-60% concentration, employing microprocessor control valve settings for the triple-molecular sieve beds. System schematics are provided. O.C.

**A82-23400** **Comparison of some technical methods for the evaluation of whole-body vibration.** J.-E. Hansson and B.-O. Wikström (National Board of Occupational Safety and Health, Solna, Sweden). *Ergonomics*, vol. 24, Dec. 1981, p. 953-963. 17 refs.

Physical measurements of vibrations transmitted through the driver's seat to operators of off-road forestry machines are compared with the driver's subjective evaluation of discomfort from vibration in different driving situations. A total of 13 different vibration analysis methods were considered. The investigation consisted of seven studies. The machines were driven on five test tracks, each consisting of six to ten shorter intervals representing easy to moderately difficult terrain conditions. Subjective ratings correlated better with technical evaluations based on the two most dominant vibration directions or all three directions than with only the critical direction. Calculations based on vibration energy in the entire frequency range 1-80 Hz gave better correlation than calculations based on energy in the critical frequency band. The weighted sum of vector method gave the best correlation with subjective ratings. The correlation coefficient for this method was 1-3-octave-band in the critical direction and frequency. (Author)

**A82-23643** † **The statistical structure of EEG rhythm interaction and individual features of brain autoregulation mechanisms (Statisticheskaia struktura vzaimodeistviia ritmov EEG i individual'nye svoistva mekhanizmov samoreguliatsii mozga).** S. I. Soroko and S. S. Bekshaev (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Dec. 1981, p. 1765-1773. 20 refs. In Russian.

An analysis is presented of the statistical characteristics of the time sequence of EEG rhythm variations in different individuals during different mental functions, and their relation to individual characteristics of brain autoregulation mechanisms. Matrices of brain wave transition probabilities were derived from EEGs recorded in 183 healthy subjects at rest with eyes open and closed and during the performance of mental and visual tracking tasks, and compared with the results of tests measuring individual neurodynamic flexibility. The EEG patterns of persons with a high level of neural flexibility are found to be characterized by a functional nucleus, being a dominant rhythm as judged by the number of its connections which acts to stabilize the pattern, in the region of the alpha wave. The functional nucleus is absent in persons with a low degree of nervous system flexibility, and EEG component interactions are equally probable. Changes in brain functions are accompanied by the establishment of new EEG patterns through an intermediary stage also characterized by equally probable interactions. A.L.W.

**A82-23646** † **The effects of serotonin on shivering thermogenesis (Vliianie serotonina na sokratitel'nyi termogenez).** N. N. Kudriavtseva (Akademiia Nauk SSSR, Institut Tsitologii i Genetiki, Novosibirsk, USSR) and M. A. Iakimenko (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Dec. 1981, p. 1862-1865. 9 refs. In Russian.

The role of serotonin in thermoregulatory mechanisms is investigated in a study of shivering thermogenesis in ground squirrels during arousal from hibernation. The intraperitoneal injection of serotonin (10mg/kg) is observed to decrease body temperature in alert squirrels, and prolong the regaining of body heat and muscular electrical activity during arousal from hibernation. The observed inhibition of muscle contractions and thereby heat generation due to serotonin is noted to be twice as great as that induced by the serotonin precursor 5-hydroxytryptophan, indicating that serotonin synthesized during warming was the source of the hypothermic effect. A.L.W.

**A82-23647** † **Seasonal differences in the adaptive changes of the thermal effect of muscle contraction (Sezonnye razlichiia adaptatsionnykh sdvigov teplovogo effekta myshechnogo sokrashcheniia).** L. D. Pchelenko (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad; Syktyvkarskii Gosudarstvennyi Universitet, Syktyvkar, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 67, Dec. 1981, p. 1879-1882. 13 refs. In Russian.

The thermal effects of shivering in cold-adapted animals exposed to cold at different seasons of the year are compared. Electrothermometric measurements were made of heat production in a single contraction of diaphragms at 37 C isolated from rats adapted to cold in the spring and summer. In comparison to spring and summer controls, cold-adapted rat muscle showed a 12% increase in heat produced for the same muscle tension in the summer, and a 54% increase in the spring. Similarly, the calorigenic effect of noradrenalin was 36% in the summer group, and 66% in the spring group. It is concluded that cold adaptation during the first month of the spring is more effective with respect to additional heat production during muscle contraction, than summer adaptation, and thus the degree of lowering of muscular efficiency in cold adaptation may be regulated. A.L.W.

**A82-23769** # **Biolpgical effects of space travel /The W. Rupert Turnbull Lecture/.** K. E. Money (Defence and Civil Institute of Environmental Medicine, Downsview, Ontario, Canada). *(Canadian Aeronautics and Space Institute, Annual General Meeting, Montreal, Canada, May 11, 1981.) Canadian Aeronautics and Space Journal,* vol. 27, 3rd Quarter, 1981, p. 195-201. 21 refs.

Prominent human biological problems related to the microgravity environment of space are discussed. The onset of puffy faces and bird legs occurs as a shift in bodily fluids from the lower to upper extremities, and accompanies an up to 12% loss in bodily fluids through urination. The bird legs condition is exacerbated by atrophication due to disuse and can be corrected by exercise. Cardiovascular decompensation is an excessive return of blood volume to the legs after landing, and disappears after several days. Bone demineralization is observed mainly in the feet, at a rate of 100 mg Ca/day, does not display a plateau effect, and, in the case of Skylab crewmembers, will not be totally regenerated after return to earth. Motion sickness is caused by sensory overloads to the vestibular apparatus, a condition which the brain interprets as an ingestion of poison, the remedy to which is vomiting. M.S.K.

**A82-22981** * # **Atmospheres and evolution.** L. Margulis (Boston University, Boston, MA) and J. E. Lovelock (Reading, University, Reading, Berks., England). In: Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979. Cambridge, MA, MIT Press, 1981, p. 79-100. 24 refs. Research supported by Boston University and Guggenheim Foundation; Grant No. NGR-22-004-025.

Studies concerning the regulation of the earth atmosphere and the relation of atmospheric changes to the evolution of microbial life are reviewed. The improbable nature of the composition of the earth atmosphere in light of the atmospheric compositions of Mars and Venus and equilibrium considerations is pointed out, and evidence for the existence of microbial (procaryotic) life on earth as far back as 3.5 billion years ago is presented. The emergence of eucaryotic life in the Phanerozoic due to evolving symbioses between different procaryotic species is discussed with examples given of present-day symbiotic relationships between bacteria and eucaryotes. The idea that atmospheric gases are kept in balance mainly by the actions of bacterial cells is then considered, and it is argued that species diversity is necessary for the maintenance and origin of life on earth in its present form. A.L.W.

**A82-24030** **The effect of prolonged practice of pursuit eye movement.** H. Wallach (Swarthmore College, Swarthmore, PA), P. Schulman (New York, State University, Utica, NY), and A. O'Leary (Pennsylvania, University, Philadelphia, PA). *Perception and Psychophysics,* vol. 30, no. 6, Dec. 1981, p. 533-539. Grant No. PHS-11089.

Prolonged exposure to reciprocating motion that is tracked by the eyes results in diminished extent of perceived motion. Investigation of this effect showed that it becomes manifest only in perceived motion that is caused by ocular pursuit, but that it is not an eye muscle effect. It may consist in a changed evaluation of eye movements. The results throw some light on the relations between the processes that are caused by different stimuli for motion. (Author)

**A82-24031** **The latency of circular vection during different accelerations of the optokinetic stimulus.** G. A. Melcher and V. Henn (Zürich, Universität, Zurich, Switzerland). *Perception and Psychophysics,* vol. 30, no. 6, Dec. 1981, p. 552-556. 12 refs.

Subjects were seated inside a full-field optokinetic cylinder which was accelerated at values between .1 and 100 deg per sec. Subjects indicated when motion was first detected. Latency for onset of self-motion shows a minimum of around 5 deg per sec and increases for lower and faster accelerations of the visual surround. In the low acceleration range, up to 5 deg per sec, all movement is perceived as circular vection, that is, self-rotation. With higher accelerations, motion of the visual surround is perceived initially; over seconds, this gradually transforms to circular vection. Velocity estimation during low acceleration is better than during comparable vestibular acceleration. During subject rotation in the light, that is, when both the visual and vestibular inputs combine to generate a velocity signal, detection of motion has the shortest latency and represents actual velocity over a wider range than it does with each stimulus alone. (Author)

**A82-24032** **Individual differences in pulse brightness perception.** R. W. Bowen, K. A. Markell (Loyola University, Chicago, IL), R. Sekuler, and C. J. Owsley (Northwestern University, Evanston, IL). *Perception and Psychophysics,* vol. 30, no. 6, Dec. 1981, p. 587-593. 18 refs. NSF Grant No. BNS-78-17779; Grants No. AF-AFOSR-80-0246; No. NIH-AG-01251.

The origins of individual differences in susceptibilities to the Broca-Sulzer effect, upon which a pulse of light of duration 50-150 msec appears brighter than longer or shorter pulses, are investigated. Observers were first classified as Type A (experiencing brightness enhancement for pulses with simultaneous onset and offset with respect to comparison pulses), B (experiencing brightness enhancement for simultaneous offset conditions only) and C (not perceiving brightness enhancement under any conditions), then tested for abilities in brightness estimation, modulation sensitivity to full-field sinusoidal flicker and contrast sensitivity for moving sinusoidal gratings. Differences in observer class are found to be reflected in differences in magnitude estimation, however are not related to flicker and motion sensitivity. It is thus concluded that the three classes of observer differ in the perceptual criteria used in judging the brightness of individual light pulses, rather than in underlying neurophysiological responses. A.L.W.

Criteria for the quantitative evaluation of the tolerance of a given individual to external disturbing factors during the performance of athletic activities are discussed on the basis of experiments performed on mountain climbers. Evaluations of subject task performance quality were made under natural and laboratory conditions in the presence and absence of distractions represented by the possibility of falling in the first case and electrical stimulation of the skin in the second. The measures of work effectiveness are found to decrease by a factor of two in the presence of disturbances in those subjects preliminarily classified as disturbance intolerant, and remain the same or even increase in those labelled tolerant. Results thus demonstrate changes in work effectiveness to be a reliable indicator of disturbance tolerance in athletes. A.L.W.

Plismane, and K. E. Strelis (Latviiski Nauchno-Issledovatel'skii Institut Eksperimental'noi i Klinicheskoi Meditsiny; Gosudarstvennyi Politekhnicheskii Institut, Riga, Latvian SSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Oct. 1981, p. 27-29. 8 refs. In Russian.

Changes in blood supply to the extremities with the process of adaptation to physical training are investigated in female athletes. Blood flow in the forearm and calf and arterial pressure were monitored in untrained female students and female athletes before, during and after bicycle ergometer exercise. Data reveal a close agreement between cardiac function and volume blood flow rate in the working and nonworking extremities during rest and submaximal exercises, indicative of regulation by the same mechanism, most likely sympathetic activation. Such a mechanism, occurring to a greater extent in women than in men and acting to induce vascular contraction in both working and nonworking muscles, may explain the observed reduction in the work capacities and endurance of women with respect to men. A comparative analysis is made of indices of humoral and cellular immunity and of certain factors of natural resistance. Here, blood is taken simultaneously from a vein, earlobe, and finger of each athlete in the study. It is established that blood from any one of these sources is satisfactory for purposes of study. A qualitative evaluation of T and B lymphocytes is necessary only for blood taken from a vein. C.R.

The actual diets and energy expenditures of operators are studied along with components of protein, lipid and vitamin metabolism and cardiovascular and nervous system conditions. Time studies and gas exchange measurements indicate a daily energy expenditure of 2724 kcal in power station control panel operators and railroad dispatchers, which is taken to indicate a caloric requirement of 3000 kcal/day. The actual diets of the operators are found to correspond with their net caloric requirements, however contain less than the recommended amounts of animal proteins, vegetable oils, vitamins A and C and calcium. The performance of operator functions is observed to lead, by the end of the work shift, to significant decreases in operative memory and attention, and increases in visual-motor reaction time. Disorders in lipid and vitamin C metabolism are also found. A.L.W.

The use of echocardiography for the detection of disorders of coronary circulation in the left ventricle during graded physical exercise is investigated. Echocardiograms and electrocardiograms were recorded simultaneously in normal subjects and in patients suffering from chronic ischemic heart disease and/or hypertension during and following submaximal, step-wise increasing exercise on a bicycle ergometer. Comparison of the data reveals signs of coronary blood supply disturbances to be apparent at lower exercise levels in the echocardiographic recordings of persons with ischemic heart disease. A tendency towards different types of changes in the functional condition of different parts of the myocardium in the presence of S-T segment depression in hypertensives and patients with ischemia suggests that the depression is caused by transient localized myocardial ischemia rather than systolic overloading of the left ventricle. The construction of artificial membrane structures for the study of the complex processes occurring in biological membranes (membrane modeling) is discussed along with the area of endeavor seeking to alter living membranes so as to affect various levels of cellular behavior. Following a brief review of membrane structure as related to the properties of the phospholipids comprising them, attention is given to the formation of membrane structures in phospholipid solutions, particularly liposomes, consisting of a series of concentric lipid bilayers or a single bilayer. Proteolipsomes, derived by the introduction of proteins are then discussed as models of cellular membranes used in studies of membrane permeability to ions and molecules, and membrane absorption, endocytosis, fusion and lipid transfer upon interactions with cells. Liposome-cellular interactions provide a basis for membrane engineering, the changing of cell properties by the incorporation of foreign substances. Problems and potential applications for the use of liposomes to treat various conditions in the whole organism are also considered. A.L.W.

Individual differences in the volumes of brain structures connected with visual functions are investigated as indicators of human visual characteristics. Volumes of the lateral geniculate body on the subcortical level and field 17 (the area striata) on the cortical level were determined in 45 adult human brain hemispheres. Total volumes of the lateral genicular body and field 17 and grey matter

**volumes of the lateral geniculate body are obtained which vary by factors of 2 to 3, significantly more than the total brain mass variation. Results may be interpreted as a neuromorphological basis for the observed variation in visual characteristics between individuals and its genetic predeterminacy.** A.L.W.

**A82-24501 † The functional state of the segmental apparatus of the spinal cord in humans during local work after a short period of rest (Funktsional'noe sostoianie segmentarnogo apparata spinnogo mozga cheloveka pri lokal'noi rabote posle sokrashchennogo otdykha).** V. R. Kuchma (I Moskovskii Meditsinskii Institut, Moscow, USSR). *Gigiena Truda i Professional'nye Zabolevaniia,* Dec. 1981, p. 35-39. 16 refs. In Russian.

The excitability of spinal motoneurons and the state of the inhibitory systems of the spinal cord during tiresome local work carried out with 50, 30, and 20% of maximum operating force after varying periods of rest are examined. It is found that shortening the rest period does not affect the dynamics of the indices characterizing the functional state of the segmental apparatus during subsequent work. It is also established that, with a shortened rest period, the changes in the functional indices at the moment of 'refusal' become more pronounced; there are higher levels of spinal motoneuron reflector excitability and a greater suppression of the spinal cord's inhibitory systems during repetitive exertions not preceded by a rest. In Russian.

Criteria for the differential diagnosis of vascular impairments of vibrational and nonvibrational origins are evaluated based on the dynamic characteristics of vascular responses. Together with usual clinical tests and examinations, a series of specially designed tests including a cold test, an arm raising and lowering test, reactive hyperemia, ischemization of the extremities and local vibration were performed on healthy subjects, and patients with autonomic-vascular dysfunctions, Raynaud's disease and syndrome, polyneuropathies and vibration sickness from the effects of whole-body and local vibration. The continuous recording of forearm rheograms during the cold test, in which subjects immersed their hands in 0 C water, is found to allow dynamic vascular responses to be observed and classified as either normal, distonic hyporeactive, primarily vasospastic and secondarily vasospastic. The latter two types of responses, within the context of the clinical picture, appear to be associated preferentially with vibration-induced impairments, and may thus be used as evidence of a vibrational origin. P. Syromiatnikov (Moskovskii Nauchno-Issledovatel'skii Institut Gigieny, Moscow, USSR). *Gigiena Truda i Professional'nye Zabolevaniia,* Aug. 1981, p. 1-4. 12 refs. In Russian.

The information content of various nonspecific clinical signs and diagnosis probability in the detection of noise sickness are examined. Statistical analysis is applied to data concerning the prevalence of reductions in auditory sensitivity, headaches, dizziness, irritability, insomnia, motion discomfort, general hyperhydrosis, changes in skin temperature topography, arterial pressure asymmetry, reduced vibration sensitivity, vestibular sensibilization and hypothalamic dysfunction in patients with varying degrees of noise pathology. The initial stages of noise sickness are found to be polysyndromic, characterized by signs of neurasthenia and disturbances in autonomic and somatic nervous function. These signs often have a scintillating character, and often disappear after rest. The more severe stages of the sickness are accompanied by progressive deafness, increasing blunting of vibration sensitivity, subjective and nervous signs of a more stable nature and signs of hypothalamic dysfunction. A.L.W.

**A82-24516 † Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating (Morfofunktsional'nye izmeneniia miokarda u krolikov pri khronicheskom solnechno-teplovom peregrevanii).** A. A. Abdyldaev and K. S. Mustafin (Dzhalal-Abadskaia Gorodskaia Bol'nitsa, Dzhalal Abad, Kirgiz SSR). *Zdravookhranenie Kirgizii,* Mar.-Apr. 1981, p. 27-30. In Russian.

Functional, histological and morphological changes in the myocardium under conditions of overheating are investigated in relation to the stage of overheating in the rabbit. Experiments were performed on animals undergoing 60 days of solar heating to produce body temperatures of 40-40.5 and 42-42.5 C. Significant changes in electrocardiogram patterns are observed in both groups of animals which correspond to a focal or diffuse myocardial hypoxia following 60 days of exposure. Reductions in the weight percent of the right ventricle, the ventricular index and the weight percent of the left ventricle with respect to controls are found in the experimental animals and attributed to an impairment in electrolyte metabolism. Histological examinations reveal the presence of micronecrosis and cardiosclerosis the extent of which depends on the length and intensity of exposure. A.L.W.

**A82-24517 † Evaluation of the effectiveness of the complex treatment of patients with ischemic heart disease by the bicycle ergometer method (Otsenka effektivnosti kompleksnogo lecheniia bol'nykh iskhemicheskoi bolezn'iu serdtsa metodom veloergometrii).** Sh. The simultaneous recording of bulk and differential rheograms is used for the phase analysis of peripheral systemic circulation. The bulk rheogram, its first derivative and the lateral pressure curve in the femoral artery were recorded simultaneously with electrocardiograms or instantaneous blood flow rates in the femoral arteries of dogs. It is found that the combined analysis of bulk and differential rheograms allows the initial point of rheogram rise, the completion of the fast filling phase, the phase of maximal filling and the end points of the fast and slow phases of arterial flow and the venous flow phase to be distinguished. **A82-24525 † Circadian and seasonal rhythms in plasma androgen levels in the rhesus macaque monkey (Tsirkadnye i sezonnye ritmy soderzhaniia androgenov v plazme krovi obez'ian makak rezusov).** N. P. Goncharov, D. S. Tavadian, and V. I. Vorontsov (Akademiia Meditsinskikh Nauk SSSR, Sukhumi, Georgian SSR). *Problemy Endokrinologii,* vol. 27, Nov.-Dec. 1981, p. 53-57. 17 refs. In Russian.

**A82-24526 † Intellection and emotions (Myslitel'naia deiatel'nost' i emotsii).** V. E. Klochko and S. M. Dzhakupov. *Voprosy Psikhologii,* May-June 1981, p. 169-171. In Russian.

A monograph on this subject by Vasil'ev et al. (1980) is reviewed. It is noted that certain fundamental conceptions in psychology have prevented investigators from considering the relationship between the emotional and intellectual components of thinking as a topic worthy of serious study. The authors of the monograph see the emotions as forming an internal condition, and therefore playing an important role, in intellection. On the basis of Leont'ev's notion of activity as a system having its own structure, internal transitions, and development, the authors seek to lay the foundation for a systems approach. Such an approach, it is noted, would make it possible to investigate the principles governing the inception and operation of emotional phenomena during intellection. C.R.

**A82-24527 † A device for laboratory investigations of**

**technical-diagnostic activity (Ustroistvo dlia laboratornogo issledovaniia tekhniko-diagnosticheskoi deiatel'nosti).** A. F. Anufriev. *Voprosy Psikhologii,* Sept.-Oct. 1981, p. 143-145. 5 refs. In Russian.

A device is described for investigating, under laboratory conditions, the way in which workers analyze problems encountered in the production of timepieces. Just as on the shop floor, the device makes it possible to verify an analysis in two ways: either by examining the element suspected of causing the problem or by checking the quality of parts produced after the suspected element is replaced. C.R.

**A82-24528 † Establishing methods of investigating individual characteristics of making decisions in situations of conflict (K obosnovaniiu metodiki issledovaniia individual'nykh osobennostei priniatiia reshenii v konfliktnykh situatsiiakh).** A. N. Kovalev. *Voprosy Psikhologii,* July-Aug. 1981, p. 127-131. 12 refs. In Russian.

It is noted that the technical means at man's disposal for executing decisions far exceed his ability to arrive at decisions in a timely and judicious manner. It is thought that mathematical methods and computers may be useful in studying the way in which decisions are made under various circumstances, including those of conflict. The mathematical theory of games, however, either ignores individual psychological factors altogether or else treats them in a general way. The experiment described here is based on a game played with a computer that can act as either a friend or enemy. The program permits an analysis of individual responses to situations of conflict. C.R.

**A82-24529 † Psychophysiological characteristics of the fatigue state based on activation indicators (Psikhofiziologicheskaia kharakteristika sostoianiia utomleniia na osnove pokazatelei aktivatsii).** G. A. Striukov (Gor'kovskii Gosudarstvennyi Universitet, Gorki, USSR), O. A. Konopkin (Akademiia Pedagogicheskikh Nauk SSSR, Moscow, USSR), and T. N. Dolgolenko. *Voprosy Psikhologii,* May-June 1981, p. 38-48. 22 refs. In Russian.

**A82-24530 † A mediation method for solving problems of 'quick-wittedness' (O sposobe oposredstvovaniia pesheniia zadach na 'soobrazhenie').** B. D. El'konin. *Voprosy Psikhologii,* Jan.-Feb. 1981, p. 110-118. 17 refs. In Russian.

The possibility of transition from immediate to mediated solving of quick-wittedness problems is considered. Mediation here is defined as the mediation of the transition between the conditions and goal of the problem. The object where this transition occurs represents the content of the orienting activity in the solving of quick-wittedness problems. It is shown that this object can be constructed only when the trajectory of operations required by the problem can be represented as an entity to be transformed. In this case, the data appear not as a set of separate cues for required operations but as an object, different transformations of which afford different trajectories of the required operation. B.J.

**A82-24531 † The relationship between the individual properties of a human operator and work efficiency and tolerance to the monotony of work (Sviaz' individual'nykh svoistv cheloveka-operatora s produktivnost'iu deiatel'nosti i ustoichivost'iu k vliianiiu faktora monotonnosti truda).** Iu. V. Bushov and Iu. A. Riabchuk (Tomskii Gosudarstvennyi Universitet, Tomsk, USSR). *Voprosy Psikhologii,* Jan.-Feb. 1982, p. 126-130. 15 refs. In Russian.

**A82-24532 † Human predictive ability in univocally determined situations for normal and pathological states (Prognosticheskaia geiatel'nost' cheloveka v odnoznachno-determinirovannykh sredakh v norme i patologii).** A. Iu. Akopov (Psikhonevrologicheskii Dispanser, Leningrad, USSR) and F. I. Sluchevskii (Leningradskii Gosudarstvennyi Meditsinskii Institut, Leningrad, USSR). *Voprosy Psikhologii,* May-June 1981, p. 119-123. 7 refs. In Russian.

**A82-24533 † The dependence of the strategy by which a solution is sought on the type of intellection (Zavisimost' strategii poiska resheniia ot tipa myshleniia).** V. S. Goncharov. *Voprosy Psikhologii,* July-Aug. 1981, p. 132-136. 11 refs. In Russian.

The investigation is carried out in two stages. First the type of intellection is determined, then the game method is used in studying the features characterizing the search for a solution. The two types of intellection - theoretical and empirical - derive from research done by Davydov (1972). The three components of theoretical intellection are analysis, reflection, and an internal plan of action. It is shown that theoretical and empirical ways of thinking lead to different ways of pursuing solutions. The three components of the theoretical type are shown to have a marked effect on the way a solution is sought. C.R.

**A82-24534 † Determination of oxygen content in air on the basis of meterological parameters /pressure, temperature, and moisture/ in order to predict the hypoxic effect of the atmosphere (Opredelenie soderzhaniia kisloroda v atmosfernom vozdukhe na osnove meteorologicheskikh parametrov /davleniia, temperatury, vlazhnosti/ s tsel'iu prognozirovaniia gipoksicheskogo effekta atmosfery).** V. F. Oucharova (Tsentral'nyi Nauchno-Issledovatel'skii Institut Kurortologii i Fizioterapii, Moscow, USSR). *Voprosy Kurortologii, Fizioterapii i Lechebnoi Fizicheskoi Kul'tury,* Mar.-Apr. 1981, p. 29-34. In Russian.

**A82-24535 † Features of biorhythms for patients with chronic nonspecific pulmonary diseases during adaptation to the climato-geographic conditions of the Crimea (Osobennosti biologicheskikh ritmov u bol'nykh s khronicheskimi nespetsificheskimi zabolevaniiami legkikh v protsesse adaptatsii k klimatogeograficheskim usloviiam Kryma).** V. P. Piatkin, G. E. Butenko, V. L. Semenov, N. F. Kostin, and R. V. In Russian.

**A82-24536 † Chronobiological aspects in the science of health resorts and physiotherapy (Khronobiologicheskie aspekty v kurortologii i fizioterapii).** I. E. Oranskii (Sverdlovskii Institut Kurortologii i Fizioterapii, Sverdlovsk, USSR). *Voprosy Kurortologii, Fizioterapii i Lechebnoi Fizicheskoi Kul'tury,* Nov.-Dec. 1981, p. 1-5. In Russian.

Implications of biological rhythms for physiotherapy and treatments at health resorts are discussed. The temporal characteristics of various physiological parameters in healthy and ill persons are outlined and the potential role of physiotherapy in the restoration of biological rhythms disrupted by disease and in the facilitation of adaptation processes is pointed out. Differences in the dynamics of the rhythms of different functions and the indeterminacy of their responses to effecting factors are discussed in light of experiments on nitroglycerin electrophoresis in patients with chronic ischemic heart disease. It is noted that the chronobiological approach is important not only for the study of the mechanisms of the adaptive effects of physical therapy, but has great practical significance, particularly in the development of treatment schedules, the seasonal prevention and treatment of illness and the readjustment of physiological functions following travel between time zones. A.L.W.

**A82-24537 † Individual variability in reaction norms and population adaptation (Individual'naia izmenchivost' normy reaktsii i adaptatsiia populiatsii).** A. S. Severtsov and G. S. Surova (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Zhurnal Obshchei Biologii,* vol. 42, Mar.-Apr. 1981, p. 181-192. 22 refs. In Russian.

The variability of the reaction norms of individuals and populations under various environmental circumstances is investigated based on studies of growth rate in Rana temporaria tadpoles. Individuals were grown from eggs under different conditions of temperature, illumination and population composition, and body size and degree of development were analyzed to determine the heritability of the growth rate characteristic. The individual variations observed are accounted for by individual ranges of the reaction norms and the deviation of the mean individual norm from that of the population. The wide range of reaction norms within the population thus reflects its genotypic heterogeneity. The plasticity of the characteristic is considered to ensure the adaptability of the peak and side groups in the growth rate distribution, while the width of the norm ensures the ecological and evolutionary plasticity of the population as a whole. A.L.W.

**A82-24544** † **The effects of noise on the physiological condition of blood leucocytes (Vliianie shuma na funktsional'noe sostoianie leikotsitov krovi).** O. P. Lomov and E. V. Tatarinova. *Gigiena i Sanitariia,* Dec. 1981, p. 22-24. 14 refs. In Russian.

The phagocytic activities and glycogen contents of blood leucocytes of persons exposed to various noise levels are studied. Exposure to noise at an equivalent sound level of 95 dBA is found to be accompanied by significant increases in phagocytic number and phagocytic index 4 h after noise exposure, but sharp reductions in leucocyte phagocytic activity and a marked tendency towards reduced neutrophil glycogen saturation on the fifth day of exposure, indicative of a serious reduction in immunobiological potential. In contrast, prolonged exposure to noise at 80 dBA leads to an elevation in immunobiological reactiveness in 30 days after an insignificant initial decline. Correlation analysis of the numbers of segmented neutrophils, the phagocytic index and number, and the mean cytochemical glycogen coefficient suggests that the number of blood leucocytes is determined by their physiological condition.

**A82-24545** † **The role of multiple recording devices in the complex equipping of functional-diagnostic facilities (Rol' poligrafov v kompleksnom osnashchenii otdelenii funktsional'noi diagnostiki).** A. G. Tishchenko and L. A. Shuster (Nauchno-Proizvodstvennoe Ob'edinenie Radioelektronnoi Meditsinskoi Apparatury, Lvov, Ukrainian SSR). *Meditsinskaia Tekhnika,* Jan.-Feb. 1981, p. 44-46. 6 refs. In Russian.

A description is given of multiple recording devices: four, six, and eight channel multifunctional diagnostic complexes. The devices provide for the following types of diagnostic recordings: EKG, echo cardiography, sphygmography, EEG, thoracoscopy, and recording of the skin galvanic response. B.J.

**A82-24546** † **A complex of instruments for psychophysiological studies (Kompleks priborov dlia psikhofiziologicheskikh issledovanii).** A. I. Vishniakov and E. V. Matveev (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Meditsinskogo Priborostroeniia, Moscow, USSR). *Meditsinskaia Tekhnika,* Jan.-Feb. 1981, p. 14-17. 5 refs. In Russian.

The PFK-01 instrument complex has been developed for the more efficient practical application of psychophysiological examination methods in a network of therapeutic-prophylactic and polyclinical establishments. The complex is based on a programmable keyboard computer and is used to process data obtained by 12 psychophysiological methods. A block diagram of the complex is presented. B.J.

**A82-24547** † **Combined rehabilitative and therapeutic measures in space medicine (Kompleksnye vosstanovitel'no-lechebnye meropriiatiia v kosmicheskoi meditsine).** T. N. Krupina, A. V. Beregovkin, V. M. Bogoliubov, B. M. Fedorov, A. D. Egorov, A. Ia. Tizul, V. V. Bogomolov, V. V. Kalinichenko, A. P. Ragulin, and V. A. Stepin. *Sovetskaia Meditsina,* no. 12, 1981, p. 3-8. 13 refs. In Russian.

Means and methods developed for the treatment of physiological disorders induced by extended space flights are discussed. The procedures were formulated on the basis of ground-based experiments on antiorthostatic hypokinesia for periods of 49 and 182 days, and experience with the treatment of cosmonauts following space flights of 140- and 175-day durations. Taking into account the etiopathological characteristics of the disorders encountered, the rehabilitative process is founded primarily on functional therapy, including therapeutic physical exercises, massage, dosed walking, physical training and balneological and thermal procedures. These procedures are employed differentially, first in the mild, then in the mild-training and training stages of the rehabilitative process in combination with rational psychotherapy. A.L.W.

**A82-24548** † **Application of electrogustometry for the evaluation of adrenal functional conditions (Primenenie elektrogustometrii dlia otsenki funktsional'nogo sostoianiia nadpochechnikov).** E. Sh. Khalfen and A. D. Triapyshko (Saratovskii Meditsinskii Institut, Saratov, USSR). *Kazanskii Meditsinskii Zhurnal,* vol. 62, Sept.-Oct. 1981, p. 34-36. In Russian.

The use of electrogustometry, whereby gustatory sensations are induced by the passage of a constant electric current from the tip of the tongue to the right arm, for the detection of adrenal insufficiency is studied. Measurements of the applied current at which the gustatory sensation disappears were made in 400 healthy persons and 270 patients with an apparatus employing a circuit voltage of 4.5 V and additional resistance of 100 kiloohms. Moderate decreases in critical current were found in 18 and sharp decreases in 25 of the patients in comparison with the healthy subjects and remaining patients. Analysis of blood glucose levels, levels of sodium and potassium in the saliva and blood serum and 17-ketosteroid excretion reveal all patients exhibiting low electrogustometric indicators to have signs of secondary adrenal insufficiency, although not all patients testing normal are without it. Results thus indicate that electrogustometry may be used as a simple preliminary method for the detection of adrenal insufficiency. A.L.W.

**A82-24549** † **Morphometric analysis of ultrastructural changes in the skeletal muscles during physical exercise in acute and chronic experiments (Morfometricheskii analiz ul'trastrukturnykh sdvigov v skeletnykh myshtsakh pri fizicheskikh nagruzkakh v ostrom i khronicheskom eksperimente).** M. D. Shmerling, E. E. Filiushina, and I. I. Buzueva (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR). *Akademiia Nauk SSSR, Sibirskoe Otdelenie, Izvestiia, Seriia Biologicheskikh Nauk,* Apr. 1981, p. 124-130. 20 refs. In Russian.

Changes in the morphologies of the subcellular components of skeletal muscle cells as a result of physical exercise of various durations and intensities are investigated in rats undergoing daily treadmill running to exhaustion for three days and physical exercise of increasing intensity over the course of 40 days. Electron microscopic examination of the tibialis anterior muscle following maximal exercise reveals ultrastructural changes in the morphometric characteristics of the sarcoplasmic reticulum and glycogen stores reflecting the sudden mobilization and exhaustion of intracellular reserves. The white, fast-twitch muscle fibers are observed to be more sensitive to these effects than the red, slow-twitch fibers. Prolonged physical exercise, on the other hand, is observed to produce, particularly in the red muscle fibers, ultrastructural changes in sarcoplasmic reticulum, mitochondria and glycogen stores character-

istic of elevated muscular work capacity and fatigue tolerance.

**A82-24551 † Mechanism of the effects of vacuum on microorganisms (O mekhanizme deistviia vakuuma na mikroorganizmy).** A. A. Imshenetskii, S. V. Lysenko, N. F. Pisarenko, and N. L. Velikanov (Akademiia Nauk SSSR, Institut Mikrobiologii, Moscow, USSR). *Mikrobiologiia,* vol. 50, Sept.-Oct. 1981, p. 786-791. In Russian.

The mechanisms for the effects of high vacuum on vacuum-tolerant and vacuum-intolerant microorganisms are investigated in light of the importance of the vacuum environment for the space transport of microbial life forms. Experiments involved the exposure of preliminarily desiccated and moist bacterial (Mycobacterium luteum, Serratia marescens) and yeast (Endomyces magnusii) cells to a vacuum of 0.00005 torr for 15 and 30 min. The survival rates of both the intolerant (E. magnusii, S. marescens) and tolerant (M. luteum) species are found to be greater when vacuum exposure is preceded by desiccation. Microscopic examination confirms the effects of water in cell destruction, revealing the effects of saturated water vapor and ice crystals in cell expansion and eventual rupture. Dehydration is also shown to play a significant role in cell death.

The mechanism for the observed adjuvant properties of erythrocytes taken from heat-exposed animals is investigated. In a first series of experiments, erythrocytes taken from intact rats were treated with serum taken from rats exposed to daily 40-min intervals at 40 C and injected into syngenic rats together with sheep erythrocytes as antigens. Levels of the immune responses, as indicated by rosetta-cell formation in the spleen and serum antibody-forming cell levels, were increased markedly by the treatment of native erythrocytes with serum from heat-exposed rats. In a second series of experiments, treatment of erythrocytes from heat-exposed rats with serum from intact rats incubated with the polyvalent protease inhibitor trasylol is found to prevent the appearance of the adjuvant properties of the erythrocytes. Results suggest that the modification of erythrocyte surface structures by a serum factor represents a step in the multistage process of immune response stimulation following heat exposure. A.L.W.

**A82-24558 † The biological significance of physiological hypoxemia (O biologicheskom znachenii fiziologicheskoi gipoksemii).** S. I. Frankshtein, Z. N. Sergeeva, and L. N. Sergeeva (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 91, Mar. 1981, p. 263-265. 18 refs. In Russian.

Mechanisms of respiratory control related to blood oxygenation are investigated in studies of the effects of oxygen pre-breathing. Experiments involved the measurement of diaphragm muscular activity in rabbits during the complete obstruction of respiratory pathways. Whereas the breathing of air prior to the closing of the tracheotomy tube is observed to lead to increased breathing muscle activity, oxygen pre-breathing for 1 min prior to closing weakens and slows breathing and suppresses the ventilatory response to airway obstruction. Results indicate that a decrease in the excitability of the respiratory center induced by hyperoxia prevents the reaction of the respiratory center, and suggest changes in blood gases during the obstruction of respiratory pathways. Hypoxemia in the norm is thus concluded not only to play a part in the ventilatory reflex to exercise and increased respiratory resistance, but to induce respiratory discomfort leading to the voluntary enhancement of respiration.

**A82-24559 † Correlation of the stress protective and autonomotropic effects of mebicar (Korreliatsiia stress-protektivnogo i vegetotropnogo deistviia mebikara).** A. V. Bal'dman, I. V. Zaikonnikova, M. M. Kozlovskaia, I. E. Zimakova, M. F. Bravkov, V. P. Poshivalov, and S. V. Kirshin (Akademiia Meditsinskikh Nauk SSSR, Moscow; Kazanskii Meditsinskii Institut, Kazan; I Leningradskii Meditsinskii Institut, Leningrad, USSR). *Farmakologiia i Toksikologiia,* vol. 44, Jan.-Feb. 1981, p. 47-49. 8 refs. In Russian.

The relation of the behavioral effects of the tranquilizer mebicar, a tetra-N-alkyl bicyclic bis-urea derivative, with its effects on the somatic and autonomic manifestations of the stress response are investigated. Measurements of hemodynamic baroreflex and respiratory parameters and behavioral changes were made in cats under acute emotional stress induced by encounter with a dog, and in rats under isolation or immobilization stresses. The administration of mebicar at doses from 100 to 300 mg/kg is observed to inhibit the autonomic components of the acute emotional stress response in cats, including hypertension and degradations in central baroreflex control, accompanied by a reduction in emotional and behavioral responsivity. Equivalent tranquilizing doses in rats normalize disturbances in individual and intraspecies behavior induced by prolonged isolation, and reduce the degree of ulcerous damage to the stomach during immobilization stress. A.L.W.

**A82-24560 † Effects of vitamin P on the enzyme spectrum of the blood serum of irradiated animals (Vliianie vitamina P na fermentnyi spektr syvorotki krovi obluchennykh zhivotnykh).** V. M. Varvashtian, M. A. Orozov, and L. G. Gromova (Akademiia Nauk Kirgizskoi SSR, Institut Organicheskoi Khimii, Frunze, Kirgiz SSR). *Akademiia Nauk Kirgizskoi SSR, Izvestiia,* no. 1, 1981, p. 62, 63. 13 refs. In Russian.

The effects of the daily injection of vitamin P on the serum enzyme concentrations of animals suffering from radiation sickness are investigated. Activities of serum aldolase, aspartate and alanine aminotransferases, and cholinesterase were determined in rats exposed to a single dose of 250 r of X radiation. The resulting radiation sickness is accompanied by 30-60% increases in enzyme activities, with the exception of cholinesterase by the 14th day following irradiation. The administration of daily doses of rutin or a flavonoid preparation isolated from the caper plant is observed to normalize the enzyme levels of irradiated animals without causing hemorrhaging of the internal organs upon dissection. Both preparations are thus concluded to have similer effects in reducing the permeability of vescular walls. A.L.W.

Groos (Leiden, Rijksuniversiteit, Leiden, Netherlands). *Science*, vol. 215, Mar. 12, 1982, p. 1407-1409. 15 refs. Research supported by the Nederlandse Organisatie voor Zuiver Wetenschappelijk Onderzoek; Natural Sciences and Engineering Research Council of Canada Grant No. A-0305.

The integrity of the suprachiasmatic nuclei (SCN) of the hypothalamus is essential to the expression of normal circadian rhythms in rodents. Electrical stimulation of the SCN caused phase shifts and period changes in the freerunning feeding rhythms of rats and activity rhythms of hamsters. The phase response curve for SCN stimulation appears to parallel that for light pulses. These findings strengthen the hypothesis derived from lesion studies that the SCN are the dominant light-entrained oscillators in the rodent circadian system. (Author)

**A82-24800** **Onset and offset of brain events as indices of mental chronometry.** B. Renault, R. Ragot, N. Lesevre, and A. Remond (CNRS, Laboratoire d'Electrophysiologie et de Neurophysiologie Appliquée, Paris, France). *Science*, vol. 215, Mar. 12, 1982, p. 1413-1415. 18 refs.

Analysis of single-trial electroencephalogram waveforms in a reaction time task demonstrated that the onset and offset values of event-related potentials can be used as indices of the duration of information processing. Two negative waves have been identified which peak at different times in different regions of the scalp, with the second overlapping the last part of the first. These waves are related in different ways to the duration of perceptual processing. (Author)

**A82-24823** **Carbon fibre reinforced epoxy prepregs and composites - Health risk aspects.** M. Kowalska (Forsvarets Forskningsanstalt, Stockholm, Sweden). *SAMPE Quarterly*, vol. 13, Jan. 1982, p. 13-19. 39 refs.

It is shown that the primary health risk problem of carbon fiber-reinforced epoxy composite production is, in all production steps, allergic contact dermatitis. The toxicity of the reactive and non-reactive diluents, accelerators, and hardeners is comparatively low, and no cancer risk has been established. In addition, the carbon fibers currently in use are of a larger diameter than would be harmful to the respiratory system. Further toxicity, dermatology and carcinogenic tests are recommended for such chemicals as DDS, TGMDA and BF3-MEA. O.C.

In Russian.

A dynamic systems analysis is presented of EEG patterns during graded mental work represented by a visual signal discrimination task. Experiments were performed on 18 subjects using an automated system for display projection and data recording and processing during a 20-min experimental protocol comprising five phases: rest, reference (task performance without discrimination), rest, mental work (discrimination between two types of bright ring images) and rest. Interval-amplitude analysis of the resulting EEG patterns reveals a significant enhancement in the quantity of theta waves in the vertex and simultaneous decrease in the right occipital region, and an increase in beta activity in both regions during the work phase. A significant reduction in the alpha rhythm is observed during both the reference and the work phases. Finally, in individuals with marked alpha rhythms at rest, a significant correlation is found between the appearance of a stable spindle-shaped alpha rhythm and a reduction in heart rate. A.L.W.

A correlation analysis of cerebrocortical bioelectrical activity is used to investigate the neurophysiological mechanisms of mental activity. EEGs were recorded in 15 subjects before and during the performance of various mental tasks including anagrams, arithmetic problems, logic tests and games, and analyzed by a hierarchical classification algorithm for multi-dimensional EEG time series. The analysis demonstrates changes in the level of bipotential spatial synchronization in the neocortex during mental processes, particularly a decrease in synchronization level following the presentation of instructions and during the resolution of test problems. A relative invariance of spatio-temporal synchronization in biopotentials with respect to selected electrogram parameters is also found. A.L.W.

The current designs, intended uses, methodological principles and typical operational results of portable autonomous devices for the long-term monitoring and correction of various physiological functions in individuals are reviewed. Devices considered include systems providing continuous telemetry or magnetic or digital recording of EKGs and other indicators of cardiovascular system condition, and the recording of EEGs during normal daily activity, which may be used for purposes of diagnosis confirmation, monitoring drug reactions and establishing the magnitudes of exercise. A variety of devices are also available which are capable of signalling the patient of his condition, either according to the results of continuous monitoring of the system in question, or continuous monitoring combined with signalling of functional variations, the signalling of dangerous conditions, or external feedback for the correction and establishment of new motor skills. **sistematizatsii adaptivnykh reaktsii - Na primere antiortostaticheskogo vozdeistviia).** Sh. T. Avetikian, N. N. Vasilevskii, and A. M. Zingerman (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 8, Jan.-Feb. 1982, p. 132-137. 11 refs. In Russian.

An attempt is made to derive a typological classification system expressing individual differences in adaptive responses to physiological stresses as exemplified by the orthostatic effect. Physiological parameters, including heart rate, mean arterial pressure, rheoencephalograms and operator tracking errors, were measured in untrained and experienced subjects while lying in the horizontal and antiorthostatic (-45 deg) positions. Four different classes of response are distinguished on the basis of subject reactivity or areactivity, and the specificity or nonspecificity of the effective reactivity. The different classes are attributed to the interaction of the functional system in question with the nonspecific adaptive response. For the case of the antiorthostatic effect, systemic arterial pressure and heart rate may be used as indicators of nonspecific reactivity, while the dicrotic and diastolic rheoencephalogram indexes may be used to monitor the reactivity of the specific adaptation system. **A82-24836** † **The regulation of body temperature during physical work (O reguliatsii temperatury tela pri fizicheskoi rabote).** S. V. Rodchenkov. *Fiziologiia Cheloveka,* vol. 8, Jan.-Feb. 1982, p. 138-142. 12 refs. In Russian.

The relation of initial body temperature to the rise in core temperature observed during exercise is investigated in humans. Rectal, esophageal, external auditory canal and skin temperatures were measured in six healthy subjects along with oxygen demand and respiratory minute volume and rate before and during 30 and 50% maximal bicycle ergometer exercise preceded or not preceded by 1 hour of bed rest. A horizontal position is found to lead to significant reductions in esophageal temperature, oxygen demand, pulmonary ventilation and heart rate. Despite these differences in initial body temperature and physiological condition, exercise is observed to induce identical increases in esophageal temperature in subjects with lowered and normal body temperature, the increase in body temperature depending only on work intensity. Rectal temperature is found to have a longer response time than esophageal temperature, while external auditory canal responses to exercise were intermediate between those of the core and the skin. A.L.W.

**A82-24837** † **The effects of a flashing light on the spectral composition of brain biopotentials and the biomechanical effectiveness of balancing (Vliianie mel'kaiushchrego sveta na spektral'nyi sostav biopotentsialov mozga i biomekhanicheskuiu effektivnost' ravnovesiia).** E. T. Petrenko (Kazakhskii Institut Fizicheskoi Kul'tury, Alma-Ata, Kazakh SSR). *Fiziologiia Cheloveka,* vol. 8, Jan.-Feb. 1982, p. 143-147. 20 refs. In Russian.

The effects of light flashes of various frequencies on the spectral characteristics and coherence functions of the biopotentials of different regions of the cerebral cortex during the performance of complex equilibrium maneuvers and their biomechanical effectiveness are investigated. Experiments involved the measurement of EEGs along with microdisplacements of the center of gravity and stabillograms in elite gymnasts balancing on the toes of one foot as long as possible in the presence of light flashing at frequencies of from 3 to 25 Hz. Light flashes are observed to reduce the biomechanical effectiveness of the balancing manuever, leading to 50-60% reductions in balancing time and 30-40% increases in stabillogram amplitudes. Changes in EEG patterns corresponding to shifts in the maximum density of the frequency spectrum towards the stimulus frequency, changes in biopotential density and a reduction in their coherence at the flash frequency are also observed. A mechanism involving the disturbance of center of mass correction processes in the peripheral as well as central components of the control system is proposed to account for the effects of low-frequency light interference. A.L.W.

**A82-24838** † **The role of proprioceptive afferentation in maintaining the equilibrium of unstable mechanical systems (Uchastie propriotseptivnoi afferentatsii v podderzhanii ravnovesiia neustoichivoi mekhanicheskoi sistemy).** B. N. Smetanin, M. P. Kudinova, and V. Iu. Shlykov (Akademiia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 8, Jan.-Feb. 1982, p. 148-154. 11 refs. In Russian.

The role of the various forms of proprioceptive sensibility in the regulation of human posture is investigated in an experimental model of the maintenance of upright posture controlled only by foot motions and subject only to proprioceptive afferentation from the feet, legs and vestibular and visual systems. Experiments were performed with an unstable mechanical system consisting of pedals to which are attached a steel bar with a weight on one side, and the subject's foot on the other, forming a single-mass structure with a center of gravity above the single axis of rotation. The temporary ischemic deafferentation of the foot by compression to stop local blood flow is found to affect the accuracy of the balancing task. Information from muscular receptors, however, is found to be more significant for the complex motions providing for the process of searching for the equilibrium zone of the system. It is proposed that this low-threshold afferentation is processed on the supraspinal level. A.L.W.

**A82-24839** # **Exploration of cardiovascular function in subjects exposed to plus Gz accelerations in a human centrifuge by new noninvasive techniques (Esplorazione della funzione cardiocircolatoria di soggetti esposti ad accelerazioni plus Gz in centrifuga umana mediante nuove tecniche incruente).** G. Rotondo (Aeronautica Militare, Servizio di Sanità, Rome, Italy), C. A. Ramacci (Scuola Militare di Sanità Aeronautica, Rome, Italy), G. Meineri (Centro Studi e Ricerche di Medicina Aeronautica e Spaziale, Rome, Italy), G. Calcagnini, A. Ottalevi, G. Germano, A. de Zorzi, and M. Ciavarella. *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 212-229. 28 refs. In Italian.

A noninvasive technique has been developed for use in the monitoring of subject cardiovascular responses to head-foot accelerations in a human centrifuge for purposes of the selection and periodic evaluation of aerospace personnel. The technique involves the simultaneous recording of arterial pressure by a miniaturized, electronic dynamic pressurometer system and of electrocardiographic parameters, including heart rate, by the Holter method with two precordial leads. Results obtained from the monitoring of healthy subjects undergoing plus Gz acceleration at 1.5 increasing to 3.0 g are in agreement with previous observations by conventional means of arterial pressure and heart rate during acceleration, confirming the validity of the present technique. A.L.W.

**A82-24840** # **New ideas on the psychological selection of aircraft pilots (Nuove idee in tema di selezione psicologica del pilota di aereo).** A. F. Sparvieri and G. Ruggieri (Aeronautica Militare, Ufficio del Capo del Corpo Sanitario Aeronautico, Rome, Italy). *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 239-249. In Italian.

A discussion is presented concerning the recent revision of psychological selection criteria for aircraft pilots. The current approach is based on probability profiles and measures of intelligence, rather than aptitude, in order to conform to recent international trends towards the discontinuation of judgements of pilot unfitness on the basis of psychological factors. Changes in regulatory procedures implied by the new criteria are also noted. A.L.W.

**A82-24841** # **Contribution to the history of the theoretical evolution of the psychological selection of aircraft pilots in Italy (Contributo alla storia dell'evoluzione dottrinaria in tema di selezione psicologica del pilota di aereo in Italia).** F. Sparvieri (Aeronautica Militare, Istituto Medico Legale, Rome, Italy). *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 250-280. 32 refs. In Italian.

**A82-24842** # **Old and new directions in the engineering psychology of artificial horizons and their effects on the mental hygiene of the student pilot (Vecchi e nuovi orientamenti in tema di psicotecnica costruttiva dell'orizzonte artificiale e loro riflessi sull'igiene mentale dell'allievo pilota).** F. Sparvieri (Aeronautica Militare, Servizio di Sanità, Rome, Italy). *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 281-289. 10 refs. In Italian.

The development of approaches to the engineering psychology and potential psychological effects of the artificial horizon is outlined. The view of Gemelli (1942) that the use of an artificial horizon would not permit higher mental activity but would constitute only a stimulus for motor reactions is discussed and contrasted with the contemporary opinion that the use of such equipment always permits higher mental activity. A new view of the engineering psychology of the artificial horizon is then formulated in which the information provided is used for position judgment, and means by which this conception may be used to prevent neurotic reactions in the student pilot are considered. A.L.W.

**A82-24843 #** **Hematological and chromosomal analysis of a sample population working at radar installations (Analisi ematologica e cromosomica di una popolazione campione operante in centri radar).** A. Piffanelli, A. Ciaccia, P. Malacarne (Ferrara, Università, Ferrara, Italy), and P. Italiano (Organizzazione Militare Territoriale, Direzione di Sanità, Milan, Italy). *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 290-304. 25 refs. In Italian.

Results are presented of a retrospective hematological and chromosomal study of a sample of workers exposed to radiofrequency radiation at a radar installation of the Italian Air Force. Levels of blood constituents, including reticulocytes, eosinophils, lymphocytes and atypical cells as well as the proportions and types of leucocyte chromosomal aberrations were measured as a function of time exposed to radar in 35 radar controllers and 15 unexposed controls. The results reveal no evidence of a statistically significant change in hematological or karyological characteristics as a result of exposure to radar. A.L.W.

**A82-24844 #** **High altitude and the oxygen dissociation curve of hemoglobin - Modifications in inter-heme cooperativity (L'alta quota e la curva di dissociazione dell'ossigeno dalla emoglobina - Modificazioni nella cooperatività tra gli emi).** P. Ascenzi (Aeronautica Militare, Servizio Sanitario, Rome, Italy) and A. M. Innocenzi (Aeronautica Militare, Servizio Sanitario, Capodichino, Italy). *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 305-318. 33 refs. In Italian.

Mechanisms of adaptation to acute hypoxia are reviewed as regards experimental observations and theoretical bases of changes in oxygen transport properties. Shifts in the hemoglobin oxygen dissociation curve induced by ambient conditions within the erythrocyte are discussed with particular attention given to the allosteric effects of CO2 and 2,3-phosphoglycerate on the oxygen affinity of hemoglobin. The possible adaptive significance of a lowered oxygen affinity as indicated by a shift in dissociation curve position under conditions of acidosis, as observed most markedly in high-altitude natives, is disputed. Modifications in inter-heme cooperativity, as indicated by the shape rather than the position of the oxygenation curve, are then proposed as the physiological basis of changes in oxygen transport properties upon exposure to high altitudes. A.L.W.

**A82-24845 #** **Measurements of tinnitus in transmission and perceptive deafness (Rilievi acufenometrici nelle sordità di trasmissione e di percezione).** S. Bucci, A. di Carlo, M. Saponara, L. Zangrilli, and V. Camarda (Roma, Università; Aeronautica Militare, Istituto Medico Legale, Rome, Italy). *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 319-331. 11 refs. In Italian.

The possible relation between the characteristics of tinnitus and the type of auricular lesion inducing it is investigated. Automatic tinnitometry was used to measure the tone, intensity and harmonic composition of tinnitus accompanying cochlear perceptive deafness, post-cochlear perceptive deafness and transmission deafness. Although no correlation is found between tinnitus characteristics and the site of conductive deafness, spectral properties of the tinnitus in perceptive deafness are found to be closely related to the frequency of the auditory lesion, and distinct from those found in other forms of deafness. A.L.W.

**A82-24846 #** **Man in weightlessness - Physiological problems, clinical aspects, prevention and protection.** H. S. Fuchs. *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 332-346.

Disturbances in human physiology induced by the weightless state in space are discussed, and research on the prevention of the detrimental effects of weightlessness is reviewed. Attention is given to anthropometric changes including loss of body mass, increase in height, and fluid volume shifts, cardiovascular responses, bone demineralization, changes in renal, electrolyte and endocrine functions, decreases in red cell mass, and central nervous system responses affecting sleep patterns, space motion sickness, and the perception of high energy heavy cosmic ray particles. Current research has thus centered on the areas of space motion sickness, cardiovascular deconditioning, bone mineral and muscle losses, red blood cell production and fluid and electrolyte changes. Opportunities for the further study of the physiological effects of weightlessness that will be provided by future Spacelab missions are also noted. A.L.W.

**A82-24847 #** **Factor calculation of the test variables in use by the legal medicine institutes of the Italian Air Force (Calculo fattoriale sulle variabili testologiche in uso presso gli istituti medico legali A.M.).** F. Sparvieri and B. de Rosa (Aeronautica Militare, Istituto Medico Legale, Rome, Italy). *Rivista di Medicina Aeronautica e Spaziale,* vol. 44, July-Dec. 1980, p. 386-391. In Italian.

A factor analysis of variables measured by the Italian Air Force is presented in order to demonstrate the degree of saturation of the Spearman G factor in Air Force testing. The variables considered are the D48, PM38, reaction time and its variability, tachistoscope data, tremometry, and numbers and duration of errors in a muscular coordination test. The low G levels obtained for all variables including D48 and PM38 suggest that G values be determined not from the reasoning tests only, but from the results of all the tests according to a multiple regression model in the prediction of future professional performance. A.L.W.

**A82-24901** **Psychophysical studies of perception and memory (Psikhofizicheskie issledovaniia vospriiatiia i pamiati).** Edited by Iu. M. Zabrodin. Moscow, Izdatel'stvo Nauka, 1981. 216 p. In Russian.

Topics discussed include mathematical models of detection and discrimination in psychophysics, scales of subjective intensity and judgement processes, and a dynamic approach to the analysis of the signal detection process in psychophysics. Also considered are selective visual adaptation, the application of the evoked potential method to psychophysical studies, an experimental study of auditory perception, the stability of a nonthreshold index of sensitivity, and the use of neurophysiological methods to determine operator speed. B.J.

**A82-24902 †** **Problems of the psychic reflection of the properties of the objective world on the sensory-perception level (Problemy psikhicheskogo otrazheniia svoistv ob'ektivnogo mira na sensorno-pertseptivnom urovne).** K. V. Bardin and Iu. M. Zabrodin. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 9-42. 57 refs. In Russian.

A review of the historical development and foundations of psychophysics is presented. Consideration is then given to two basic problems of psychophysics: the discreteness-continuity problem of sensory series, and the problem of the fundamental law of psychophysics (i.e., the Weber-Fechner law). B.J.

**A82-24903 †** **Mathematical models of detection and discrimination (Matematicheskie modeli obnoruzheniie i razlicheniia).** P. Kvaas. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 43-60. 20 refs. In Russian.

A review of mathematical models of detection and discrimination in psychophysics is presented. The detection models considered include the classic threshold model, the Tanner-Swets decision-making model of detection, and Luce's low-threshold detection model. Among the discrimination models considered are Thurstone's model based on the law of comparative judgment, and the theory of the neural quantum. Results of the models are compared with experimental data, and an assessment of the various models is presented. B.J.

**A82-24904 †** **Scales of subjective intensities and judgment processes (Shkaly sub'ektivnykh intensivnostei i protsessy suzhdeniia).** P. Pettsol'd. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 61-69. 7 refs. In Russian.

The paper examines a fundamental problem of psychophysics: the determination of the relationship between the intensity of the stimulus and its subjective impression. Attention is given to such aspects of the problem as the modality-dependence of the exponent in Steven's law, the intramodal dependence of the exponent on the stimulus range, the effect of an aggregate of stimuli, and information integration. As an example, the judgment process as a whole is considered, and sensory transformation is examined as a constituent part of this process. It is found that, within the limits of numerical evaluations, the power law describes well the dependence of subjective intensity on physical intensity. It is noted that various methods lead to various information-processing results, which can be determined by specific laws; and the most important thing is to determine the invariant quantities and the specifying components. B.J.

**A82-24906 † Dynamic approach to the analysis of the signal detection process (Dinamicheskii podkhod k analizu struktury protsessa obnaryzheniia signala).** E. Z. Frishman. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 69-76. 27 refs. In Russian.

The paper examines a dynamic approach in psychophysics, wherein the threshold is taken as the index of subjective activity in the signal detection process. It is found that a lowering of the threshold is determined by an increase in sensory capability and a decrease in the rigor of the detection criterion, whereas a raising of the threshold is associated with the opposite effect: a decrease in sensory capability and an increase in the rigor of the criterion. Particular attention is given to problems of threshold variance. B.J.

**A82-24906 † Selective visual adaptation and the feature model (Selektivnaia zritel'naia adaptatsiia i model' priznaka).** E. N. Dzhafarov and Iu. K. Allik. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 77-92. 36 refs. In Russian.

Problems of visual adaptation are discussed, using as an illustration Blakemore and Campbell's (1969) study on the existence of neurons in the human visual system selectively sensitive to the orientation and size of retinal images. Three types of models for the analysis of adaptation experiments are considered: the realization of reference stimulus-scale value pairs, the adaptation model, and the feature model. Particular consideration is given to figural aftereffects. B.J.

**A82-24907 † Objective sensometrics on the basis of the alpha-rhythm block reaction (Ob'ektivnaia sensometriia po reaktsii blokady al'fa-ritma).** M. B. Mikhalevskaia. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 92-117. 65 refs. In Russian.

The possibility of developing an objective sensometrics on the basis of the alpha-rhythm block (ARB) reaction is examined theoretically and experimentally. The general characteristics of the ARB as an index of sensitivity are considered, with attention given to the functional significance of the ARB and the parameters of an ARB reaction induced by an optical stimulus. An experiment dealing with the minimization of the ARB in background EEG is discussed. Attention is also given to the application of the ARB reaction in psychophysical studies; objective sensometrics of the auditory function is considered as an example. B.J.

**A82-24908 † Experience with the application of the method of evoked potentials in psychophysical studies (Opyt primeneniia metoda vyzvonnykh potentsialov v psikhofizicheskom issledovanii).** L. V. Matveeva. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 118-139. 41 refs. In Russian.

A psychophysical experiment is described in which the amplitude characteristics of evoked potentials were correlated with psychophysical indices of detection. An attempt is made to verify the hypothesis that early evoked-potential waves reflect the magnitude of the physical stimulus. It is found that the early waves do indeed reflect the magnitude of the stimulus, but that this reflection is not direct (as was originally thought) but indirect: *i.e.*, it is manifested in the sensory effect. Therefore it is more correct to say that the state of the analyzer input (and not the magnitude of the stimulus) is reflected in the early components. B.J.

**A82-24909 † Analysis of operator speed by means of neurophysiological methods (Analiz skorosti deistvii operatora s pomoshch'iu neirofiziologicheskikh metodov).** B. G. Bovin. In: Psychophysical studies of perception and memory. Moscow, Izdatel'stvo Nauka, 1981, p. 206-214. 9 refs. In Russian.

A formula for determining the reaction time of human operators is developed and confirmed experimentally. A direct comparison of the value of the dominant alpha-rhythm and the reaction time for various signal alphabet lengths yields a negative correlation coefficient: i.e., the greater the alpha-rhythm frequency, the shorter the reaction time. The results agree with Lebedev and Lutskii's reaction model and indicate that neurophysiological (*i.e.*, EEG) methods can be used to study operator reaction time. B.J.

**A82-24910 Tissue hypoxia and its correction (Tkanevaia gipoksiia i ee korrektsiia).** Edited by L. L. Vannikov. Novosibirsk, Izdatel'stvo Nauka, 1981. 80 p. In Russian.

The book treats the mechanisms giving rise to tissue hypoxia and possible means of chemical intervention for the treatment of tissue hypoxia arising in a variety of pathological conditions. The antioxidant effects of sodium persulfate in the treatment of radiation-induced tissue hypoxia are demonstrated, and mechanisms of early post-ischemic disturbances giving rise to hypoxia are examined together with the effects of sodium persulfate and cytochrome c on their development. Tissue oxygen balance in diabetes mellitus is discussed, and the treatment of diabetes with rheopolyglucine, heparin and sodium persulfate is investigated. Effects of vibration sickness on blood oxygen balance and acid-base equilibrium and of radiation on intracellular membranes and tissue hypoxia are also considered, and the oxidative properties of persulfates are discussed. A.L.W.

**A82-24914 Renin, aldosterone, and converting enzyme during exercise and acute hypoxia in humans.** J. S. Milledge and D. M. Catley (Northwick Park Hospital, Harrow, Middx., England). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Feb. 1982, p. 320-323. 14 refs.

The possibility that hypoxia might inhibit the secretion of angiotensin-converting enzyme (ACE) would explain the low concentrations of aldosterone reported in humans at high altitude. To observe the effect of such a reduction in ACE concentration on the plasma aldosterone concentration (PAC), four subjects performed mild exercise throughout a 2-h study so as to elevate their plasma renin activity (PRA). After the first 60 min breathing air they were switched to breathing 12.8% O2 (4,000 m altitude equivalent). Venous samples were taken at intervals for hormone analysis. Results showed the expected rise of PRA and PAC both tending toward a plateau after about 45 min. There was no significant change in ACE activity. Hypoxia produced a further 50% rise in PRA but a fall in PAC and a 30% reduction in ACE activity. Angiotensin I concentrations closely followed PRA throughout. These results indicate that during exercise acute hypoxia changes the usual close relationship between PAC and PRA by reducing ACE activity. (Author)

**A82-24915 Mechanical cardiopulmonary interdependence.** T. C. Lloyd, Jr. (Indiana University Medical Center, Indianapolis, IN). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Feb. 1982, p. 333-339. 15 refs. Grant No. PHS-R01-HL-15694.

Cardiopulmonary interdependence in ten pentobarbital sodium-anesthetized dogs is investigated in three ways. In the first, the increase in left atrial pressure required to hold cardiac output constant on application of a positive end-expiratory pressure is measured. In the second, the reduction in left atrial pressure required to mimic the cardiac output fall observed when a positive end-expiratory pressure is applied while the left atrial pressure is held constant is determined. In the third, left ventricular pressure-volume curves measured in freshly dead dogs during ventilation are compared with and without a positive end-expiratory pressure. It is found that the atrial pressure changes can be divided into terms for pleural pressure change, lung deformation, and an undefined residual component and that they can be used to obtain a compliance opposing ventricular filling. Another compliance is derived from the pressure-volume curves. C.R.

**A82-24919 Ventilatory responses at rest and during exercise in marathon runners.** D. A. Mahler, E. D. Moritz, and J. Loke (Yale University, New Haven, CT). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Feb. 1982, p. 388-392. 30 refs.

To evaluate ventilatory control and its possible role in athletic performance, measurements are made of ventilatory responses to hypercapnia and hypoxia at rest and of ventilatory equivalents for carbon dioxide and oxygen during exercise in 20 marathon runners and 20 control subjects. No significant differences exist in the ventilatory responses at rest to hypercapnia and hypoxia. In similar fashion, no significant differences are found in the ventilatory equivalents for carbon dioxide and oxygen between the two groups. Good correlation is observed between hypercapnic response at rest and exercise ventilation in the runners. However, both hypercapnic and hypoxic ventilatory responses correlate poorly with marathon running time. The results demonstrate no differences in ventilatory responses at rest and during exercise between marathon runners and control subjects. C.R.

**A82-24921 Effect of muscle glycogen content on glucose uptake following exercise.** R. D. Fell, S. E. Terblanche, J. L. Ivy, J. C. Young, and J. O. Holloszy (Washington University, St. Louis, MO). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Feb. 1982, p. 434-437. 24 refs. Grants No. NIH-AM-18986; No. NIH-AG-00425.

This study examined the effects of raising muscle glycogen by carbohydrate feeding and of keeping muscle glycogen low by carbohydrate restriction following exhausting exercise on the ability of perfused skeletal muscle to take up glucose and to synthesize glycogen. Muscle glycogen concentration was more than twice as high in the rats fed carbohydrate as in those not given carbohydrate. Muscle glycogen synthesis during a 30-min perfusion with glucose and insulin was significantly greater in the animals with low muscle glycogen. Furthermore the muscles with low glycogen content converted a greater proportion of the glucose taken up to glycogen and less to lactate than did the muscles with high glycogen content. In rats subjected to exhausting exercise on the preceding day, the rate of glucose uptake by perfused skeletal muscle was significantly higher (60-80%) at the same insulin concentration in animals in which muscle glycogen was kept low than in those in which glycogen was raised by carbohydrate feeding. **A82-25134 Relation between high density lipoprotein cholesterol and coronary artery disease in asymptomatic men.** G. S. Uhl, R. G. Troxler, J. R. Hickman, Jr., and D. Clark (USAF, School of Aerospace Medicine, Brooks AFB, TX). *American Journal of Cardiology*, vol. 48, Nov. 1981, p. 903-910. 25 refs.

Recent epidemiologic investigations have shown high density lipoprotein (HDL) cholesterol levels to have an inverse relation to the risk of developing coronary heart disease. The present paper reports a study of the relation of HDL cholesterol levels to latent coronary heart disease in asymptomatic subjects. Determinations of total serum cholesterol, HDL cholesterol, and triglycerides were made concurrently with electrocardiographic studies including symptom-limited exercise tolerance testing in 572 consecutive aircrew members. In addition, cardiac catheterization was performed on the 132 patients showing abnormal exercise electrocardiograms. The remaining 440 men, believed to have a 1% chance of having coronary artery disease, exhibited a mean cholesterol level of 213 mg/100 ml, mean HDL cholesterol of 51 mg/100 ml and mean cholesterol/HDL ratio of 4.4. Mean values did not differ significantly in men with normal angiographic findings or subcritical coronary disease, however 14 of 16 men with coronary artery disease had a cholesterol/HDL ratio of 6.0 or more compared with only four with normal coronary arteries. Results suggest that HDL cholesterol levels may be used to identify asymptomatic persons with greater risks of coronary heart disease. A.L.W.

**A82-25135 Limitations of echocardiographic techniques in evaluation of left atrial masses.** P. C. Come, M. F. Riley, J. F. Markis, and M. Malagold (Beth Israel Hospital; Harvard University, Boston, MA). *American Journal of Cardiology*, vol. 48, Nov. 1981, p. 947-953. 36 refs.

Limitations in the use of M mode and two-dimensional echocardiography in the evaluation of left atrial masses are demonstrated in case histories of patients in whom echocardiography failed to detect or greatly underestimated the extent of the lesion. M mode echocardiography in four patients and two-dimensional echocardiography in three of the four revealed the left atrium to be clear of echoes in two patients subsequently found in pathologic examination to have left atrial thrombi weighing 35 and 100 g. Definitely abnormal echoes were visualized only in the inferior aspect of the left atrium beneath the posterior root of the aorta in the third patient for whom angiography revealed a 70 g myxoma filling almost the entire left atrium. In the fourth patient, two-dimensional four-chamber apical scanning was superior to two-dimensional and M-mode long-axis scanning in defining the extent of a large left atrial myxoma. The results may be explained by the relatively homogeneous nature of certain intracavity masses. A.L.W.

**A82-25136 Two dimensional echocardiographic detection of intraatrial masses.** N. L. DePace, R. L. Soulen, M. N. Kotler, and G. S. Mintz (Hahnemann Medical College and Hospital; Temple University Hospital, Philadelphia, PA). *American Journal of Cardiology*, vol. 48, Nov. 1981, p. 954-960. 46 refs.

The relative merits of two-dimensional and M mode echocardiography in the evaluation of intraatrial masses are investigated in a study of 19 patients. In ten patients with rheumatic mitral stenosis, two-dimensional echocardiography revealed left atrial thrombus as indicated by a mass of irregular nonmobile laminated echoes within an enlarged atrial cavity, usually with a broad base of attachment to the posterior left atrial wall. In seven patients with a left atrial myxoma, the myxoma appeared as a mottled ovoid, sharply demarcated mobile mass attached to the interatrial septum. Two-dimensional echocardiography also detected the presence of a right atrial angiosarcoma and a left atrial leiomyosarcoma in the remaining patients. M mode echocardiography, on the other hand, was able to detect only six of the myxomas, one thrombus, and neither of the other tumors. Two dimensional echocardiography thus appears to be the technique of choice in the detection, localization and differentiation of intraatrial masses. A.L.W.

**A82-25162** **Detection and recognition - Concurrent processes in perception.** R. Parasuraman, F. Richer, and J. Beatty (California, University, Los Angeles, CA). *Perception and Psychophysics*, vol. 31, no. 1, Jan. 1982, p. 1-12. 45 refs. Contract No. N00014-76-C-0616.

The relationships between and dynamic brain characteristics of detection and recognition are investigated by the examination of the event-related potentials (ERPs) of the brain during a simultaneous detection and recognition task. EEGs were recorded in 10 subjects listening to pure tones in noise who were asked to report whether one of a set of a target tones had occurred, and to which of two or four tones the target corresponded. A correctly detected and identified target stimulus is found to be associated with changes in the N100 negative potential and in the P300 positive brain potential that disclose temporal features of stimulus processing. In addition, a slow positive potential is observed to contribute to changes in the P300 amplitude. The amplitude of the N100 ERP component varies only with processing related to stimulus detection, while the P300 component varies with both detection and recognition and the slow potential varies only with recognition. Results support the view that detection and recognition are partially independent, concurrent processes, with the process of detection beginning before the process of identification. A.L.W.

**A82-25188** † **Current questions in the problem of flight crew fatigue (Ob aktual'nykh voprosakh problemy utomleniia letnogo sostava).** V. I. Kopanev. *Voenno-Meditsinskii Zhurnal*, Jan. 1982, p. 49-51. In Russian.

Various aspects of the problem of flight fatigue requiring further study are discussed. A definition for flight fatigue is proposed as the physiological state arising in air crews during flight as the result of flight activity and characterized by a reduction in work capacity and changes in homeostasis parameters. The evaluation of crew member work capacity based on criteria of professional activity and physiological condition is considered, and the differentiation between states of flight fatigue and overstrain is discussed. The signs of flight fatigue are examined, with attention given to the reduction in work capacity, behavioral reactions, slowing of mental processes, illusions and loss of spatial orientation, the appearance of the stress state, subjective feelings of fatigue, and changes in hemodynamics, and possible means for preventing fatigue and overstrain are considered. A.L.W.

**A82-25189** † **Characteristics of skin function in sailors in the tropics (Nekotorye osobennosti funktsii kozhi u moriakov v tropikakh).** G. F. Grigorenko and V. V. Berdyshev. *Voenno-Meditsinskii Zhurnal*, Jan. 1982, p. 52-54. In Russian.

Results are presented of an investigation of the functional characteristics of the skin and their relation to skin pathology in sailors in the tropics. Parameters characterizing skin thermoregulatory, protective, excretory and reabsorptive function were measured before and after sailing in sailors completing cruises of various durations in subtropical and tropical waters. Measurements of skin temperatures, sweat production rates and sensitivity to parasympathetic mediators reveal an enhancement in thermoregulatory functioning, while analyses of sweat composition at various stages indicate enhancements in excretory and reabsorptive functions. Changes in responses to the Kavetskii and Rotter tests, vascular resistance, ultraviolet biodose times, acid-base balance and bactericidal properties also reveal significant changes in the protective functions of the skin. In sailors with various skin diseases (dermatitis, eczema, pyodermitis), significant differences in protective, reabsorptive, excretory functions were found with respect to healthy sailors. Results suggest a connection between characteristics of skin function in hot and humid climates and the increased dermal morbidity of sailors in the tropics, and allow a set of recommendations to be formulated for the prevention of skin diseases. A.L.W.

**A82-25220** **Biochemical evolution.** Edited by H. Gutfreund (Bristol, University, Bristol, England). Cambridge and New York, Cambridge University Press, 1981. 374 p. $25.

Selected topics in the evolution of biochemical pathways and the use of biochemical techniques to derive phylogenetic relationships are discussed. Prebiotic chemical evolution is considered, particularly as regards self-replication, translation and compartmentalization, and data handling methods for deriving phylogenetic trees from amino acid or nucleotide sequences are examined. Attention is also given to the evolution of bacterial enzymes, the photosynthetic apparatus in procaryotes and in eucaryotes as a result of endosymbiosis, the major histo-compatibility antigens, immunoglobulins, the control mechanisms of muscle contraction, and the vertebrate visual pigments. A.L.W.

**A82-25230** † **The controlled cultivation of plants in an artificial medium - Biotechnological foundations (Upravliaemoe kul'tivirovanie rastenii v iskusstvennoi srede - Biotekhnicheskie osnovy).** V. I. Rozhdestvenskii and A. F. Kleshnin. Moscow, Izdatel'stvo Nauka, 1980. 200 p. 210 refs. In Russian.

Technological aspects of the cultivation of plants under automatically controlled artificial conditions are discussed in light of the importance of such techniques for the optimization of biomass and agricultural production. A survey is presented of the various types and organization of phytotrons and other systems for the controlled cultivation of plants in artificial media. Particular attention is then given to the components of such systems, including high-intensity irradiators, air conditioning systems, systems for the automatic regulation of the gas medium and the measurement of photosynthesis intensity, and the automatic control of plant mineral requirements. Potentials for the inclusion of electronic computer control are also considered. A.L.W.

**A82-25231** † **Systemic mechanisms of emotional stress (Sistemnye mekhanizmy emotsional'nogo stressa).** K. V. Sudakov. Moscow, Izdatel'stvo Meditsina, 1981. 232 p. 145 refs. In Russian.

The book examines the systemic manifestations of emotional stress occurring in humans and animals in conflict situations. Emotional stress is discussed as the leading factor in the development of cerebrovisceral disorders, and systemic mechanisms of arterial pressure regulation and their impairment under conditions of emotional stress are considered. Attention is given to genetic, nervous and humoral mechanisms of resistance and predisposition of the cardiovascular system to emotional stress, and to the cerebral mechanisms of the development of the stress syndrome. Recommendations are also presented concerning means of increasing human cardiovascular resistance to acute and chronic emotional stresses. A.L.W.

**A82-25244** † **Innervation of skin glands of the hedgehog /Erinaceus europaeus/ and its histochemical changes induced by hibernation (Innervatsiia kozhnykh zhelez ezha /Erinaceus europaeus/ i ee gistokhimicheskie izmeneniia, vyzyvaemye zimnei spiachkoi).** V. **A82-25321** † **Investigation of the effects of space flight factors on rat bone marrow cell chromosomes (Issledovanie vliianiia faktorov kosmicheskogo poleta na khromosomy kletok kostnogo mozga krys).** N. N. Bobkova. *Kosmicheskie Issledovaniia*, vol. 20, Jan.-Feb. 1982, p. 154, 155. 11 refs. In Russian.

Metaphase analyses of the structure of bone marrow cell chromosomes were performed in rats on the second and 27th days following 22-day exposure on board the Cosmos-605 satellite.

Frequencies of chromosome aberrations (individual fragments) are observed to range between 1 and 4% in experimental animals, and between 1 and 3% in ground controls. Statistical analysis reveals the experimental aberration frequencies not to differ significantly from the control, and to fall within the limits of the oscillations of the spontaneous rate. A.L.W.

**A82-25372 * Carbon isotopic fractionation in the biosynthesis of bacterial fatty acids - Ozonolysis of unsaturated fatty acids as a means of determining the intramolecular distribution of carbon isotopes.** K. D. Monson and J. M. Hayes (Indiana University, Bloomington, IN). *Geochimica et Cosmochimica Acta*, vol. 46, Feb. 1982, p. 139-149. 45 refs. Grant No. NGR-15-003-118.

**A82-25494 Method for the analysis of pilot postural behavior based on head-up - head-down simulations (Méthode d'analyse du comportement postural du pilote à partir de simulations tête haute - tête basse).** A. Coblentz, R. Mollard, G. Ignazi, R. Steck (Paris V, Université, Paris, France), G. Santucci, J.-P. Menu, and D. Batejat (Centre d'Etude et de Recherche de Médecine Aérospatiale, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 20, no. 79, 1981, p. 184-190. 7 refs. In French.

A simulation method has been developed for use in the analysis of pilot posture during a mission, allowing the definition of zones of preferential pilot activity for purposes of cockpit design. The method is based on experiments undertaken with an adjustable cockpit model, using a task simulation software package reproducing tasks performed in the head-up and head-down positions. Postural variations are studied by means of numerical image processing, allowing the three-dimensional analysis of segmental displacements. The method is to be applied in experiments with a sample of pilots selected to exhibit the biometric characteristics of the predicted pilot population 10-15 years in the future, and the resulting experimental data will be used in the modeling of the cockpit-pilot system. A.L.W.

**A82-25495 Modifications in systolic time intervals induced by the transition to weightlessness (Modifications des temps systoliques provoquées par le passage en absence de pesanteur).** J. Colin (Service de Santé des Armées, Centre de Recherches, Clamart, Hauts-de-Seine, France) and J. Timbal. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 20, no. 79, 1981, p. 191-194. 11 refs. In French.

Cardiovascular effects of the transition from normal gravity to weightlessness are investigated in a noninvasive study of systolic time intervals in subjects undergoing a body tilt from the passive vertical position to the quasi-horizontal. Systolic intervals were measured by cardiac electrical impedance plethysmography during rest in the vertical position and tilting to a head-down position at an angle of -5 deg from the horizontal. While no variation is observed in the presystole and the time separating the Q wave and mitral closure, tilting is found to induce significant decreases in heart rate, pre-ejection period, isovolumetric contraction time and pre-ejection period/left ventricular ejection time ratio, and increases in left ventricular ejection time. Results are symmetric with respect to experiments on tilting from the horizontal to the vertical positions, and may be explained as the result of hemodynamic reactions to fluid shifts. A.L.W.

**A82-25496 Coronary risk in flight personnel: Epidemiologic approach - Incidence upon screening and prevention (Le risque coronarien dans le personnel navigant: Approche épidémiologique - Incidence sur le dépistage et la prévention).** G. Leguay, J. F. Poulignier, A. Seigneuric, G. Jacob, and J. Traversat (Hôpital d'Instruction des Armées Dominique Larrey, Versailles, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 20, no. 79, 1981, p. 195-200. 9 refs. In French.

An epidemiologic study is presented of the risk factors for the development of coronary artery disease in flight personnel and their implications for screening and prevention. The longitudinal study was performed using the medical records of 100 military flight personnel, 25 of whom had a history of myocardial infarction, 25 of whom had experienced primary repolarization difficulties classified as benign, and the remainder of whom had no evident coronary problems. Analysis of the risk factors previously uncovered in the Framingham study (cholesterol, arterial pressure, smoking, diabetes, obesity, a family history of cardiovascular problems, psychological profile and age) reveals them not to be influenced by aeronautical activity. It is, however, observed that transport pilots have a greater risk of developing myocardial infarction than fighter pilots. The importance of reducing the known risk factors for the prevention of coronary disease is emphasized, and the greater predictive value of stress electrocardiograms in the identification of disease in individuals at high epidemiologic risk is noted. A.L.W.

**A82-25497 Mechanisms of motion sickness (Mécanismes du mal des transports).** A. Léger (Centre d'Essais en Vol, Laboratoire de Médecine Aérospatiale, Brétigny-sur-Orge, Essonne, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 20, no. 79, 1981, p. 201-204. 8 refs. In French.

Recent hypotheses proposed to explain the essential nature of motion sickness are discussed. Following a survey of the nervous and sensory structures implicated in the etiology of motion sickness, including most importantly components of the vestibular system, attention is given to the sensory mismatch model developed by Reason (1975, 1978). The model mechanism is based upon the comparison of sets of sensory inputs with an internal model, resulting in an error signal inducing the motion sickness when inputs do not agree with past experience. Conflicts are classified as visual-vestibular or intralabyrinthine, and may arise upon the simultaneous presentation of stimuli, or the absence of one set of stimuli. The significance of motion sickness is also considered, and it is noted that it may be useful to treat the syndrome as a stress response. A.L.W.

**A82-25498 The psychological selection of French astronauts for a Franco-Soviet scientific space mission (La sélection psychologique des spationautes Français en vue d'une mission scientifique spatiale Franco-Soviétique).** J. Bremond and G. Veron (Service de Santé des l'Armées, Saint-Cyr-l'Ecole, Yvelines, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 20, no. 79, 1981, p. 205-210. In French.

The procedures used in the psychological selection of French candidates in a joint Franco-Soviet mission to the Soyuz space station are discussed. The psychological selection process, performed within the context of a full educational, professional medical, psychological and training selection program, includes a series of performance tests to measure numerical, spatial, verbal and social abilities, memory and intelligence, personality tests to detect psychopathological tendencies, group interaction tests to study decision making, intellectual rigor and honesty and social participation, and conversations with psychiatrists. Out of the 193 candidates undergoing the entire evaluation process, two were finally selected to undergo training in the USSR, both being military pilots and engineers pursuing careers as test pilots. A.L.W.

**A82-25500 Cosmic ray measurements on board the Concorde /results after four years/ (Mesures des radiations cosmiques à bord de Concorde /résultats après 4 ans d'exploitation/).** J. Pasquet, J. Lavernhe, and E. Lafontaine (Compagnie Nationale Air France, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 20, no. 79, 1981, p. 222-227. 15 refs. In French.

The advent of commercial supersonic flight has introduced the flying population to a new potential risk - increased cosmic radiation at stratospheric heights. The present paper presents the results of four years of measurement of the radiation doses received on board the Concorde. Dose rates are observed to be greater over the North American routes than the other routes served, in agreement with expectations, and average 1.40 and 0.80 mrem hour, respectively. The alert level of 10 mrem/h was never encountered, nor were solar proton events observed. The values obtained are well below international radiation standards for occupational and public exposures to ionizing radiation, and appear low with respect to doses required for significant carcinogenic effects. It is noted that, although reassuring, the results do not justify the discontinuation of radiation monitoring or the modification of radiation alert or protection procedures. A.L.W.

**VESTIBULAR EXPERIMENTS**
L. R. Young *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 5 p

Avail: NTIS HC A08/MF A01 CSCL 06P

Spacelab experiments designed to investigate space motion sickness, any associated changes in otolith-mediated responses occurring during weightlessness, and the carryover of any such changes to postflight conditions are described. The experiments aimed at assessing otolithic responses in space are intended to clarify presumed alterations in vestibular function during weightlessness. Vestibular function will be investigated at several levels: vestibulo-ocular reflexes, vestibulo-spinal pathways, cortical functions involving perception of motion and spatial orientation, visual vestibular interaction, and motion sickness susceptibility. A second major objective relates to space motion sickness and man's well-being and productivity in space. M.G.

**VESTIBULO-SPINAL REFLEX MECHANISMS**
M. F. Reschke *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 2 p

Avail: NTIS HC A08/MF A01 CSCL 06P

The specific objectives of experiments designed to investigate postural reflex behavior during sustained weightlessness are discussed. The first is to investigate, during prolonged weightlessness with Hoffmann response (H-reflex) measurement procedures, vestibulo-spinal reflexes associated with vestibular (otolith) responses evoked during an applied linear acceleration. This objective includes not only an evaluation of otolith-induced changes in a major postural muscle but also an investigation with this technique of the adaptive process of the vestibular system and spinal reflex mechanisms to this unique environment. The second objective is to relate space motion sickness to the results of this investigation. Finally, a return to the vestibulo-spinal and postural reflexes to normal values following the flight will be examined. The flight experiment involves activation of nerve tissue (tibial N) with electrical shock and the recording of resulting muscle activity (soleus) with surface electrodes. Soleus/spinal H-reflex testing procedures will be used in conjuction with linear acceleration through the subject's X-axis. M.G.

**THE INFLUENCE OF SPACE FLIGHT ON ERYTHROKINETICS IN MAN**
Carolyn S. Leach *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p

Avail: NTIS HC A08/MF A01 CSCL 06S

An experiment is described the purpose of which is to measure specific factors relative to the control of erythrokinetics in man which might be altered during the first seven days of exposure to the weightless environment of space flight. It is anticipated that these data will provide information relative to the mechanism by which the red cell mass is reduced during space flight. Specifically, the experiment is designed to establish: (1) if there is a significant change in red cell mass and plasma volume during the initial period of exposure to weightlessness; (2) if the plasma concentration of erythropoietin is reduced; (3) if there is an increase in the plasma concentration of erythropoietin inhibitors; (4) if there is a change in the effectiveness of erythropoiesis; and (5) if the number and age distribution of reticulocytes are altered. **MEASUREMENT OF CENTRAL VENOUS PRESSURE AND DETERMINATION OF HORMONES IN BLOOD SERUM DURING WEIGHTLESSNESS**
K. Kirsch *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 2 p

Avail: NTIS HC A08/MF A01 CSCL 06P

A Spacelab experiment is described which proposes to obtain data on the degree of engorgement of the cephalad circulation during weightlessness by recording central venous pressure. Of practical importance is the question of how close the astronauts are to pulmonary edema and whether the pressure falls toward normal during the time of the mission. Another experiment to investigate deviations from normal fluid and mineral metabolism, possibly initiated by the central engorgement of the low pressure system, is discussed. Hormones responsible for the control of water and mineral balance (vasopressin, catecholamines, renin, aldosterone, corticosteroids, and prostaglandin E1) will be analyzed from blood samples. M.G.

**EFFECT OF WEIGHTLESSNESS ON LYMPHOCYTE PROLIFERATION**
Autusto Cogoli *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 4 p

Avail: NTIS HC A08/MF A01 CSCL 06P

An experiment to study the effect of weightlessness on lymphocyte proliferation to detect possible alteration of the cells responsible for the immune response during long-duration space flights is described. Human lymphocytes in culture medium will be delivered shortly before launch in an incubator which will be kept at 37C. Mitogen will be added to the culture. A control without mitogen will be run in parallel. After 70 hours of incubation, radioactive thymidine will be added. After two hours, cellular activity will be stopped by fixation and incubator power switched off. Later, the amount of incorporated thymidine will be determined and the cell morphology and the distribution of cell organelles will be investigated. R.J.F.

**N82-18262*#** Rome Univ. (Italy).
**THREE-DIMENSIONAL BALLISTOCARDIOGRAPHY IN WEIGHTLESSNESS**
A. Scano *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 4 p

Avail: NTIS HC A08/MF A01 CSCL 06E

An experiment is described the aim of which is to record a three dimensional ballistocardiogram under the condition of weightlessness and to compare it with tracings recorded on the same subject on the ground as a means of clarifying the meaning of ballistocardiogram waves in different physiological and perphaps pathological conditions. Another purpose is to investigate cardiovascular and possibly fluid adaptations to weightlessness from data collected almost simultaneously on the same subjects during the other cardiovascular during the other cardiovascular and metabolic experiments. R.J.F.

**MASS DISCRIMINATION DURING WEIGHTLESSNESS**
Helen Ross *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p

Avail: NTIS HC A08/MF A01 CSCL 06S

An experiment concerned with the ability of astronauts to discriminate between the mass of objects when both the objects and the astronauts are in weightless states is described. The main object of the experiment is to compare the threshold for weight-discrimination on Earth with that for mass-discrimination in orbit. Tests will be conducted premission and postmission and early and late during the mission while the crew is experiencing weightlessness. A comparison of early and late tests inflight and postflight will reveal the rate of adaptation, to zero-gravity and 1-g. The mass discrimination box holds 24 balls which the astronaut will compare to one another in a random routine. R.J.F.

**NUTATION OF HELIANTHUS ANNUUS IN A MICROGRAVITY ENVIRONMENT**
Allan H. Brown *In* NASA. Marshall Space Flight Center Spacelab Mission 1 Expt. Descriptions Nov. 1981 3 p

Avail: NTIS HC A08/MF A01 CSCL 06C

An experiment to gather evidence to decide between the Darwinian concept of endogenously motivated nutation and the more mechanistic concept of gravity dependent nutation is described. If nutation persists in weightlessness, parameters describing the motion will be measured by recording in time lapse mode the video images of a population of seedlings that were grown at 1-g, but which will be observed at virtual zero gravity. Later, the plant images will be displayed on a video monitor in a laboratory, photographed on 16 millimeter film, and analyzed frame by frame to determine the kinetics of nutation for each specimen tested. R.J.F.

Water immersion and prolonged bed rest reproduce nearly all the physiological responses observed in astronauts in the weightless state. Related to actual weightlessness, given responses tend to occur sooner in immersion and later in bed rest. Much research was conducted on humans using these two techniques, especially by Russian scientists. Abstracts and annotations of reports that appeared in the literature from January 1974 through December 1980 are compiled and discussed. Author

The objectives of this research are to develop rapid in-vitro assays to evaluate the carcinogenic potential of chemicals used by the U.S. Air Force. Snyder-Theilen Feline Sarcoma Virus (ST FeSV), quantitatively transforms human skin fibroblasts following second order kinetics. These studies were performed in order to determine whether chemicals altered ST FeSV transformation in a predictable manner and to correlate the alteration with the carcinogenic or non-carcinogenic activity of the text chemical. The results, to date, show diverse carcinogens classed as: aromatic amines, polycyclic hydrocarbons, Aminofluorenes, hydrazines, asbestos and mycotoxins inhibited virus transformation when virus infected cells (2 hours post-infection) were exposed to test chemical, while non-carcinogenic chemicals had no significant effect on transformation. Triton X-100, acetone, petroleum and shale oil derived JP5; RJ5 and diesel fuel, marine, demonstrated non-carcinogenic activity while formaline demonstrated carcinogenic activity. Experiments designed to show the specificity of the antagonistic effect of known carcinogens are reported. Disulfuram inhibits biotransformation of 1,2 symmetrical dimethyl hydrazine (SDMH) metabolites, azomethane to azoxymethane (ultimate carcinogen) thereby preventing carcinogenic effect of the proximate carcinogen SDMH. Detailed methodology required to ascertain effect of chemicals on ST FeSV pro-virus integration and synthesis are presented. GRA

**SCATTER DIAGRAMS BASED ON THE ANTHROPOMETRIC SURVEY OF 2000 ROYAL AIRFORCE AIRCREW (1970/1971)**
R. E. Simpson and E. Violet Hartley 10 Feb. 1981 154 p refs
(RAE-TR-81017; RAE-EP-763; BR79375) Copyright. Avail: Issuing Activity

An anthropometric survey was conducted in order to provide information for aircrew clothing, personal equipment and aircraft workspace design purposes. Scatter diagrams of pairs of measurements of value to engineers, ergonomists or clothing designers who require information on the interrelationship between specific measurements are presented. Each subject is represented by a pair of coordinates, x and y, which represent the two measurements considered. Information on the number of subjects to which the diagram relates, means of x and y variate values, correlation coefficient, and regression equations for the x and y variates are given. Functional clothing sizing is based on two control measurements, e.g., stature and chest circumference for one piece coveralls. Author (ESA)

**MISSION OPERATION REPORT: SPACE SHUTTLE PROGRAM. STS-2 POSTFLIGHT MEDICAL OPERATIONS**
29 Jan. 1982 23 p
(NASA-TM-84135; E-989-81-02) Avail: NTIS HC A02/MF A01 CSCL 06S

The STS-2 mission presented the NASA medical team with a series of operational problems associated with the potential contamination of the onboard potable water and altered work/rest cycles. The first problem was traced to the inflight malfunctioning fuel cell, while the second was attributed to the modification of in-flight crew timelines in order to maximize the scientific data acquisition. Shortened sleep period, heavy work loads, inadequate time allocation for food preparation and consumption and estimated low water intake, though tolerable for a 54 hour mission, would have been unacceptable for a longer misson. A contingency plan was developed to restructure in-flight time-lines and institute corrective health maintenance procedures in the event that the mission was extended beyond 54 hours. Minor losses of medical data occurred as a result of the shortened mission duration. All phases of the mission required real-time re-evaluation, identification of potential impact on preexisting medical constraints, and development of appropriate recommendations and solutions. The activities required significant coordination among the different teams involved in medical operations. N.W.

**ANALYSIS OF VOLATILE METABOLITES IN BIOLOGICAL FLUIDS AS INDICATORS OF PRODROMAL DISEASE CONDITION Final Report**
A. Zlatkis Jan. 1982 25 p refs
(Contract NAS9-15882)
(NASA-CR-167513) Avail: NTIS HC A02/MF A01 CSCL 06E

The volatile profile cannot be defined as a single class of substances, rather it is a broad spectrum of materials of different polarities characterized by having a boiling-point in the low to medium range (up to approximately 300 C) and the fact that the compounds are suitable for gas chromatography without derivatization. The organic volatile profiles are very complex mixtures of metabolic byproducts, intermediates, and terminal products of enzymatic degradations composed mainly of alcohols, ketones, aldehydes, pyrazines, sulfides, isothiocyanates, pyrroles, and furans. The concentration of organic volatiles in biological fluids covers a wide range with many important components present at trace levels. The complexity of the organic volatile fraction requires the use of capillary columns for their separation. T.M.

The goal of this project is to use data from regularly scheduled physical examinations to estimate the probability of an event such as a heart attack. This is done via the construction of a mathematical model. A high probability of an event as computed by the model would be evidence of a high risk case. The model developed here, termed the periodic checkup predictive model, is a survival distribution model similar to the proportional hazards model when there is little or no loss to followup and to logistic regression when the object is to predict the occurrence of an event during a fixed interval of time. Present developments show that technical equipment compliments the diver's work and makes it easier, but cannot take the place of the diver. In bell diving a depth of 700 m was reached in 1981. Data from North Sea diving under harsh weather conditions were studied and make up, to a certain extent, the background of research and development in the next decade. Oil and gas resources at depths between 300 and 600 m will be exploited at that time. Diving at such depths involves special problems. Safety requirements for divers are addressed. Author (ESA)

(Grant EPA-R-805643)
(PB82-109356; EPA-600/1-81-068) Avail: NTIS HC A05/MF A01 CSCL 06T

An assessment of the relative safety of chronically administered chlorine water disinfectants in man was undertaken. A rising dose tolerance investigation examined the effects of single dose increasing concentration administration of chlorine disinfectants to normal healthy adult male volunteers. The impact on normal subjects of twelve week daily ingestion of the disinfectants was addressed. Physiological impact was assessed by evaluation of a large battery of qualitative and quantitative tests. In general, the study affirmed the relative safety and tolerance of normal healthy adult males and normal healthy adult male glucose-6-phosphate dehydrogenase deficient individuals to daily twelve week ingestion of 500 mL of chlorine disinfectants at a concentration of 5 mg/L. **EFFECT OF TACTILE VIBRATION ON ANNOYANCE TO SYNTHESIZED PROPFAN NOISE**
Sherman A. Clevenson Dec. 1981 16 p refs Presented at the 102nd Meeting of the Acoust. Soc. of Am., Miami Beach, Fla., 1-4 Dec. 1981
(NASA-TM-83258) Avail: NTIS HC A02/MF A01 CSCL 05H

Design information that maximizes passenger comfort for propfan aircraft is presented. Predicted noise and vibration environments and the resultant passenger acceptability were studied. The effect of high frequency tactile vibration (i.e., greater than 30 Hz) on passenger reactions was analyzed. Passenger reactions to a wide range of noise with and without tactile vibration was studied. The passenger ride quality simulator was employed using subjects who evaluated either synthesized propeller noises only, or these noises combined with seat/arm vibration. The noises ranging from 80-100 dB consisted of a turbulent boundary layer noise with a factorial combination of five blade passage frequencies (50-200 Hz), two harmonic rolloffs, and three tone/noise ratios. It is indicated that passenger reaction (annoyance) to noise is not significantly changed in the presence of tactile vibration. E.A.K.

**TIME-SHARING MANUAL CONTROL AND MEMORY SEARCH: THE JOINT EFFECTS OF INPUT AND OUTPUT MODALITY COMPETITION, PRIORITIES AND CONTROL ORDER**
Michael Vidulich and Christopher D. Wickens Dec. 1981 61 p refs
(Contract N00014-79-C-0658; NR Proj. 196-158)
(AD-A108721; EPL-81-4/ONR-81-4) Avail: NTIS HC A04/MF A01 CSCL 05/1

This report addresses some of the issues that must be considered as voice recognition and synthesis (VRAS) technology is integrated into complex man-machine system environments. These issues include the input and output channels demanded by competing activities, task difficulty or workload, the allocation of attention and the nature of the task that - spatial or verbal - will be interfaced with VRAS. The present experiment addresses primarily the first three issues within the framework of multiple resource theory. Ten subjects performed first and second order tracking tasks either alone or concurrently with a Sternberg Memory Search Task with a set size of three letters. In different conditions the memory search task was presented either auditorily (A) or visually (V), and responses were executed with either a speech response (S), or manually (M). These generated four input/output combinations: AS, VS, AM, VM, that could be defined in terms of an increasing degree of resource overlap with the VM tracking task. GRA

(AD-A109179; TR-111-ONR) Avail: NTIS HC A03/MF A01 CSCL 05/10

An empirical method is described to derive good names for unfamiliar objects. Three principles were used in deriving the names: (1) The vocabulary and structure of the names should be within the user's linguistic capacities; (2) the names should be informationally efficient, namely, short, but at the same time unique; and (3) the names should form a classification system. For example, most names have a generic term and one or more modifiers. These principles lead to the following design for creating good names: Step 1: Names are generated by a group of subjects. Step 2: From the names generated by subjects, the experimenter chooses a subset of the names according to the following criteria: (a) the modal name is chosen, namely, if a particular name is generated more often than others, it is chosen; (b) shorter names are preferred; (c) names chosen stay within the classification system provided by the subjects. Step 3: How good the names are is tested by measuring (1) how well people can match the names with the objects they describe; and (2) how well they can recall the names, given the physical objects. Steps 2 and 3 can be iterated; namely, if a given name is poorly matched or recalled, it can be replaced by another generated name and tested again. The method results in names that form a classification system and that are natural, short, well matched with their physical referents and well recalled. GRA

**IDENTIFICATION OF THE ADAPTIVE FEEDBACK OF THE HUMAN MOTOR SYSTEM USING THE RESPONSE DIFFERENCE METHOD (RDM)**
Ton Eland Jul. 1981 131 p refs
(WTHD-134) Avail: NTIS HC A06/MF A01

The role of proprioceptive and visual feedback in generating slow, goal directed movements was investigated using a cybernetic model. The physiological structure of the movement control system is reflected by a feedforward path and a parallel feedback loop. Psychological schemata identified in the feedforward path are the internal model of the task, and the internal model of the motor system load. The RDM uses the differences between a routine and a disturbed response to identify the feedback system. The method was tested by computer simulation and a control stick positioning task. Correlation between model and measured results is >0.95. Visual feedback is only used for a continuous readjustment of the proprioceptive position sense. Proprioceptive feedback tuning is dependent of the velocity of the planned movement. The proprioceptive velocity feedback adapts within 130 msec to an increase in the mass which is moved. Proprioceptive feedback does not adapt to a decreasing mass and/or a changing damping of the load. Author (ESA)

Management systems applied to evaluate qualitative and quantitative personnel requirements for maintaining the man machine system (MMS) were determined. Qualitative personnel requirements are plant operation, attendance, maintenance/placement of the MMS needed, professional specialty, and job qualification. In quantitative personnel requirement the number of needed manpower is determined for every professional specialty and area. Personnel selection is recommended for activities, special abilities, performance, and skills. Personnel selection should be made according to these criteria. It is concluded that ergonomic measures are necessary in the development process of the MMS. Transl. by E.A.K.

(Contract F33615-79-C-0520)
(AD-A108643; D180-25471-1) Avail: NTIS HC A11/MF A01 CSCL 05/5

Human engineering (HE) procedures during the system acquisition process are presented for the assistance of various Air Force and industry personnel. The guide is divided into three parts. The first part of the guide is introductory material which scopes the effort and defines HE and human factors engineering (HFE). The second part provides guidance to Air Force and industry management. The third, and last part is the largest section and it provides assistance to both Air Force and industry persons assigned direct responsibility for HE. The management portion shows current management aspects of the HE process utilizing directives, specifications, regulations and pamphlets. HE activities are described in general terms of both what should be done and when it should be accomplished. GRA

The Committee on Human Factors was established and held its first meeting in December 1980. The three principal accomplishments of the committee during the reporting period were: (a) identifying critical problems in human factors and formulating preliminary statements defining the nature of these problems and the basic research needed to alleviate these problems; (b) establishing membership and guidelines for a special working group on simulation; and (c) planning the conduct of a workshop on applied methodologies that will identify some methodologies suitable for presentation at a tutorial symposium and other methodologies deserving research support. In supervisory control situations involving multiple human operators, proper cooperation and coordination is essential. In addition to their individual tasks, the operators are jointly responsible for certain tasks. It is usually not clear when and who should take responsibility for the joint tasks. Proper scheduling of tasks and appropriate allocation of resources are necessary for optimal performance, and in some instances, for overall safety. Understanding how multiple operators interact requires the understanding of single operator performance. A model based on Pareto optimality and Fuzzy Set theory was developed for the human operation. An experimental paradigm had been developed earlier to study the human monitor. The scenario used was similar to monitoring the spread of forest fires, and timely identification of threatening conditions. Experiments were conducted based on the paradigm. Results showed that the operators used updates to reduce the uncertainty to a sufficiently low level before starting threat classification. Sites where the probability of damage was close to 0.5 were more difficult to classify. Author

**BIOCHEMICAL, PHYSIOLOGICAL AND ECOLOGICAL ASPECTS OF AMMONIUM REGENERATION BY MARINE CRUSTACEANS Ph.D. Thesis**
Robert Richard Bidigare 1981 122 p
Avail: Univ. Microfilms Order No. 8128874

Laboratory investigations were carried out with the marine mysid, Praunus flexuosus, to assess the degree of coupling between glutamate dehydrogenase (GDH) activity and the rate of whole animal ammonium excretion. A strong correlation between GDH activity and rate of ammonium excretion by this mysid confirmed that ammonium excretion rates could be accurately predicted by employing the enzyme assay presented here. GDH activity surveyed in different taxa of marine crustaceans was higher in muscle tissue extracts than in gill tissue extracts or in a whole animal homogenate. Zooplankton excretion experiments conducted during austral spring and summer in the Scotia Sea, Antarctica, showed that weight-specific ammonium excretion increased both with increasing ambient temperature and with decreasing body size. The GDH assay appears useful as an alternative method to the traditional time-course, animal-in-a-jar experiments for quantifying zooplankton excretion impacts in the world oceans. Used in conjunction with the ETS assay, the GDH assay is a sensitive tool for surveying depths of maximal grazing and/or predation. Dissert. Abstr.

**LIFE SCIENCES PASSIVE GN2 FREEZER THERMAL PERFORMANCE TEST Summary Report**
G. W. Belshaw 13 Nov. 1981 79 p
(Contract NAS9-15629)
(NASA-CR-167546) Avail: NTIS HC A05/MF A01 CSCL 06C

Thermal performance tests that were conducted on the life sciences passive GN2 freezer project are summarized as well as the improvements to the freezers to improve the thermal performance of the containers. Procedures were developed, based upon these tests, to initially charge the freezers with LN2 and verify that the freezer performance is adequate for the mission duration. Improvements were made to the corvac sample tube to limit the amount of breakage due to thermal expansion of the liquid during freezing. A method of verifying the freezer vacuum insulative integrity was defined as well as a procedure for refurbishment of the internal vacuum level. Freezer modifications were made to ease the reevacuation of the containers. The orientation of the freezer in a 1-G environment, after being charged, had to remain in a vertical position. The LN2 boiloff rate increased significantly in a horizontal position. This resulted in a stowage definition in the spacecraft prior to launch. Functional testing, using the SL-1 mission timeline showed that the freezer will maintain samples in the frozen state for the duration of the mission. S.L.

**STUDY OF THE KINETICS OF OXYGEN SATURATION OF FLUOROCARBON EMULSIONS**
Yu. D. Aprosin, V. K. Alekseeva, and N. I. Afonin 1982 20 p refs Transl. into ENGLISH from Vop. Med. Khim. (Russia), v. 26, no. 6, 1980 p 793-799
(ISSN-0077-5606; NRC/CNR-TT-2007) Avail: NTIS HC A02/MF A01

The use of fluorocarbon emulsions as blood substitutes is addressed. Specifically, the mechanism of oxygen absorption by perfluorotributyl amine (PFTBA) emulsions is examined. The functional dependence of the absorption constant on various parameters (viscosity, temperature, and concentration of PFTBA in the emulsion) was established, and a comparative analysis of the efficiency of gas transport by the emulsion and by blood was carried out. **NUMERICAL AND EXPERIMENTAL STUDIES OF ELECTROMAGNETIC NEAR-FIELD ENERGY ABSORPTION IN MODELS OF MAN Ph.D. Thesis**
Indira Chatterjee 1981 156 p
Avail: Univ. Microfilms Order No. 8125898

The Plane Wave Spectrum approach was used to numerically evaluate the electromagnetic fields and energy absorption in models of man subjected to near-zone leakage fields. Three models were considered: a homogeneous semi-infinite slab model, a layered slab model, and an inhomogeneous 180 cell block model. The numerical results show the strong dependence of energy absorption on the characteristics of the prescribed leakage fields. Results are presented, both for plane waves at various angles of incidence and for near-zone leakage fields. The importance of phase and amplitude variations in the prescribed leakage field is evaluated. A highlight of this work is the considerably reduced energy absorption for near-field partial-body exposures as compared to that obtained for far-field exposure conditions. Experimental results supporting the validity of the empirical relationships are presented. Dissert. Abstr.

**N82-19813** Texas A&M Univ., College Station.
**CATECHOLAMINE LEVELS IN FIT AND NONFIT MALES WHEN EXPOSED TO AN EMOTIONAL STRESS Ph.D. Thesis**
Camille Jeanette Bunting 1981 123 p
Avail: Univ. Microfilms Order No. 8128877

The difference in catecholamine (CA) excretion levels and perceived anxiety levels between physically fit and nonfit human subjects when exposed to an emotional stress was studied. The differences in heart rate responses between physically fit and nonfit subjects, as well as the difference in CA excretion levels and perceived anxiety levels between individuals classified as introverts and extraverts were also studied. Rock climbing was selected as the experimental stress factor. The results of the analysis for the fit and nonfit classifications indicated significant differences in epinephrine (E) excretion levels and responses on the Spielberger State Anxiety Inventory (SSAI) between treatments, as well as significant groups x treatments interaction for norepinephrine (NE) excretion levels. Significant groups x treatments x times and treatments x times x activities interactions were found for heart rate. Analysis for the introvert and extravert classifications revealed significant differences in NE excretion levels and SSAI responses between treatments, as well as a significant groups x treatments interaction for E excretion levels. Dissert. Abstr.

**ANALYSIS OF EVAPORATIVE WATER LOSS IN THE SKYLAB ASTRONAUTS**
J. I. Leonard 19 Dec. 1977 77 p refs
(Contract NAS9-14523)
(NASA-CR-167462) Avail: NTIS HC A05/MF A01 CSCL 06P

Daily evaporative water losses (EWL) during the three Skylab missions were measured using the indirect mass and water balance techniques. A mean inflight EWL of 860 ml/day-m 2 was obtained for nine men who averaged one hour of daily exercise. Although it was expected the EWL would increase in the hypobaric environment of Skylab (1/3 atmosphere), an average decrease from preflight sea level conditions of 11 percent was measured. The results suggest that weightlessness may have been a factor in modifying EWL primarily by decreasing sweat losses during exercise and possibly by reducing insensible skin losses as well. The weightless environment apparently promotes the formation of a sweat film on the skin surface both directly, by reducing heat and mass convective flow and sweat drippage, and perhaps indirectly by inducing measurable biochemical changes resulting in high initial sweating rates. It is proposed that these high levels of skin wettedness favor sweat suppression by a previously described mechanism. Author

The cutaneous primary irritancy and allergenicity potential of cotton shirts/fabrics treated with flame retardants were evaluated in order to establish their suitability for spacecraft crew use. Twenty-five volunteer human subjects were patch tested on the back utilizing standard methodology, with both treated and untreated cotton fabric. The fabric was treated with tetrakis (hydroxymethyl) phosphonium hydroxide and subsequently cured with gaseous ammonia. The final treatment comprised adding on dicyandiamine phosphoric acid. None of the individuals experienced primary irritant or allergic reactions attributable to the fabric during induction or challenge patch testing. Likewise, there were no reactions to treated or untreated fabric patches placed on ten subjects of the usage panel at the conclusion of the study. R.J.F.

### REVIEW OF HEALTH AND SAFETY ASPECTS OF VIDEO DISPLAY TERMINALS

W. C. Treurniet Feb. 1982 39 p refs
(CRC-TN-712-E) Avail: NTIS HC A03/MF A01

The factors that contribute to worker complaints when video display terminals (VDT) are introduced into the workplace are investigated. Survey data from field experiments indicate that a number of ergonomic factors and job characteristics can contribute to reports of discomfort from VDT users. Specifically, reports of visual discomfurt are related to improper ambient lighting (which can cause bothersome reflections and contrast glare), poor display quality, and ophthalmological deficiencies. Reports of muscle pain and fatigue are related to poor workstation design such as improper heights of chair, keyboard, and display screen, and absence of source document holder, and no support for the forearms and wrists. It is noted that the frequency of such complaints is influenced by the worker's attitude regarding the job. A negative attitude arising from performing a meaningless, routine task, or from having no opportunities for career advancement, will result in more complaints due to ergonomic shortcomings. The issue of electromagnetic emissions from television displays is also considered. B.W.

### HUMAN CARDIOVASCULAR ADAPTATION TO ZERO GRAVITY

F. Bonde-Petersen, ed., B. Battrick, comp., and J. Mort, comp. Jan. 1981 64 p refs Proceedings of Symp., Copenhagen, 20-21 Apr. 1981. Sponsored in cooperation with Copenhagen Univ.
(ESA-SP-1033; ISSN-0379-6566) Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Methods for investigating the effects of weightlessness on the human body are presented, and the physiological problems caused by zero gravity are discussed. Cardiovascular and hormonal responses, incuding hemodynamic effects and posture influence, are considered. Vestibular, brain and masticatory functions are investigated. Rebreathing techniques are assessed.

**N82-19818#** Technische Univ., Berlin (West Germany).

### CURRENT VIEWS AND FUTURE PROGRAMS IN CARDIOVASCULAR PHYSIOLOGY IN SPACE

K. Kirsch *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 3-5 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A microplethysmographic method which charts fluid shifts such as those caused by sudden exposure to zero gravity is described. An ultrasonic probe, calibrated in human tissue layer thickness, measures areas where the underlying bone provides good echos. Tissue volume is calculated from the depth of the tissue cylinder between the skin surface and the bone. Measurements on subjects undergoing tilting confirm that edema occurs preferentially in the lower third of the tibia close to the ankle. Tilting the subject from a slight head down position into the upright position is followed by a decrease of tissue layer thickness above heart level, whereas below heart level the opposite occurs. The effects are reversible. Author (ESA)

### ADAPTATION TO ZERO GRAVITY AS SIMULATED BY HEAD-DOWN TILT

C. G. Blomqvist, J. V. Nixon, R. L. Johnson, and J. H. Mitchell *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 6-7 refs
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The accuracy of the head down tilt model of adaptation to zero gravity is assessed by comparing test results of subjects undergoing a 24 hr 5 deg tilt with measurements of heart rate, plasma volume, urine production, etc., obtained during and after space flight. The magnitude of the changes in body fluid distribution and the degree of post-tilt cardiovascular dysfunction closely resemble space results. Results indicate that the cardiovascular system adapts rapidly and efficiently to the central fluid shift that occurs early during exposure to zero gravity. Hemodynamic changes are transient with a nearly complete return to the control state within 6 hrs. The adaptation is achieved primarily by a diuresis and a decrease in blood volume, mediated by ADH, renin, and aldosterone inhibition. Author (ESA)

**N82-19820#** Kobenhavns Amts Sygehus i Glostrup (Denmark).

### CLINICAL PHYSIOLOGY OF THE RENIN-ANGIOTENSIN-ALDOSTERONE SYSTEM

J. Giese *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 8-9

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Methods for studying the renin-angiotensin-aldosterone system are reviewed. Plasma renin concentration measurements, referred to the international standard, are advocated as a way of standardizing measures obtained by different methods. Plasma concentration of angiotensin 2 is the most suitable measurement. Saralasin and converting enzyme inhibitors are good angiotensin 2 blockers. Tetrahydroaldosterone excretion measurement is a satisfactory method for studying aldosterone secretion.

### CARDIOVASCULAR REFLEXES DURING UPRIGHT POSITION

O. Henriksen *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 10-12 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Control systems involved in compensatory changes in vascular conductance in response to postural changes are described. Studies of blood flow regulation in subcutaneous limb tissue during changes of vascular transmural pressure are cited. Evidence suggests that constriction of the vessels in the skin contributes to the decrease in total vascular conductance in upright position. Both remote sympathetic reflex mechanisms elicited by a decrease in baroreceptor activity, and local sympathetic (axon) reflex mechanisms elicited by venous distension participate in pressure regulation during upright position. Author (ESA)

**N82-19822#** Technische Univ., Berlin (West Germany).

### VOLUME REGULATING HORMONES AND THEIR ROLE IN THE CARDIOVASCULAR ADAPTATION TO ZERO GRAVITY

L. Roecker *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 18-20 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Neurohormonal control of plasma volume is postulated. A change in blood volume is sensed by cardiovascular receptors which transmit this information up to the central nervous system. From there two main routes are involved, the antidiuretic hormone (ADH) mechanism for the water, and the sympathetic renin-angiotensin-aldosterone-system for sodium control. Diuresis measurements during water immersion, negative pressure breathing, and prolonged bed rest support this concept. Evidence suggests that ADH is the key to volume control of the circulation system, but the low physiological concentrations of ADH, especially under weightless conditions, make detection difficult. Thermal dehydration tests indicate that factors other than osmolality control ADH secretion under long term negative water balance. Author (ESA)

**N82-19823#** Nara Women's Univ. (Japan).
**CARDIOVASCULAR RESPONSES TO ISOMETRIC EXERCISE IN SITTING AND LYING POSITION**
T. Sadamoto, F. Bonde-Petersen, and Y. Suzuki *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 21-24 refs
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Cardiovascular responses to static exercises in the sitting and lying positions, which simulated 1 g and 0 g, were studied. Subjects were investigated during and after 2 min of sustained isometric exercise performed as knee extension, planter flexion or handgrip at a tension of 40% of maximum voluntary contraction. Heart rate, arterial pressure, and blood flow were recorded. In the two positions, where the force of gravity was varied but where the conditions in the exercising muscles were identical, there was a significant difference in mean arterial pressure (MAP). The effect of isometric exercise on MAP is reduced in the lying position due to the decreased sympathetic nervous activity (SNA). Increments in forearm blood flow and forearm vascular resistance indicate that the baroreceptors are active in both cases. Lower heart rate, MAP and forearm vascular resistance as well as increased forearm blood flow during rest in the lying as compared to the sitting position are attributed to differences in SNA.

**HEMODYNAMIC EFFECTS OF LOWER BODY POSITIVE PRESSURE**
F. A. Gaffney, E. R. Thal, W. F. Taylor, B. C. Bastian, J. A. Weigelt, J. M. Atkins, and C. G. Blomqvist *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 25-26 ref
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The way in which medical antishock trousers increase arterial pressure is examined. Supine and 60 deg head up tilt blood pressure, heart rate, forearm muscle flow, cardiac output and stroke volume measurements on healthy adults in garments with 10 and 100 mm Hg pressures are presented. Results show that the garment acts as a local, effective, nonpharmacologic, vasoconstrictor. In supine normovolemic subjects it raises pressure by increased afterload. During head up tilt, venous pooling in the legs decreases stroke volume and cardiac output.
Author (ESA)

**N82-19825#** Copenhagen Univ. (Denmark).
**CARDIOVASCULAR REACTIONS TO TILT AND LOWER BODY POSITIVE PRESSURE (LBPP)**
F. Bonde-Petersen, Y. Suzuki, T. Sadamoto, and T. Staehr-Johansen *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 27-29 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The difference in the reaction of the heart towards increasing total peripheral resistance passively, as during lower body positive pressure (LBPP), and actively, as during head up tilt, is examined. Standard measures were taken of subjects tilted at 25 deg (head up, head down) and in anti-g suits inflated to 60 or 120 mm Hg. For passive increase, a substantial increase in afterload does not affect cardiac output (CO). For active increase, CO is decreased without any significant increase in afterload, due to the decreased venous return. For LBPP applied in the sitting position (where venous return also is reduced) there is no increase in venous return and CO, although mean arterial pressure rises, probably due to the mechanical compression of the vascular beds in the legs.

**MEASUREMENTS OF VESTIBULAR FUNCTION**
S. Vesterhauge and K. Zilstorff *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 33-34

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Vestibular reflexes used for measuring vestibular function are discussed, including vestibular sensations, vestibular vegetative vestibulo-spinal, and vestibulo-ocular reflexes. Most human displacements consist of linear accelerations/decelerations, which stimulate otolith organs, but angular accelerations provoked by rotatory movements which stimulate the semicircular canals, give rise to more compensations, so it is on these that clinical interest centers. Understanding of the interactions between the semicircular canal otolith functions and the rest of the system is hampered by the difficulty of isolating the effect of the peripheral sense organs, since the system adapts well to defects in sensory input. Zero gravity experiments are a step towards developing more sensitive measurement techniques for vestibular functions.

**CEREBRAL HEMODYNAMICS AT ZERO GRAVITY**
J. Olesen *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 35-36 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Investigations on the effects of weightlessness and increased gravity on cerebral pressure autoregulation in man and animals are reviewed. Mean arterial blood pressure (MABP) was altered by vasoactive drugs, by a pneumatic cuff, and by posture changes. Test pilots' medical histories and the reactions of patients subjected to extirpation of external and internal jugular veins during bilateral radical dissection for neck carcinoma are considered. Artificial spinal fluid was infused into animals in order to increase intracranial pressure. Results show that cerebral blood flow is unchanged between perfusion pressures of 60 to 150 mm Hg MABP, and that substantial increases in cerebral venous pressure do not impair intellectual capacity. Therefore high g forces during ascent and weightlessness do not overload the autoregulation mechanism.

**THE ETIOLOGY OF FACIAL PAIN AS RELATED TO MASTICATORY MUSCLES**
E. Moeller *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 37-41 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The link between chewing and facial pain in subjects with functional disorders of the masticatory system was tested. Blood flow in mandibular elevators was assessed by local isotope clearance using Xenon 133. Intercuspal biting at 25% or more of full effort for 90 sec causes obstruction or impairment of blood flow in the muscles. Deliberate unilateral mastication for 90 sec in a normal subject produces post exercise hyperemia in the most vigorously acting muscles. Since the degree of activity exerted by the elevators during mastication typically exceeds 50% of full effort, only pauses between the bursts of activity in the opening movement are available for blood flow. During part of these periods stretching of the elevators limits the capacity for circulation. This suggests that impaired blood flow due to contraction is the source of the pain.

**MEASUREMENTS OF INTRA AND EXTRACELLULAR WATER SPACES AND ELECTROLYTE CONCENTRATIONS IN HUMAN SKELETAL MUSCLE**
G. Sjoegaard *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 43-44 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A method for measuring the extracellular space in small muscle biopsies was developed. For each 70 kg body weight, 2 mCi of sup 3H inulin is injected. Extracellar water content (H2Oe) is calculated from: H2Oe ml/100 g d.w. muscle tissue = (sup 3H activity/100 g d.w. muscle tissue)/(sup 3H activity/ml plasma H2O). The magnitude of H2Oe in the soleus (high % slow twitch fibers) triceps brachii (high % fast twitch) and vastus lateralis (equal number slow and fast twitch) was calculated. The total water content was 318 (298-342) ml/100 g d.w. for the three muscles. This indicates that factors other than fiber composition, e.g., the hydrostatic effect, are responsible for H2Oe magnitude differences. The method can measure reductions in muscle water spacing in the lower body caused by adaptation to zero gravity, and whether this is accompanied by electrolyte concentration changes.

**USE OF ACETYLENE REBREATHING METHOD FOR MEASURING CARDIAC OUTPUT DURING PHYSIOLOGICAL AND CLINICAL STUDIES**
C. G. Blomqvist *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 45-46 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A modification of the acetylene rebreathing method, suitable for complex or prolonged experiments which require multiple sessions, is presented. A mixture containing 0.8% C2H2, 10% He, 30% O2 with a balance of N2 for a total bag volume of 1.5 to 2.5 l is used. Six ml of C18O is added for pulmonary diffusion capacity determination. Instantaneous C2H2 concentrations are normalized with respect to He, which is not absorbed. Comparison with the standard indocyanine green indicator dilution technique reveals no systematic error. Experimentally induced stroke volume and cardiac output differences of + or - 10% to 15% can be established by standard statistical methods in groups of 5 to 10 subjects. Author (ESA)

**N82-19831#** Copenhagen Univ. (Denmark).
**A COMPARISON BETWEEN ACETYLENE AND FREON REBREATHING FOR MEASURING CARDIAC OUTPUT DURING EXERCISE**
P. Norsk, F. Bonde-Petersen, and Y. Suzuki *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 47-49 refs
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The suitability of freon rebreathing as a noninvasive measurement method in spaceborne microgravity cardiac output tests was examined. Cardiac output, oxygen uptake, blood pressure, and heart rate were measured for subjects with spontaneous, and subjects with forced respiratory rates during rebreathing. Comparison of their results shows that freon can replace acetylene if a spontaneous breathing rate is used, and if the end tidal gas fractions are corrected for changes in rebreathing volume. Inadequate mixing can be avoided by using an inert, insoluble gas. Author (ESA)

**ON-LINE, REAL-TIME DETERMINATIONS OF BREATH-TO-BREATH GAS EXCHANGE**
J. S. Lundsgaard and J. Groenlund *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 50-53 refs

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A real-time on-line system which measures respiratory gas uptake and release in noninvasive investigations of cardiac output is described. For respiration, a hot-wire anemometer connected to the computer measures true mass gas flow. The nonlinear relation between flow rate and flow signal, which differs between gases, is accounted for by a calibration table in the computer program. Another flowmeter, which measures inspiration, is connected to the first by an alternating switch. A mass spectrometer samples 20 cu cm/min flow in order to measure partial pressures. Author (ESA)

Carbon-14 labeled 1,1-DMH and 1,2-DMH of high specific activity were prepared and utilized, along with 14C-labeled MMH, to study alkylation of DNA and proteins in low passage human neonatal foreskin derived fibroblasts. When human fibroblasts were treated under conditions which would be expected to lead to a negligible number of transformation events, i.e. cells labeled were in a non-growing environment and the dose of methylhydrazine (1.6 microgram/ml) was well below the ED50 value (62-100 microgram/ml), significant differences in DNA and protein methylation were observed. For both protein and DNA, 1,2-DMH produced a higher degree of methylation than 1,1-DMH, with MMH demonstrating the lowest level. The data suggests that in these cells there are significant differences in the metabolic and/or chemical transformation of the methylhydrazines in the proposed active metabolite, methyl diazonium ion. **NONAUDITORY EFFECTS OF HIGH INTENSITY NOISE ON GROUND CREWS AT A NAVAL AIR STATION Interim Report**
David J. Hord and M. A. Coultas 1981 19 p refs
(MF58524002)
(AD-A108996; NAVHLTHRSCHC-81-27) Avail: NTIS HC A02/MF A01 CSCL 06/19

Physiological, behavioral and subjective data were obtained from 14 ground crew considered possibly to be at risk for nonauditory effects of intense noise while working around jet aircraft. Fourteen matched control subjects working in normal noise environments were given the same test protocol. Brain stem evoked potentials, eye tracking behavior, balance, and nystagmus were compared between the groups and found to be nondiscriminating. In addition, subjective mood and perceived illness were compared and found to be the same in the two groups. It was concluded that ground crew wearing the required ear protection devices do not show nonauditory effects of intense noise encountered on their jobs, and that within the confines of the variables studied, no evidence exists that current safety measures and standards are inadequate. **THE EFFECT OF VISUAL INFORMATION ON THE MANUAL APPROACH AND LANDING**
P. H. Wewerinke 16 May 1980 72 p refs
(Contract NIVR-1857)
(NLR-TR-80055-U) Avail: NTIS HC A04/MF A01

The effect of visual information combined with a basic display information on manual approach performance on the manual approach and landing task was studied. A pre-experimental, theoretical analysis in terms of the optimal control model for pilot/aircraft was performed, yielding approach performance predictions which could be compared with the experimental results of a moving base simulator program. The model provides a description of the visual perception process involved in the complex manual approach task, with predictive capability. The complex interaction of a variety of task variables is examined. Author (ESA)

**SIX DEGREE OF FREEDOM MANUAL CONTROLS STUDY REPORT Final Report**
G. M. McKinnon, A. Lippay, and M. L. King [1982] 65 p
(Contract NAS9-15939)
(NASA-CR-167532) Avail: NTIS HC A04/MF A01 CSCL 05H

The feasibility of using degree of freedom manual controls in space in an on orbit environment was determined. Several six degree of freedom controls were tested in a laboratory environment, and replica controls were used to control robot arms. The selection of six degrees of freedom as a design goal was based on the fact that six degrees are sufficient to define the location and orientation of a rigid body in space. S.L.

**THE FEASIBILITY OF MINIATURIZING THE VERSATILE PORTABLE SPEECH PROSTHESIS: A MARKET SURVEY OF COMMERCIAL PRODUCTS**

Tracy Walklet Nov. 1981 207 p
(Contract NAS2-10143; SRI Proj. 8134)
(NASA-CR-168611) Avail: NTIS HC A10/MF A01 CSCL 05H

The feasibility of a miniature versatile portable speech prosthesis (VPSP) was analyzed and information on its potential users and on other similar devices was collected. The VPSP is a device that incorporates speech synthesis technology. The objective is to provide sufficient information to decide whether there is valuable technology to contribute to the miniaturization of the VPSP. The needs of potential users are identified, the development status of technologies similar or related to those used in the VPSP are evaluated. The VPSP, a computer based speech synthesis system fits on a wheelchair. The purpose was to produce a device that provides communication assistance in educational, vocational, and social situations to speech impaired individuals. It is expected that the VPSP can be a valuable aid for persons who are also motor impaired, which explains the placement of the system on a wheelchair. E.A.K.

**HUMAN FACTORS AND THE REAL WORLD**
Bengt Bergstroem *In its* Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 7-13 refs

Avail: NTIS HC A08/MF A01

The integration of human factors in systems design and development is considered. The role of the ergonomist as an integral member of the design team is depicted. Real world limitations which sometimes prevent optimal systems from being realized are pointed out. These can be technical and economical, or political and legal constraints on design engineers. Limitations may also arise from the planning process or from scientific uncertainty as to the solvability of a problem. Common systems language and systems design criteria improve communication between specialists on the human side and on the hardware side. The identification of systems related tasks and functions has a direct influence on human performance in systems operation and determines their efficiency. Author (ESA)

**HUMAN FACTORS IN SYSTEM DEVELOPMENT: STATUS AND EVALUATION**
David Meister *In* Research Inst. of National Defence Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 15-76 refs
Avail: NTIS HC A08/MF A01

Human factors in system development as it is presently performed in the U.S. is described. What is achieved and remaining problems are discussed, indicating research requirements and how human factors research does or does not satisfy these requirements. The way in which the developmental human factors engineer performs and the kinds of information needed are determined by circumstances under which the work is done. These circumstances make demands for supporting human factors research which to a large extent are not now being satisfied. As a consequence, the developmental human factors engineer's ability to perform system development tasks is severely impaired. Author (ESA)

**ERGONOMIC CONSIDERATIONS IN PRODUCT DESIGN AND EVALUATION**
Toni Ivergaard *In* Research Inst. of National Defence Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 77-95
Avail: NTIS HC A08/MF A01

The influence of free market competition, particularly advertising and marketing constraints, on product development is assessed. The need for an ecological approach is stressed while an ergonomic design procedure is outlined. The marketing of products which are offered to consumers, including industrial users, is in some respects good and fulfils useful functions for the consumers. Still, there are many products which are potentially dangerous, unhealthy, uncomfortable, wearing or difficult to use. Ergonomics in product evaluation can help identify these problems. In many countries, the authorities feel obliged to control development in different ways. The extent and direction of these controls depends on the companies themselves investing in ergonomics as part of product development. Author (ESA)

**HUMAN FACTORS AND SAFETY IN NUCLEAR POWER PLANT OPERATION**
Jan Wirstad *In* Research Inst. of National Defence Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 97-122 refs
Avail: NTIS HC A08/MF A01

Taking the Three Mile Island accident as an example, the extent to which human factors engineering is accepted and implemented in nuclear power plant design and operation is discussed. Characteristics of process plant operator jobs are pointed out. The safety philosophy of a nuclear power plant is called into question. Human factors R and D in the U.S. and Europe are reviewed. The need to integrate human factors with plant planning, procurement and evaluation is evident. Author (ESA)

**WORK PARADIGMS IN HUMAN FACTORS RESEARCH**
Hans Furustig *In its* Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 123-135 refs

Avail: NTIS HC A08/MF A01

Reasons for studying the systems development process from a behavioral standpoint are put forward. The complexity of factors influencing systems development is examined. Indications of irrational systems development are listed. The work paradigm is defined in terms of hardware factors, personnel factors, and procedures. Means of studying systems development are outlined, i.e., participation in systems development, historical documentation, and simulation. The results of such studies can be of significant assistance in optimizing the efficiency of the development process. Author (ESA)

**HUMAN FACTORS FOR THE FUTURE: TRENDS AND SPECULATIONS**
David Meister *In* Research Inst. of National Defence Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 137-155 refs
Avail: NTIS HC A08/MF A01

Two possible scenarios for human factors (HF) utilization in the next 20 years are projected. The worst case scenario is one of status quo; it suggests that no fundamental changes in HF research and practice will occur because of the continuing inability of the HF practitioner (the developmental human factors engineer) to apply research to systems development. The best case scenario assumes that the current gap between HF research and practice will be bridged and that consequently the developmental engineer's ability to analyze, evaluate and predict will be significantly increased. Author (ESA)

**SAM: A CONFIGURABLE EXPERIMENTAL TEXT EDITOR FOR INVESTIGATING HUMAN FACTORS ISSUES IN TEXT PROCESSING AND UNDERSTANDING**
Roger W. Ehrich Sep. 1981 38 p
(Contract N00014-81-K-0143)

(AD-A109331; CSIE-81-3) Avail: NTIS HC A03/MF A01 CSCL 09/2

There are numerous behavioral issues involving human-machine communications that are exemplified by text editing applications. Examples include scanning mechanisms and information location techniques, command language design, effect of language syntax on productivity and accuracy, and the relationship of syntax to the user task model. In general, there exist little data to support design goals, and in order to formulate studies of these issues, a flexible text editing system is required. This report describes SAM, a reasonably sophisticated text editor that has table driven command language and syntax that allows reasonably easy reconfiguration for special experiments. In particular, it is straightforward to insert the metering procedures required to measure specific aspects of human performance.

**TRANSMISSION OF SINUSOIDALLY CHANGING VERTICAL SPECIFIC FORCE TO THE HEADS OF SEATED MEN MEASURED IN A FLIGHT SIMULATOR**

R. A. A. Reutlinger and J. C. vanderVaart May 1981 34 p refs

(VTH-LR-319) Avail: NTIS HC A03/MF A01

Modulus and phase lag of the transmission of vertical specific force between a flight simulator moving base and the heads of 10 male seated subjects were measured over a frequency range of 0.1 to 9 Hz. Subjects were seated unrestrained in a normal relaxed position in a pilot seat with or without seat cushions. Although there is scatter among subjects, prominent peaks at around 1.5, 6, and 10 Hz are found for the case without seat cushions. The presence of seat cushions tends to cause a single larger peak in the modulus at around 4 to 5 Hz, and a larger phase lag at higher frequencies. A modulus close to unity and no phase lag are found both with and without seat cushions at frequencies below 1 Hz. It is difficult to read cockpit instruments in the frequency range 4 to 8 Hz.

**INTERACTIONS BETWEEN HELMET MOUNTED SIGHT DISPLAY AND SENSOR PLATFORM UNDER THE INFLUENCE OF A HUMAN PILOT**

Erhard Danneberg, Ernst Kohnen, Helmut Stein, and Ulrich Stolzke Jun. 1981 182 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-746)

(DFVLR-FB-81-30) Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 37.90

For low altitude flight of helicopters at night and with poor visibility, the interaction of a helmet mounted sight display (HMS/D), a moving sensor platform and a human pilot as system user was investigated by means of laboratory, moving simulator, and flight tests. The technical potential of the HMS/D in the laboratory, the tracking accuracy achieved by the pilot on the moving simulator, and the practical application under real flight conditions are considered. Considerable improvements are possible compared to head down displays if the layout of the instrument readings and their combination with an environmental picture are favorable.

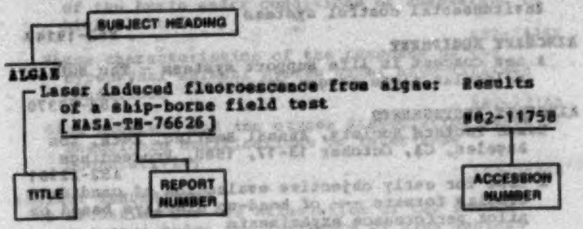
# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY/*A Continuing Bibliography (Suppl. 233)*** JUNE 1982

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABIOGENESIS**
Modeling of the synthesis of peptide-like compounds in the primeval lithosphere of the earth A82-23136
The appearance of life in the universe A82-23981

**ACCELERATION (PHYSICS)**
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255

**ACCELERATION STRESSES (PHYSIOLOGY)**
The effect of small rectilinear sign-varying accelerations on the mucous membrane of the small intestine of dogs A82-23170
Prediction of shifts in the radiation resistance of animals under the influence of various factors A82-23288
The latency of circular vection during different accelerations of the optokinetic stimulus A82-24031

**ACETYLENE**
Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies N82-19830
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831

**ACID BASE EQUILIBRIUM**
The importance of carboanhydrase in regulating the acid-base equilibrium during muscular activity A82-24485

**ACIDOSIS**
Regulation of Pa/CO2/ and ventilation in humans inspiring low levels of CO2 A82-24912

**ACRYLATES**
Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature
[PB82-110123] N82-19835

**ACTIVITY (BIOLOGY)**
Changes with age in the cholin- and adrenergic innervation of the human heart A82-23268

**ADAPTATION**
Biological rhythm aspects of adaptation mechanisms A82-23277
Features of biorhythms for patients with chronic nonspecific pulmonary diseases during adaptation to the climato-geographic conditions of the Crimea A82-24535
Individual variability in reaction norms and population adaptation --- tadpole growth in various environments A82-24537
The typological systematization of adaptive responses - Example of the antiorthostatic effect A82-24835
Human cardiovascular adaptation to zero gravity --- symposium proceedings, Copenhagen, 20-21 Apr. 1981
[ESA-SP-1033] N82-19817
Cardiovascular reflexes during upright position N82-19821
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity N82-19822

**ADAPTIVE CONTROL**
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18869

**ADENOSINE TRIPHOSPHATE**
The effects of cutting or of stretching skeletal muscle in vitro on the rates of protein synthesis and degradation A82-23244

**ADRENAL GLAND**
Phase characteristics of the response of the hypophysal-adrenal system under high-altitude conditions A82-23166
Diurnal and seasonal rhythms in adrenal cortex activity in albino rats undergoing physical training A82-23295
Effect of regulated muscular load on the morphological and functional characteristics of adrenal glands in dogs with experimental hypocorticalism A82-24524

**ADRENAL METABOLISM**
Phase characteristics of the response of the hypophysal-adrenal system under high-altitude conditions A82-23166
Effect of regulated muscular load on the morphological and functional characteristics of adrenal glands in dogs with experimental hypocorticalism A82-24524
Application of electrogustometry for the evaluation of adrenal functional conditions A82-24548

**ADRENERGICS**
Analysis of the effects of isoprenaline on the energy consumption of skeletal muscle A82-23169
Changes with age in the cholin- and adrenergic innervation of the human heart A82-23268

**AEROSPACE ENVIRONMENTS**
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266
Microorganisms and biomolecules in space hard environment N82-18267

AEROSPACE MEDICINE
  An investigation of the visual observations made by cosmonauts under experimental and actual conditions A82-23305
  Twenty years of aviation medicine serving civil aviation of the GDR A82-23469
  Combined rehabilitative and therapeutic measures in space medicine A82-24547
  Man in weightlessness - Physiological problems, clinical aspects, prevention and protection A82-24846
  Current questions in the problem of flight crew fatigue A82-25188
  Coronary risk in flight personnel: Epidemiologic approach - Incidence upon screening and prevention A82-25496
  Mechanisms of motion sickness A82-25497
  Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255
  Vestibular experiments N82-18256
  Vestibulo-spinal reflex mechanisms N82-18257
  The influence of space flight on erythrokinetics in man N82-18258
  Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
  Effects of prolonged weightlessness on the humoral immune response of humans N82-18260
  Radiation environment mapping N82-18268
  Advanced biostack experiment N82-18269

AFFERENT NERVOUS SYSTEMS
  The relation between the spontaneous activity and the dynamic characteristics of the primary afferents of the frog lateral semicircular canal A82-23645

AGE FACTOR
  The effects of age and ametropia on the dark focus of visual accommodation A82-22929
  Changes with age in the cholin- and adrenergic innervation of the human heart A82-23268
  Natural immunity in athletes of different age groups A82-24489
  Age norms of cardiac chamber volumetric parameters A82-24541
  The isoenzyme spectrum of serum lactate dehydrogenase as a function of age in healthy individuals A82-24554

AIR DEFENSE
  Evaluating operator performance on automated tactical systems A82-22908

AIR POLLUTION
  Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone [PB82-117037] N82-19811

AIR PURIFICATION
  The elimination of metabolic products in expired air in relation to the carbon dioxide content in a sealed chamber A82-23294

AIR TO SURFACE MISSILES
  Is image quality important --- predicting air-to-ground target acquisition performance with electro-optical system A82-22954

AIR TRAFFIC
  Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance [ESA-TT-691] N82-18661

AIRCRAFT CARRIERS
  Operational performance measures for carrier landing - Development and application A82-22960

AIRCRAFT DESIGN
  Method for the analysis of pilot postural behavior based on head-up - head-down simulations A82-25494
  Environmental control systems N82-19147

AIRCRAFT ENGINES
  Environmental control systems N82-19147

AIRCRAFT EQUIPMENT
  A new concept in life support systems - The NGL molecular sieve oxygen generator A82-23370

AIRCRAFT INSTRUMENTS
  Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings A82-22901
  A case for early objective evaluation of candidate display formats --- of head-up displays based on pilot performance experiments A82-22904
  What do pilots see in displays A82-22906
  Instrument scan - Is it an indicator of the pilot's workload A82-22924

AIRCRAFT LANDING
  Operational performance measures for carrier landing - Development and application A82-22960
  The effect of visual information on the manual approach and landing [NLR-TR-80055-U] N82-19836

ANTIAIRCRAFT MISSILES
Application of preference tree methodology to choice behavior in a AAA supervisory control task --- Anti-Aircraft Artillery
A82-22944

ANTIHYPERTENSIVE AGENTS
Changes in regional and central hemodynamics during the treatment of hypertensive patients with obsidan, apressin and their combination
A82-23271

ANTISEPTICS
Study of chlorine dioxide and its metabolites in man
[PB82-109356]
N82-18863

ANTISUBMARINE WARFARE AIRCRAFT
Design criteria for decision aids - The users perspective
A82-22912

APPROACH
The effect of visual information on the manual approach and landing
[NLR-TR-80055-U]
N82-19836

ARMED FORCES (FOREIGN)
Factor calculation of the test variables in use by the legal medicine institutes of the Italian Air Force
A82-24047

ARTERIES
Criterion for the evaluation of arterial pressure response to bicycle ergometer exercise during treatment for hypertension
A82-23267

Microcirculatory pathology under conditions of tissue arterial blood flow insufficiency
A82-23272

ARTERIOSCLEROSIS
Relation between high density lipoprotein cholesterol and coronary artery disease in asymptomatic men
A82-25134

ARTIFICIAL GRAVITY
Characteristics of the lifting reflex in albino rats following prolonged space flight /Effects of weightlessness and artificial gravity/
A82-23262

ARTILLERY FIRE
Application of preference tree methodology to choice behavior in a AAA supervisory control task --- Anti-Aircraft Artillery
A82-22944

ASTRONAUT PERFORMANCE
An investigation of the visual observations made by cosmonauts under experimental and actual conditions
A82-23305

The modeling of operator activity in referenceless space
A82-23306

Investigations of the visual identification of abstract spacecraft models
A82-23307

The psychological selection of French astronauts for a Franco-Soviet scientific space mission
A82-25498

ASTRONAUT TRAINING
Training for space
A82-23069

ASTRONAUTS
Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462]
N82-19814

ATHLETES
The role of sleep in the adaptation system and in the prognosis of psychological readiness of athletes in competition
A82-23279

The effect of athletic training on the mass distribution of athletes' bodies
A82-23280

Indicators of the T system of immunity during physical overstraining
A82-23281

Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes
A82-23282

The role of the vestibular analyzer in the spatial analysis of gymnastic exercises
A82-23283

Directed training of wrestlers in the biofeedback control of physical work intensity according to heat rate
A82-24480

Methodological aspects of studying the immune system in athletes
A82-24481

Quantitative criteria for evaluating the candidates granted admission and the effectiveness of athletic training among students in institutes of physical culture
A82-24483

A discussion of the nature of sports medicine
A82-24484

Training athletes to make quick decisions
A82-24487

Natural immunity in athletes of different age groups
A82-24489

Sports morphology on the rise /On the work of the Morphological Section at the International Congress 'Sports in Contemporary Society'/ A82-24499

ATMOSPHERIC COMPOSITION
Atmospheres and evolution --- of microbial life on earth A82-22981
Constraints on early life by earth's accretional and preaccretional development A82-22986
Determination of oxygen content in air on the basis of meterological parameters /pressure, temperature, and moisture/ in order to predict the hypoxic effect of the atmosphere A82-24534

ATTENTION
On the training of the sharing skills - An attention viewpoint A82-22925
The effects of social facilitation on vigilance performance A82-22963
New approaches to the electrophysiological characterization of vigilance behavior A82-22965
Modeling human attention allocation strategies with competing criteria [AD-A108509] N82-18875

ATTITUDE (INCLINATION)
Modifications in systolic time intervals induced by the transition to weightlessness A82-25495

AUDIOMETRY
The change in certain parameters of operator activity under the influence of alcohol A82-24513
A comparative study of the effects of constant and intermittent noise on the acoustic analyzer A82-24543
Measurements of tinnitus in transmission and perceptive deafness A82-24845

AUDITORY DEFECTS
Evaluation of the information content of the clinical signs and the probability of noise sickness A82-24511
A comparative study of the effects of constant and intermittent noise on the acoustic analyzer A82-24543
Measurements of tinnitus in transmission and perceptive deafness A82-24845

AUDITORY FATIGUE
Evaluation of the information content of the clinical signs and the probability of noise sickness A82-24511
A comparative study of the effects of constant and intermittent noise on the acoustic analyzer A82-24543

AUDITORY PERCEPTION
Influence of interactions of hearing and vibratory sensations on the masking effect A82-23254
Clinical-physiological characterization of the auditory-analyzer function of workers of various occupations at the Mikhailovskii concentration mill A82-24503
This strange cochlea --- laboratory investigations A82-24540
Measurements of tinnitus in transmission and perceptive deafness A82-24845
Detection and recognition - Concurrent processes in perception A82-25162

AUDITORY STIMULI
Detection and recognition - Concurrent processes in perception A82-25162

AUDITORY TASKS
Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task --- number sequence memory A82-22932

Detection and recognition - Concurrent processes in perception A82-25162

AUTOMATIC CONTROL
The controlled cultivation of plants in an artificial medium Biotechnological foundations --- Russian book A82-25230

AUTOMOBILES
Hydrogen cyanide health effects [PB82-116039] N82-18864

B

BACTERIA
Carbon isotopic fractionation in the biosynthesis of bacterial fatty acids - Ozonolysis of unsaturated fatty acids as a means of determining the intramolecular distribution of carbon isotopes A82-25372

BALANCING
The effects of a flashing light on the spectral composition of brain biopotentials and the biomechanical effectiveness of balancing A82-24837

BALLISTOCARDIOGRAPHY
Three-dimensional ballistocardiography in weightlessness N82-18262

BED REST
Cardiac function in surgical tuberculosis patients under conditions of prolonged bed rest A82-24519
Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980) [NASA-TM-81324] N82-18858

BIBLIOGRAPHIES
Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981 [NASA-CR-168553] N82-18871
Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature [PB82-110123] N82-19835

BICYCLE
A hand-operated electric bicycle ergometer A82-24486

BIOASTRONAUTICS
Man in weightlessness - Physiological problems, clinical aspects, prevention and protection A82-24846
Modifications in systolic time intervals induced by the transition to weightlessness A82-25495
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255
Vestibular experiments N82-18256
Vestibulo-spinal reflex mechanisms N82-18257
The influence of space flight on erythrokinetics in man N82-18258
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
Effects of prolonged weightlessness on the humoral immune response of humans N82-18260
Effect of weightlessness on lymphocyte proliferation N82-18261
Advanced biostack experiment N82-18269
Analysis of evaporative water loss in the Skylab astronauts [NASA-CR-167462] N82-19814

BIOCHEMISTRY
Biochemical keys to the emergence of complex life A82-22996
Changes in the activity of monoaminergic systems of the brain under conditions of adaptation to high altitude A82-23144
The role of the lung in the metabolism of vasoactive substances A82-23171

The condition of pulmonary surfactant and the ultrastructure of the blood-air barrier in acute hypoxia A82-23259
The modeling of membranes and membrane engineering --- incorporation of foreign substances into cells A82-24498
Biochemical evolution --- Book A82-25220

BIOCLIMATOLOGY
Features of biorhythms for patients with chronic nonspecific pulmonary diseases during adaptation to the climato-geographic conditions of the Crimea A82-24535

BIOCONTROL SYSTEMS
Respiratory regulation --- Russian Book A82-22400
The statistical structure of EEG rhythm interaction and individual features of brain autoregulation mechanisms A82-23643
Directed training of wrestlers in the biofeedback control of physical work intensity according to heat rate A82-24480
The role of proprioceptive afferentation in maintaining the equilibrium of unstable mechanical systems A82-24838

BIOELECTRIC POTENTIAL
Analysis of the electrographic correlates of thought activity A82-24832
The effects of a flashing light on the spectral composition of brain biopotentials and the biomechanical effectiveness of balancing A82-24837
Detection and recognition - Concurrent processes in perception A82-25162

BIOELECTRICITY
The influence of physical stress on the dynamics of work capacity and electrical activity of skeletal muscles in the course of an entire day A82-23284

BIOFLAVONOIDS
Effects of vitamin P on the enzyme spectrum of the blood serum of irradiated animals A82-24560

BIOGEOCHEMISTRY
The appearance of life in the universe A82-23981

BIOINSTRUMENTATION
Possibility of using recorder systems with a low upper frequency boundary in EEG telemetry A82-23286
Training athletes to make quick decisions A82-24487
The role of multiple recording devices in the complex equipping of functional-diagnostic facilities A82-24545
Autonomous biotechnological means for the continuous monitoring and correction of physiological systems A82-24834
Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle N82-19829

BIOLOGICAL EFFECTS
Perception and performance in the heat A82-22940
Technique for the self-stimulation of subcortical structures in immobilized rats based on biofeedback A82-23290
Biological effects of space travel /The W. Rupert Turnbull Lecture/ A82-23769
Individual variability in reaction norms and population adaptation --- tadpole growth in various environments A82-24537
The biological significance of physiological hypoxemia A82-24558
Advanced biostack experiment N82-18269
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man N82-19812

BIOLOGICAL EVOLUTION
Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979 A82-22976
Role of interfacial water and water in thin films in the origin of life A82-22980
Atmospheres and evolution --- of microbial life on earth A82-22981
Transfer RNA and the origin of protein synthesis A82-22991
Emergence and radiation of multicellular organisms A82-22992
Speculations on the evolution of intelligence in multicellular organisms A82-22993
Evolution of technological species --- development of tool use A82-22994
Biochemical keys to the emergence of complex life A82-22996
Gravity, lignification, and land plant evolution A82-22997
Evolution of man and its implications for general principles of the evolution of intelligent life A82-22998
The effect of the evolution of inherited characteristics on the stability of a predator-prey system - A mathematical model A82-24538
Biochemical evolution --- Book A82-25220

BIOLOGICAL MODELS (MATHEMATICS)
Theories of vigilance - A modern perspective A82-22964
Modeling interactions between protein molecules Investigating complexes of indole and its derivatives through infrared spectroscopy A82-23274
The effect of the evolution of inherited characteristics on the stability of a predator-prey system - A mathematical model A82-24538
Psychophysical studies of perception and memory --- Russian book A82-24901
Problems of the psychic reflection of the properties of the objective world on the sensory-perception level A82-24902
Mathematical models of detection and discrimination --- in psychophysics A82-24903
Scales of subjective intensities and judgment processes A82-24904
Selective visual adaptation and the feature model A82-24906
Mechanisms of motion sickness A82-25497

BIOLOGY
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266

BIOMETRICS
Application of electrogustometry for the evaluation of adrenal functional conditions A82-24548
Morphometric analysis of ultrastructural changes in the skeletal muscles during physical exercise in acute and chronic experiments A82-24549

BIOPHYSICS
The phase structure in the process by which a system of motions is formed in gymnasts A82-24482

BIOSYNTHESIS
Carbon isotopic fractionation in the biosynthesis of bacterial fatty acids - Ozonolysis of unsaturated fatty acids as a means of determining the intramolecular distribution of carbon isotopes A82-25372

BIOTECHNOLOGY
The modeling of membranes and membrane engineering --- incorporation of foreign substances into cells
A82-24498
The controlled cultivation of plants in an artificial medium Biotechnological foundations --- Russian book
A82-25230
BIOTELEMETRY
Possibility of using recorder systems with a low upper frequency boundary in EEG telemetry
A82-23286
BIVARIATE ANALYSIS
Bivariate response distributions in visual detection and discrimination
A82-22951
BLINDNESS
The response of the microstructure of the cerebral subcommisural organ to a change in light cycle
A82-23173
BLOOD
Reaction of the blood system to single and double exposure to a stress agent
A82-23287
Energy supply characteristics and blood protein and electrolyte content during submaximal muscular activity in bicyclists
A82-24488
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606]
N82-19810
BLOOD CIRCULATION
Vestibulovascular responses in inner ear dysfunction
A82-23255
Microcirculatory pathology under conditions of tissue arterial blood flow insufficiency
A82-23272
Neurohumoral regulation of microcirculation in ischemic illness
A82-24493
BLOOD COAGULATION
Certain neurohormonal and blood-coagulation changes in the case of early symptoms of vibration-related pathology in miners
A82-24504
BLOOD FLOW
Regulation of blood supply in the extremities during exercise in women
A82-24479
BLOOD GROUPS
Beta-acetylglucosaminidase and alpha-mannosidase activity in the blood serum of healthy people of different blood groups
A82-24556
BLOOD PLASMA
Preparation of purified erythropoietin from rabbit blood plasma
A82-23261
The blood plasma protein spectrum of dogs under treatment for hypoxia with the membrane oxygenator Sever-OMR
A82-23264
The fatty acid composition of blood serum from intact rats and rats adapted to hypoxia under the conditions of acute hypoxia
A82-24523
Circadian and seasonal rhythms in plasma androgen levels in the rhesus macaque monkey
A82-24525
Changes in blood sodium and potassium concentrations during emotional stress induced by nociceptive stimuli in rats
A82-24550
The isoenzyme spectrum of serum lactate dehydrogenase as a function of age in healthy individuals
A82-24554
Effects of vitamin P on the enzyme spectrum of the blood serum of irradiated animals
A82-24560
BLOOD PRESSURE
Criterion for the evaluation of arterial pressure response to bicycle ergometer exercise during treatment for hypertension
A82-23267
Exploration of cardiovascular function in subjects exposed to plus Gz accelerations in a human centrifuge by new noninvasive techniques
A82-24839
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness
N82-18259
BLOOD VESSELS
The role of the lung in the metabolism of vasoactive substances
A82-23171
BLOOD VOLUME
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness
N82-18259
BODY FLUIDS
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513]
N82-18859
Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462]
N82-19814
Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19816
BODY KINEMATICS
The phase structure in the process by which a system of motions is formed in gymnasts
A82-24482
BODY SIZE (BIOLOGY)
The effect of athletic training on the mass distribution of athletes' bodies
A82-23280
BODY TEMPERATURE
Application of a predictive core temperature model to heat stress experimentation
A82-22941
Core temperature, heart rate and sweatsuits
A82-22942
The regulation of body temperature during physical work
A82-24836
BONE MARROW
The effects of immobilization of mice of various radiation sensitivities and the shielding of portions of their bone marrow on survival rate and the formation of splenic colonies following irradiation
A82-23265
Lipid levels in the bone marrow megakaryocytes and thrombocytes of healthy people
A82-24555
Investigation of the effects of space flight factors on rat bone marrow cell chromosomes
A82-25321
BOREDOM
The dependence of the productivity of repetitious activity and tolerance to monotonous labor on the individual characteristics of the human operator
A82-24833
BRAIN
Speculations on the evolution of intelligence in multicellular organisms
A82-22993
Changes in the activity of monoaminergic systems of the brain under conditions of adaptation to high altitude
A82-23144
The effects of cold on catecholamine fluorescence in several structures of the rat brain
A82-23172
The response of the microstructure of the cerebral subcommisural organ to a change in light cycle
A82-23173
Changes of the catecholamine level in epinephrine-synthesizing oblongatal structures of rats, reacting differently to prolonged single immobilization
A82-23296
The statistical structure of EEG rhythm interaction and individual features of brain autoregulation mechanisms
A82-23643
Onset and offset of brain events as indices of mental chronometry
A82-24800

Characteristics of cerebral somato-sensory evoked potentials under various conditions for the formation of simple motor reactions
A82-24830

Systems analysis of the EEG during signal discrimination tasks --- alpha and beta rhythms
A82-24831

The effects of a flashing light on the spectral composition of brain biopotentials and the biomechanical effectiveness of balancing
A82-24837

**BRAIN CIRCULATION**

Additional criteria of cerebral hemodynamic disorders limiting physical loads in patients with hypertension
A82-24495

Changes in peripheral hemodynamics during transient disturbances in cerebral circulation
A82-24497

**BRAIN DAMAGE**

Changes in the posture of healthy rats after the intracranial introduction of brain extracts from animals with experimental vestibulopathy
A82-23257

Stereotactic biopsy of brain tumors based on computerized tomography
A82-24561

**BREATHING**

Respiratory regulation --- Russian Book
A82-22400

**BRIGHTNESS**

Individual differences in pulse brightness perception
A82-24032

**BUOYANCY**

The assembly of large structures in space - An evaluation of hardware configurations and assembly techniques through neutral buoyancy simulation
A82-22918

## C

**C-135 AIRCRAFT**

The measurement of aircrew task loading during operational flights
A82-22922

**CABIN ATMOSPHERES**

Environmental control systems
N82-19147

**CALCIUM METABOLISM**

Energy-dependent transport of Ca/2+/ and lipid peroxidation in sarcoplasmatic reticular muscle membranes in hypokinetic rats
A82-23258

**CANOPIES**

Canopy induced displacement evaluation --- visual displacement of targets for fighter aircraft
A82-22958

**CARBOHYDRATES**

Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553]
N82-18671

**CARBON DIOXIDE CONCENTRATION**

The elimination of metabolic products in expired air in relation to the carbon dioxide content in a sealed chamber
A82-23294

Regulation of Pa/CO2/ and ventilation in humans inspiring low levels of CO2
A82-24912

**CARBON DIOXIDE REMOVAL**

Pulmonary carbonic anhydrase in the human, monkey, and rat
A82-24917

**CARBON FIBER REINFORCED PLASTICS**

Carbon fibre reinforced epoxy prepregs and composites - Health risk aspects
A82-24823

**CARBON ISOTOPES**

Carbon isotopic fractionation in the biosynthesis of bacterial fatty acids - Ozonolysis of unsaturated fatty acids as a means of determining the intramolecular distribution of carbon isotopes
A82-25372

**CARBONIC ANHYDRASE**

The importance of carboanhydrase in regulating the acid-base equilibrium during muscular activity
A82-24885

Pulmonary carbonic anhydrase in the human, monkey, and rat
A82-24917

**CARBOXYLIC ACIDS**

The condition of certain glycolytic and tricarboxylic acid cycle enzymes in intact and denervated skeletal muscles of the rat during cooling
A82-23168

**CARCINOGENS**

Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377]
N82-18855

Chemical and molecular biological aspects alkylhydrazine-induced carcinogenesis in human cells in vitro
[AD-A109088]
N82-19833

**CARDIAC AURICLES**

Limitations of echocardiographic techniques in evaluation of left atrial masses
A82-25135

Two dimensional echocardiographic detection of intraatrial masses
A82-25136

**CARDIAC VENTRICLES**

The significance of echocardiography in the detection of left ventricular blood supply disorders during bicycle ergometry
A82-24492

Age norms of cardiac chamber volumetric parameters
A82-24541

Mechanical cardiopulmonary interdependence
A82-24915

**CARDIOLOGY**

A sino-auricular block with Samoilov-Wenkeback periods - Diagnosis with the aid of an automated analysis of the structure of heart rhythms and clinical assessment
A82-23270

**CARDIOVASCULAR SYSTEM**

Microcirculatory pathology under conditions of tissue arterial blood flow insufficiency
A82-23272

Genetic and individual differences in cardiovascular disturbances in rats during experimental emotional stress
A82-23278

Exploration of cardiovascular function in subjects exposed to plus Gz accelerations in a human centrifuge by new noninvasive techniques
A82-24839

Mechanical cardiopulmonary interdependence
A82-24915

Systemic mechanisms of emotional stress --- Russian book
A82-25231

Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818

Adaptation to zero gravity as simulated by head-down tilt
N82-19819

Clinical physiology of the renin-angiotensin-aldosterone system
N82-19820

Cardiovascular reflexes during upright position
N82-19821

Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity
N82-19822

Cardiovascular responses to isometric exercise in sitting and lying position
N82-19823

Cardiovascular reactions to tilt and lower body positive pressure (LBPP)
N82-19825

Cerebral hemodynamics at zero gravity
N82-19827

Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies
N82-19830

A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831

CATALOGS (PUBLICATIONS)
  A catalogue of Performance Evaluation Tests for Environmental Research A82-22935

CATALYTIC ACTIVITY
  Modeling of the synthesis of peptide-like compounds in the primeval lithosphere of the earth A82-23136

CATECHOLAMINES
  The effects of cold on catecholamine fluorescence in several structures of the rat brain A82-23172
  Variation in catecholamine excretion in adolescents under mountain conditions A82-23174
  Changes of the catecholamine level in epinephrine-synthesizing oblongatal structures of rats, reacting differently to prolonged single immobilization A82-23296
  Free and conjugated catecholamines and metabolites in cat urine after hypoxia A82-24913
  Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

CELLS (BIOLOGY)
  The modeling of membranes and membrane engineering --- incorporation of foreign substances into cells A82-24498

CENTRIFUGING STRESS
  Effects of gravitational atelectases on the expiratory closure of respiratory tracts A82-23260
  Exploration of cardiovascular function in subjects exposed to plus Gz accelerations in a human centrifuge by new noninvasive techniques A82-24639

CEREBRAL CORTEX
  Correlation of behavioral rest-activity phases and the characteristics of the spatial organization of cortical potentials in the case of experimental neurosis A82-23291
  Neuromorphological evidence of individual differences in human vision A82-24500
  Cerebral hemodynamics at zero gravity N82-19827

CEREBRUM
  Changes in peripheral hemodynamics during transient disturbances in cerebral circulation A82-24497
  Characteristics of the functional state of health A82-24520

CHAMBERS
  The elimination of metabolic products in expired air in relation to the carbon dioxide content in a sealed chamber A82-23294

CHARACTER RECOGNITION
  Comparison of memory tests for environmental research A82-22936

CHEMICAL BONDS
  Transfer RNA and the origin of protein synthesis A82-22991

CHEMICAL COMPOSITION
  The blood plasma protein spectrum of dogs under treatment for hypoxia with the membrane oxygenator Sever-OMB A82-23264
  The fatty acid composition of blood serum from intact rats and rats adapted to hypoxia under the conditions of acute hypoxia A82-24523

CHEMICAL EFFECTS
  Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
  [AD-A108377] N82-18855

CHEMICAL EVOLUTION
  Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979 A82-22976
  Organic chemical evolution A82-22978
  Sulfur - Fountainhead of life in the universe A82-22979
  Role of interfacial water and water in thin films in the origin of life A82-22980
  Atmospheres and evolution --- of microbial life on earth A82-22981
  Origin and evolution of continents and oceans A82-22982
  Constraints on early life by earth's accretional and preaccretional development A82-22986
  Transfer RNA and the origin of protein synthesis A82-22991
  Biochemical keys to the emergence of complex life A82-22996
  Gravity, lignification, and land plant evolution A82-22997
  Modeling of the synthesis of peptide-like compounds in the primeval lithosphere of the earth A82-23136
  The appearance of life in the universe A82-23981
  Biochemical evolution --- Book A82-25220

CHEMICAL FRACTIONATION
  Carbon isotopic fractionation in the biosynthesis of bacterial fatty acids - Ozonolysis of unsaturated fatty acids as a means of determining the intramolecular distribution of carbon isotopes A82-25372

CHLORINE COMPOUNDS
  Study of chlorine dioxide and its metabolites in man
  [PB82-109356] N82-18863

CHLORINE OXIDES
  Study of chlorine dioxide and its metabolites in man
  [PB82-109356] N82-18863

CHOLESTEROL
  Relation between high density lipoprotein cholesterol and coronary artery disease in asymptomatic men A82-25134

CHOLINERGICS
  Changes with age in the cholin- and adrenergic innervation of the human heart A82-23268

CHROMOSOMES
  Hematological and chromosomal analysis of a sample population working at radar installations A82-24843
  Investigation of the effects of space flight factors on rat bone marrow cell chromosomes A82-25321

CHRONIC CONDITIONS
  Morphometric analysis of ultrastructural changes in the skeletal muscles during physical exercise in acute and chronic experiments A82-24549

CIRCADIAN RHYTHMS
  Biological rhythm aspects of adaptation mechanisms A82-23277
  Diurnal and seasonal rhythms in adrenal cortex activity in albino rats undergoing physical training A82-23295
  Circadian rhythm of changes of phospholipid content and the activity of nonspecific phosphomonoesterases in the rat liver A82-23300
  Characteristics of the functional state of health A82-24520
  Circadian and seasonal rhythms in plasma androgen levels in the rhesus macaque monkey A82-24525
  Suprachiasmatic stimulation phase shifts rodent circadian rhythms A82-24799
  Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266

CIRCULATORY SYSTEM
  Three-dimensional ballistocardiography in weightlessness N82-18262

CIVIL AVIATION
Twenty years of aviation medicine serving civil aviation of the GDR
A82-23469

CLINICAL MEDICINE
Criterion for the evaluation of arterial pressure response to bicycle ergometer exercise during treatment for hypertension
A82-23267

A sino-auricular block with Samoilov-Wenkebach periods - Diagnosis with the aid of an automated analysis of the structure of heart rhythms and clinical assessment
A82-23270

Changes in regional and central hemodynamics during the treatment of hypertensive patients with obsidan, apressin and their combination
A82-23271

The central hemodynamics of patients with sepsis and acute renal insufficiency
A82-23276

Improving the medical care of navy personnel
A82-23301

A discussion of the nature of sports medicine
A82-24484

Changes in peripheral hemodynamics during transient disturbances in cerebral circulation
A82-24497

Clinical-physiological characterization of the auditory-analyzer function of workers of various occupations at the Mikhailovskii concentration mill
A82-24503

Progress in the study of occupational diseases at the F. F. Erisman Hygiene Research Institute in Moscow
A82-24505

Evaluation of the information content of the clinical signs and the probability of noise sickness
A82-24511

Evaluation of the effectiveness of the complex treatment of patients with ischemic heart disease by the bicycle ergometer method
A82-24517

Cardiac function in surgical tuberculosis patients under conditions of prolonged bed rest
A82-24519

Combined rehabilitative and therapeutic measures in space medicine
A82-24547

Stereotactic biopsy of brain tumors based on computerized tomography
A82-24561

Tissue hypoxia and its correction --- Russian book
A82-24910

CLOTHING
Core temperature, heart rate and sweatsuits
A82-22942

COCHLEA
This strange cochlea --- laboratory investigations
A82-24540

COCKPIT SIMULATORS
Findings from a study of tactical symbology for fighter aircraft displays
A82-22903

What do pilots see in displays
A82-22906

An application of manned simulation in crew station conceptual development
A82-22943

Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847

COCKPITS
Method for the analysis of pilot postural behavior based on head-up - head-down simulations
A82-25494

COGNITION
Evolution of man and its implications for general principles of the evolution of intelligent life
A82-22998

COLD ACCLIMATIZATION
Seasonal differences in the adaptive changes of the thermal effect of muscle contraction
A82-23647

COLOR VISION
The effect of inter-stimulus intervals on the perception of short flashes of red and green light
A82-22927

Recognition of VDU presented colors by color defective observers --- Visual Display Unit
A82-22966

COMBAT
Findings from a study of tactical symbology for fighter aircraft displays
A82-22903

COMFORT
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866

COMPATIBILITY
Evaluation of the psychological compatibility of drivers in a rally team
A82-24477

COMPETITION
The role of sleep in the adaptation system and in the prognosis of psychological readiness of athletes in competition
A82-23279

Evaluation of the psychological compatibility of drivers in a rally team
A82-24477

COMPLEX SYSTEMS
The finite intersection test - A new multivariate statistical technique applicable to the evaluation of complex systems --- of man and machine
A82-22947

The role of multiple recording devices in the complex equipping of functional-diagnostic facilities
A82-24545

A complex of instruments for psychophysiological studies
A82-24546

COMPUTER GRAPHICS
A case for early objective evaluation of candidate display formats --- of head-up displays based on pilot performance experiments
A82-22904

Computer assisted displays enabling internalization and reduction of operator workload in higher order systems, or, pushing the barrier of human control beyond second order systems
A82-22910

COMPUTER TECHNIQUES
Design criteria for decision aids - The users perspective
A82-22912

Establishing methods of investigating individual characteristics of making decisions in situations of conflict
A82-24528

Stereotactic biopsy of brain tumors based on computerized tomography
A82-24561

Statistical tools for determining fitness to fly
[AD-A108599] N82-18860

COMPUTERIZED SIMULATION
Computer simulations for fault diagnosis training - From simulation to live system performance
A82-22911

CONCORDE AIRCRAFT
Cosmic ray measurements on board the Concorde /results after four years/
A82-25500

CONDITIONS
Working conditions and health of female workers in the sawmill sections of the wood-working industry
A82-24508

CONFERENCES
Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings
A82-22901

Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979
A82-22976

Human Factors in System Development: Experiences and Trends --- conference proceedings
[FOA-A-56003-H9] N82-19839

**CONSOLES**
- Review of health and safety aspects of video display terminals [CRC-TN-712-E] N82-19816

**CONTACT DERMATITIS**
- Carbon fibre reinforced epoxy prepregs and composites - Health risk aspects A82-24823
- Evaluation of materials proposed for use in space flight [NASA-CR-167537] N82-19815

**CONTAMINANTS**
- Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone [PB82-117037] N82-19811

**CONTINENTS**
- Origin and evolution of continents and oceans A82-22982

**CONTROL SIMULATION**
- Computer assisted displays enabling internalization and reduction of operator workload in higher order systems, or, pushing the barrier of human control beyond second order systems A82-22910

**CONTROLLERS**
- Six degree of freedom manual controls study report [NASA-CR-167532] N82-19837

**COORDINATION**
- Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes A82-23282

**CORONARY ARTERY DISEASE**
- Relation between high density lipoprotein cholesterol and coronary artery disease in asymptomatic men A82-25134
- Coronary risk in flight personnel: Epidemiologic approach - Incidence upon screening and prevention A82-25496

**CORONARY CIRCULATION**
- The significance of echocardiography in the detection of left ventricular blood supply disorders during bicycle ergometry A82-24492

**CORRELATION COEFFICIENTS**
- Correlation of behavioral rest-activity phases and the characteristics of the spatial organization of cortical potentials in the case of experimental neurosis A82-23291

**CORTEXES**
- Diurnal and seasonal rhythms in adrenal cortex activity in albino rats undergoing physical training A82-23295

**CORTICOSTEROIDS**
- Certain neurohormonal and blood-coagulation changes in the case of early symptoms of vibration-related pathology in miners A82-24504

**COSMIC RAYS**
- Cosmic ray measurements on board the Concorde /results after four years/ A82-25500
- Radiation environment mapping N82-18268
- Advanced biostack experiment N82-18269

**COSMONAUTS**
- Cybernetic analysis of cardiac rhythm during a graded exercise test in Salyut-6 crew members A82-23273
- An investigation of the visual observations made by cosmonauts under experimental and actual conditions A82-23305
- The modeling of operator activity in referenceless space A82-23306

**COTTON FIBERS**
- Evaluation of materials proposed for use in space flight [NASA-CR-167537] N82-19815

**CREW STATIONS**
- An application of manned simulation in crew station conceptual development A82-22943

**CREW WORK STATIONS**
- A strength and anthropometric comparison of young men and women --- examined for work station design A82-22907

**CUES**
- Required performance levels for autocueing devices --- target acquisition in synthetic aperture radar A82-22953

**CULTIVATION**
- The controlled cultivation of plants in an artificial medium Biotechnological foundations --- Russian book A82-25230

**CYANIDES**
- Hydrogen cyanide health effects [PB82-116039] N82-18864

**CYBERNETICS**
- Cybernetic analysis of cardiac rhythm during a graded exercise test in Salyut-6 crew members A82-23273
- Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM) [NTHD-134] N82-18869

**CYTOGENESIS**
- Effect of weightlessness on lymphocyte proliferation N82-18261

**CYTOLOGY**
- Effect of weightlessness on lymphocyte proliferation N82-18261

## D

**DARKNESS**
- The effects of age and ametropia on the dark focus of visual accommodation A82-22929

**DATA ACQUISITION**
- On-line, real-time determinations of breath-to-breath gas exchange N82-19832

**DATA COMPRESSION**
- Effects of video bandwidth compression processing on operator performance in the Mini-RPV system A82-22957

**DATA PROCESSING**
- The structure of processing resources - Implications for task configuration and workload --- effects on human performance in man machine systems A82-22923
- SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding [AD-A109331] N82-19846

**DECISION MAKING**
- Design criteria for decision aids - The users perspective A82-22912
- Application of preference tree methodology to choice behavior in a AAA supervisory control task --- Anti-Aircraft Artillery A82-22944
- Training athletes to make quick decisions A82-24487
- Establishing methods of investigating individual characteristics of making decisions in situations of conflict A82-24528
- A mediation method for solving problems of 'quick-wittedness' A82-24530
- The dependence of the strategy by which a solution is sought on the type of intellection A82-24533
- Dynamic approach to the analysis of the signal detection process --- in psychophysics A82-24905
- Modeling human attention allocation strategies with competing criteria [AD-A100509] N82-18875

DEGRADATION
The effects of cutting or of stretching skeletal muscle in vitro on the rates of protein synthesis and degradation
A82-23244

DEGREES OF FREEDOM
Six degree of freedom manual controls study report
[NASA-CR-167532] N82-19837

DESCRIPTIONS
Work paradigms in human factors research
N82-19844

DESIGN ANALYSIS
Ergonomic considerations in product design and evaluation --- product adaptation to man and his real needs and abilities
N82-19842

DETECTION
Detection and recognition - Concurrent processes in perception
A82-25162

DIAGNOSIS
A sino-auricular block with Samoilov-Wenkeback periods - Diagnosis with the aid of an automated analysis of the structure of heart rhythms and clinical assessment
A82-23270
Evaluation of the information content of the clinical signs and the probability of noise sickness
A82-24511
The role of multiple recording devices in the complex equipping of functional-diagnostic facilities
A82-24545
A complex of instruments for psychophysiological studies
A82-24546
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18859

DIENCEPHALON
Neuromorphological evidence of individual differences in human vision
A82-24500

DIFFERENTIATION
Effect of weightlessness on lymphocyte proliferation
N82-18261

DIMETHYLHYDRAZINES
Chemical and molecular biological aspects alkylhydrazine-induced carcinogenesis in human cells in vitro
[AD-A109088] N82-19833

DISEASES
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18859

DISPLAY DEVICES
What do pilots see in displays
A82-22906
A strength and anthropometric comparison of young men and women --- examined for work station design
A82-22907
Computer assisted displays enabling internalization and reduction of operator workload in higher order systems, or, pushing the barrier of human control beyond second order systems
A82-22910
The event-related brain potential as an index of attention allocation in complex displays
A82-22928
Recognition of VDU presented colors by color defective observers --- Visual Display Unit
A82-22966
Review of health and safety aspects of video display terminals
[CRC-TN-712-E] N82-19816

DISTANCE
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance
[ESA-TT-691] N82-18861

DIURNAL VARIATIONS
The influence of physical stress on the dynamics of work capacity and electrical activity of skeletal muscles in the course of an entire day
A82-23284

DIVING (UNDERWATER)
Research predictions for underwater activities in the 1980's
[FOA-C-58010-H1] N82-18862

DUMMIES
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man
N82-19812

E

EAR
Vestibulovascular responses in inner ear dysfunction
A82-23255

EARTH CRUST
Origin and evolution of continents and oceans
A82-22982

EARTH HYDROSPHERE
Origin and evolution of continents and oceans
A82-22982

EARTH OBSERVATIONS (FROM SPACE)
An investigation of the visual observations made by cosmonauts under experimental and actual conditions
A82-23305

ECHOCARDIOGRAPHY
The significance of echocardiography in the detection of left ventricular blood supply disorders during bicycle ergometry
A82-24492
Limitations of echocardiographic techniques in evaluation of left atrial masses
A82-25135
Two dimensional echocardiographic detection of intraatrial masses
A82-25136

ECOLOGY
Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans
N82-19808

ECOSYSTEMS
The effect of the evolution of inherited characteristics on the stability of a predator-prey system - A mathematical model
A82-24538
The stability of a very simple freshwater ecosystem model
A82-24539

EDEMA
Renin, aldosterone, and converting enzyme during exercise and acute hypoxia in humans
A82-24914
Bradykinin-induced increase in pulmonary vascular permeability in hypoxic sheep
A82-24918

EDITING ROUTINES (COMPUTERS)
SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding
[AD-A109331] N82-19846

EDUCATION
Training athletes to make quick decisions
A82-24487

EFFERENT NERVOUS SYSTEMS
Perception and performance in the heat
A82-22940
Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes
A82-23282

EFFICIENCY
Human factors in system development: Status and evaluation
N82-19841

ELECTRIC MOTORS
Environmental control systems
N82-19187

ELECTRIC POWER PLANTS
Some indices of the functional physiological state of inspectors at a thermal power plant
A82-24515

ELECTRIC STIMULI
Reactive changes in autonomic synapses upon frequency electrostimulation
A82-23263

Criteria and the quantitative evaluation of human disturbance tolerance --- external electrical stimuli effects on athlete performance
A82-24478

ELECTRO-OPTICS
Is image quality important --- predicting air-to-ground target acquisition performance with electro-optical system
A82-22954

ELECTROCARDIOGRAPHY
Phase analysis of peripheral systemic circulation by a rheographic method
A82-24518
Cardiac function in surgical tuberculosis patients under conditions of prolonged bed rest
A82-24519
Relation between high density lipoprotein cholesterol and coronary artery disease in asymptomatic men
A82-25134

ELECTROENCEPHALOGRAPHY
Correlation of behavioral rest-activity phases and the characteristics of the spatial organization of cortical potentials in the case of experimental neurosis
A82-23291
The statistical structure of EEG rhythm interaction and individual features of brain autoregulation mechanisms
A82-23643
Onset and offset of brain events as indices of mental chronometry
A82-24800
Systems analysis of the EEG during signal discrimination tasks --- alpha and beta rhythms
A82-24831
Analysis of the electrographic correlates of thought activity
A82-24832
Objective sensometrics on the basis of the alpha-rhythm block reaction
A82-24907
Analysis of operator speed by means of neurophysiological methods
A82-24909
Detection and recognition - Concurrent processes in perception
A82-25162

ELECTROLYTE METABOLISM
Energy supply characteristics and blood protein and electrolyte content during submaximal muscular activity in bicyclists
A82-24488
Changes in blood sodium and potassium concentrations during emotional stress induced by nociceptive stimuli in rats
A82-24550

ELECTROLYTES
Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle
N82-19829

ELECTROMAGNETIC FIELDS
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man
N82-19812

ELECTROMAGNETIC RADIATION
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man
N82-19812

ELECTROMYOGRAPHY
Possibility of using recorder systems with a low upper frequency boundary in EMG telemetry
A82-23286

ELECTRONIC WARFARE
Flying skill maintenance --- for combat tasks of fighter pilot and bomber crews
A82-22915

ELECTROPHYSIOLOGY
New approaches to the electrophysiological characterization of vigilance behavior
A82-22965
Reactive changes in autonomic synapses upon frequency electrostimulation
A82-23263

The effect of the beta-adrenergic blocker propranolol and the tranquilliser seduxen on the structure of natural sleep in the cat
A82-23644
Application of electrogustometry for the evaluation of adrenal functional conditions
A82-24546

ELECTRORETINOGRAPHY
Low-level laser light effects - Long-term effects --- on visual acuity of behaviorally trained monkeys
A82-22813

EMERGENCIES
Legibility of smoke-obscured emergency exit signs
A82-22949

EMOTIONAL FACTORS
Genetic and individual differences in cardiovascular disturbances in rats during experimental emotional stress
A82-23278
Intellection and emotions
A82-24526
Changes in blood sodium and potassium concentrations during emotional stress induced by nociceptive stimuli in rats
A82-24550
Correlation of the stress protective and autonomotropic effects of mebicar
A82-24559
Systemic mechanisms of emotional stress --- Russian book
A82-25231
Catecholamine levels in fit and nonfit males when exposed to an emotional stress
N82-19813

EMULSIONS
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

ENERGY ABSORPTION
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man
N82-19812

ENERGY CONSUMPTION
Analysis of the effects of isoprenaline on the energy consumption of skeletal muscle
A82-23169

ENVIRONMENT EFFECTS
Individual variability in reaction norms and population adaptation --- tadpole growth in various environments
A82-24537
Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature
[PB82-110123] N82-19835

ENVIRONMENT MODELS
The stability of a very simple freshwater ecosystem model
A82-24539

ENVIRONMENTAL CONTROL
Environmental control systems
N82-19147

ENVIRONMENTAL LABORATORIES
A catalogue of Performance Evaluation Tests for Environmental Research
A82-22935

ENVIRONMENTAL TESTS
The effects of noise - A review --- on human performance of complex tasks
A82-22921
The validity of task analytic information to human performance research in unusual environments
A82-22931
Performance evaluation tests for environmental research /PETER/ Landolt C reading test
A82-22933
Item recognition as a Performance Evaluation Test for Environmental Research
A82-22934
A catalogue of Performance Evaluation Tests for Environmental Research
A82-22935

ENZYME ACTIVITY
The condition of certain glycolytic and tricarboxylic acid cycle enzymes in intact and denervated skeletal muscles of the rat during cooling
A82-23168

Circadian rhythm of changes of phospholipid content and the activity of nonspecific phosphomonoesterases in the rat liver
A82-23300

The importance of carbonanhydrase in regulating the acid-base equilibrium during muscular activity
A82-24485

Changes in the activity of kidney enzymes during temporary ischemia of the extremities
A82-24542

The isoenzyme spectrum of serum lactate dehydrogenase as a function of age in healthy individuals
A82-24554

Beta-acetylglucosaminidase and alpha-mannosidase activity in the blood serum of healthy people of different blood groups
A82-24556

Effects of vitamin P on the enzyme spectrum of the blood serum of irradiated animals
A82-24560

Renin, aldosterone, and converting enzyme during exercise and acute hypoxia in humans
A82-24914

ENZYMES

Clinical physiology of the renin-angiotensin-aldosterone system
N82-19820

EPIDEMIOLOGY

Coronary risk in flight personnel: Epidemiologic approach - Incidence upon screening and prevention
A82-25496

EPINEPHRINE

Morphological changes in the hematopoietic organs of rats under the influence of adrenalin
A82-23167

Changes of the catecholamine level in epinephrine-synthesizing oblongatal structures of rats, reacting differently to prolonged single immobilization
A82-23296

Free and conjugated catecholamines and metabolites in cat urine after hypoxia
A82-24913

EPOXY MATRIX COMPOSITES

Carbon fibre reinforced epoxy prepregs and composites - Health risk aspects
A82-24823

ERGOMETERS

A hand-operated electric bicycle ergometer
A82-24486

ERROR ANALYSIS

Recognition of VDU presented colors by color defective observers --- Visual Display Unit
A82-22966

ERYTHROCYTES

Preparation of purified erythropoietin from rabbit blood plasma
A82-23261

A mechanism for the stimulation of the immune response under the influence of high ambient temperature
A82-24557

The influence of space flight on erythrokinetics in man
N82-18258

ETHYL ALCOHOL

The change in certain parameters of operator activity under the influence of alcohol
A82-24513

ETIOLOGY

Mechanisms of motion sickness
A82-25497

The etiology of facial pain as related to masticatory muscles
N82-19828

EVALUATION

A system for the rapid operational evaluation of pilot performance
A82-23303

EVAPORATION

Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)

Steady state average evoked potentials as a measure of tracking difficulty
A82-22973

Characteristics of cerebral somato-sensory evoked potentials under various conditions for the formation of simple motor reactions
A82-24830

Experience with the application of the method of evoked potentials in psychophysical studies
A82-24908

EXCRETION

Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans
N82-19808

EXERCISE PHYSIOLOGY

A method for the study of the pharmacodynamics of antianginal drugs with the use of repeated exercise tests
A82-23266

Criterion for the evaluation of arterial pressure response to bicycle ergometer exercise during treatment for hypertension
A82-23267

The effect of athletic training on the mass distribution of athletes' bodies
A82-23280

The role of the vestibular analyzer in the spatial analysis of gymnastic exercises
A82-23283

Directed training of wrestlers in the biofeedback control of physical work intensity according to heat rate
A82-24480

Quantitative criteria for evaluating the candidates granted admission and the effectiveness of athletic training among students in institutes of physical culture
A82-24483

A discussion of the nature of sports medicine
A82-24484

Energy supply characteristics and blood protein and electrolyte content during submaximal muscular activity in bicyclists
A82-24488

The significance of echocardiography in the detection of left ventricular blood supply disorders during bicycle ergometry
A82-24492

Sports morphology on the rise /On the work of the Morphological Section at the International Congress 'Sports in Contemporary Society'/
A82-24499

Evaluation of the effectiveness of the complex treatment of patients with ischemic heart disease by the bicycle ergometer method
A82-24517

Combined rehabilitative and therapeutic measures in space medicine
A82-24547

The regulation of body temperature during physical work
A82-24836

Renin, aldosterone, and converting enzyme during exercise and acute hypoxia in humans
A82-24914

Heart contractility at pressure loads induced by ischemia of exercised muscle in humans
A82-24916

Ventilatory responses at rest and during exercise in marathon runners
A82-24919

Effect of muscle glycogen content on glucose uptake following exercise
A82-24921

Guinea pig soleus and gastrocnemius electromyograms at varying speeds, grades, and loads
A82-24922

Isotopic analysis of leucine and urea metabolism in exercising humans
A82-24923

EXHAUST GASES

Hydrogen cyanide health effects
[PB82-116039] N82-18864

Ammonia health effects
[PB82-116047] N82-18865

EXOBIOLOGY

Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979
A82-22976

Sulfur - Fountainhead of life in the universe
A82-22979

Evolution of man and its implications for general principles of the evolution of intelligent life
A82-22998
Characteristics of the lifting reflex in albino rats following prolonged space flight /Effects of weightlessness and artificial gravity/
A82-23262
The appearance of life in the universe
A82-23981
Mechanism of the effects of vacuum on microorganisms
A82-24551
Nutation of Helianthus Annuus in a microgravity environment
N82-18265
Microorganisms and biomolecules in space hard environment
N82-18267

**EXPERIMENTAL DESIGN**
Effect of weightlessness on lymphocyte proliferation
N82-18261
Three-dimensional ballistocardiography in weightlessness
N82-18262
Mass discrimination during weightlessness
N82-18264
Nutation of Helianthus Annuus in a microgravity environment
N82-18265

**EXPIRED AIR**
The elimination of metabolic products in expired air in relation to the carbon dioxide content in a sealed chamber
A82-23294

**EXTRATERRESTRIAL INTELLIGENCE**
Evolution of man and its implications for general principles of the evolution of intelligent life
A82-22998

**EXTRATERRESTRIAL LIFE**
Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979
A82-22976
Organic chemical evolution
A82-22978
Sulfur - Fountainhead of life in the universe
A82-22979
Emergence and radiation of multicellular organisms
A82-22992
The appearance of life in the universe
A82-23981

**EXTRAVEHICULAR ACTIVITY**
The assembly of large structures in space - An evaluation of hardware configurations and assembly techniques through neutral buoyancy simulation
A82-22918
The modeling of operator activity in referenceless space
A82-23306

**EYE (ANATOMY)**
The pharmacology of ocular hemodynamics /Review/
A82-23252
Photodamage to the rhodopsin molecule - SH-group oxidation
A82-23275

**EYE MOVEMENTS**
The effect of prolonged practice of pursuit eye movement
A82-24030

F

**FACE (ANATOMY)**
The etiology of facial pain as related to masticatory muscles
N82-19828

**FACTOR ANALYSIS**
Factor calculation of the test variables in use by the legal medicine institutes of the Italian Air Force
A82-24047

**FAILURE ANALYSIS**
Computer simulations for fault diagnosis training - From simulation to live system performance
A82-22911

**FATIGUE (BIOLOGY)**
Indicators of the T system of immunity during physical overstraining
A82-23281
The use of correlation analysis for the detection of signs of changes in the physiological condition of workers exposed to vibration
A82-24509
Psychophysiological characteristics of the fatigue state based on activation indicators
A82-24529

**FATTY ACIDS**
The fatty acid composition of blood serum from intact rats and rats adapted to hypoxia under the conditions of acute hypoxia
A82-24523
Carbon isotopic fractionation in the biosynthesis of bacterial fatty acids - Ozonolysis of unsaturated fatty acids as a means of determining the intramolecular distribution of carbon isotopes
A82-25372

**FEEDBACK**
Technique for the self-stimulation of subcortical structures in immobilized rats based on biofeedback
A82-23290

**FEMALES**
Regulation of blood supply in the extremities during exercise in women
A82-24479
Working conditions and health of female workers in the sawmill sections of the wood-working industry
A82-24508

**FIBER REINFORCED COMPOSITES**
Carbon fibre reinforced epoxy prepregs and composites - Health risk aspects
A82-24823

**FIBROBLASTS**
Chemical and molecular biological aspects alkylhydrazine-induced carcinogenesis in human cells in vitro
[AD-A109088] N82-19033

**FIGHTER AIRCRAFT**
Findings from a study of tactical symbology for fighter aircraft displays
A82-22903
Canopy induced displacement evaluation --- visual displacement of targets for fighter aircraft
A82-22956
Operational performance measures for air combat - Development and application
A82-22959

**FIRE CONTROL**
Application of preference tree methodology to choice behavior in a AAA supervisory control task --- Anti-Aircraft Artillery
A82-22944

**FITNESS**
Catecholamine levels in fit and nonfit males when exposed to an emotional stress
N82-19813

**FLAME RETARDANTS**
Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815

**FLIGHT CLOTHING**
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971)
[RAE-TR-81017] N82-18857
Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815

**FLIGHT CREWS**
Flying skill maintenance --- for combat tasks of fighter pilot and bomber crews
A82-22915
The measurement of aircrew task loading during operational flights
A82-22922
Current questions in the problem of flight crew fatigue
A82-25188
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971)
[RAE-TR-81017] N82-18857
Statistical tools for determining fitness to fly
[AD-A108599] N82-18860

**FLIGHT FATIGUE**
Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting
A82-22969

Current questions in the problem of flight crew fatigue
A82-25100

**FLIGHT FITNESS**
Cybernetic analysis of cardiac rhythm during a graded exercise test in Salyut-6 crew members
A82-23273
New ideas on the psychological selection of aircraft pilots
A82-24840
Statistical tools for determining fitness to fly
[AD-A108599] N82-18860

**FLIGHT OPERATIONS**
The measurement of aircrew task loading during operational flights
A82-22922
Development and inflight testing of a multi-media course for instructing navigation for night nap-of-the-earth flight
A82-22961

**FLIGHT PATHS**
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance
[ESA-TT-691] N82-18861

**FLIGHT SAFETY**
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance
[ESA-TT-691] N82-18861

**FLIGHT SIMULATION**
Flight simulator runway visual textural cues for landing
A82-22926
Flight parameters and observer performance in RPV target acquisition
A82-22956
Cognitive styles and the acquisition of a complex serial maneuver
A82-22962

**FLIGHT SIMULATORS**
Task analytic approach to human performance battery development
A82-22937
Old and new directions in the engineering psychology of artificial horizons and their effects on the mental hygiene of the student pilot
A82-24842

**FLIGHT TESTS**
Development and inflight testing of a multi-media course for instructing navigation for night nap-of-the-earth flight
A82-22961

**FLIGHT TRAINING**
Flying skill maintenance --- for combat tasks of fighter pilot and bomber crews
A82-22915
Development and inflight testing of a multi-media course for instructing navigation for night nap-of-the-earth flight
A82-22961

**FLUORESCENCE**
The effects of cold on catecholamine fluorescence in several structures of the rat brain
A82-23172

**FLUOROCARBONS**
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

**FLYING PERSONNEL**
Coronary risk in flight personnel: Epidemiologic approach - Incidence upon screening and prevention
A82-25496

**FOCUSING**
The effects of age and ametropia on the dark focus of visual accommodation
A82-22929

**FORCED VIBRATION**
Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847

**FORESTS**
Working conditions and health of female workers in the sawmill sections of the wood-working industry
A82-24508

**FORMAT**
A case for early objective evaluation of candidate display formats --- of head-up displays based on pilot performance experiments
A82-22908

**FOSSILS**
Emergence and radiation of multicellular organisms
A82-22995

**FREEZING**
Life sciences passive GN2 freezer thermal performance test
[NASA-CR-167546] N82-19809

**FRENCH SPACE PROGRAMS**
The psychological selection of French astronauts for a Franco-Soviet scientific space mission
A82-25498

**FREON**
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space
N82-19831

**FRESH WATER**
The stability of a very simple freshwater ecosystem model
A82-24539

**FUEL CELLS**
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858

**FUZZY SETS**
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875

**FUZZY SYSTEMS**
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875

G

**GAME THEORY**
Establishing methods of investigating individual characteristics of making decisions in situations of conflict
A82-24528
The dependence of the strategy by which a solution is sought on the type of intellection
A82-24533

**GAS CHROMATOGRAPHY**
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18859

**GAS DISSOCIATION**
High altitude and the oxygen dissociation curve of hemoglobin modifications in inter-heme cooperativity
A82-24844

**GAS EXCHANGE**
On-line, real-time determinations of breath-to-breath gas exchange
N82-19832

**GAS FLOW**
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18870

**GAS TRANSPORT**
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

**GENETIC CODE**
Biochemical keys to the emergence of complex life
A82-22996

**GENETICS**
Genetic and individual differences in cardiovascular disturbances in rats during experimental emotional stress
A82-23278
Strain difference in thermoregulation of rats surviving extreme heat
A82-24920
Investigation of the effects of space flight factors on rat bone marrow cell chromosomes
A82-25321

GENITOURINARY SYSTEM
The effectiveness of using various radioprotective agents for protecting the genital cells of male mice from the genetic effects of radiation. I - Investigation of the yield of dominant lethal mutations in postspermatogonial cells
A82-23289

GEOTROPISM
Mutation of Helianthus Annuus in a microgravity environment
N82-18265

GLANDS (ANATOMY)
Innervation of skin glands of the hedgehog /Erinaceus europaeus/ and its histochemical changes induced by hibernation
A82-25244

GLUCOSE
Effect of muscle glycogen content on glucose uptake following exercise
A82-24921

GLYCOGENS
Effect of muscle glycogen content on glucose uptake following exercise
A82-24921

GLYCOLYSIS
The condition of certain glycolytic and tricarboxylic acid cycle enzymes in intact and denervated skeletal muscles of the rat during cooling
A82-23168

GONADS
Circadian and seasonal rhythms in plasma androgen levels in the rhesus macaque monkey
A82-24525

GRAVITATIONAL EFFECTS
Gravity, lignification, and land plant evolution
A82-22997

Biological effects of space travel /The W. Rupert Turnbull Lecture/
A82-23769

Three-dimensional ballistocardiography in weightlessness
N82-18262

Mutation of Helianthus Annuus in a microgravity environment
N82-18265

GROUND CREWS
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

GROUP DYNAMICS
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875

GYRO HORIZONS
Old and new directions in the engineering psychology of artificial horizons and their effects on the mental hygiene of the student pilot
A82-24842

## H

HAND (ANATOMY)
The effects of left hand fatigue on right hand performance
A82-22970

HAZARDS
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

HEAD MOVEMENT
Method for the analysis of pilot postural behavior based on head-up - head-down simulations
A82-25494

HEAD-UP DISPLAYS
A case for early objective evaluation of candidate display formats --- of head-up displays based on pilot performance experiments
A82-22904

HEALTH
Morbidity involving a temporary loss of work capacity among drivers of automotive passenger vehicles
A82-24522

Hydrogen cyanide health effects
[PB82-116039] N82-18864

Ammonia health effects
[PB82-116047] N82-18865

HEALTH PHYSICS
Working conditions and health of female workers in the sawmill sections of the wood-working industry
A82-24508

Hematological and chromosomal analysis of a sample population working at radar installations
A82-24843

HEART DISEASES
A sino-auricular block with Samoilov-Wenkeback periods - Diagnosis with the aid of an automated analysis of the structure of heart rhythms and clinical assessment
A82-23270

The significance of echocardiography in the detection of left ventricular blood supply disorders during bicycle ergometry
A82-24492

Oxygen supply of the muscle tissue in patients with chronic ischemic heart disease during graded physical loads
A82-24496

Evaluation of the effectiveness of the complex treatment of patients with ischemic heart disease by the bicycle ergometer method
A82-24517

Limitations of echocardiographic techniques in evaluation of left atrial masses
A82-25135

HEART FUNCTION
Changes with age in the cholin- and adrenergic innervation of the human heart
A82-23268

Cybernetic analysis of cardiac rhythm during a graded exercise test in Salyut-6 crew members
A82-23273

Cardiac function in surgical tuberculosis patients under conditions of prolonged bed rest
A82-24519

Age norms of cardiac chamber volumetric parameters
A82-24541

Pathogenesis and prevention of the hypoxic contraction of the heart
A82-24552

Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies
N82-19830

A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space
N82-19831

HEART RATE
Core temperature, heart rate and sweatsuits
A82-22942

New approaches to the electrophysiological characterization of vigilance behavior
A82-22965

Directed training of wrestlers in the biofeedback control of physical work intensity according to heat rate
A82-24480

An evaluation of the total stress involved in certain types of precision work
A82-24514

Exploration of cardiovascular function in subjects exposed to plus Gz accelerations in a human centrifuge by new noninvasive techniques
A82-24839

Heart contractility at pressure loads induced by ischemia of exercised muscle in humans
A82-24916

Modifications in systolic time intervals induced by the transition to weightlessness
A82-25495

HEAT ACCLIMATIZATION
The role of aldosterone in the regulation of the water and salt balance in hot-shop workers of the metallurgical industry
A82-23251

HEAT TOLERANCE
Mental performance impairment in heat stress
A82-22939

Application of a predictive core temperature model to heat stress experimentation
A82-22941

Strain difference in thermoregulation of rats surviving extreme heat
A82-24920

**HELICOPTER CONTROL**
Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot --- helicopter low altitude flights [DFVLR-FB-81-30] N82-19848
**HELMET MOUNTED DISPLAYS**
Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot --- helicopter low altitude flights [DFVLR-FB-81-30] N82-19848
**HEMATOLOGY**
Preparation of purified erythropoietin from rabbit blood plasma A82-23261
Reaction of the blood system to single and double exposure to a stress agent A82-23287
Hematological and chromosomal analysis of a sample population working at radar installations A82-.4843
**HEMATOPOIETIC SYSTEM**
Morphological changes in the hematopoietic organs of rats under the influence of adrenalin A82-23167
**HEMODYNAMIC RESPONSES**
Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting A82-22969
Changes in regional and central hemodynamics during the treatment of hypertensive patients with obsidan, apressin and their combination A82-23271
Pathogenesis and prevention of the hypoxic contraction of the heart A82-24552
Exploration of cardiovascular function in subjects exposed to plus Gz accelerations in a human centrifuge by new noninvasive techniques A82-24839
Mechanical cardiopulmonary interdependence A82-24915
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
Hemodynamic effects of lower body positive pressure N82-19824
Cerebral hemodynamics at zero gravity N82-19827
**HEMODYNAMICS**
The pharmacology of ocular hemodynamics /Review/ A82-23252
The central hemodynamics of patients with sepsis and acute renal insufficiency A82-23276
The significance of echocardiography in the detection of left ventricular blood supply disorders during bicycle ergometry A82-24492
Neurohumoral regulation of microcirculation in ischemic illness A82-24493
Additional criteria of cerebral hemodynamic disorders limiting physical loads in patients with hypertension A82-24495
Changes in peripheral hemodynamics during transient disturbances in cerebral circulation A82-24497
Phase analysis of peripheral systemic circulation by a rheographic method A82-24518
The prognostic value of the central hemodynamic parameters in patients with acute myocardial infarction A82-24553
The typological systematization of adaptive responses - Example of the antiorthostatic effect A82-24835
The influence of space flight on erythrokinetics in man N82-18258
Three-dimensional ballistocardiography in weightlessness N82-18262
**HIBERNATION**
Innervation of skin glands of the hedgehog /Erinaceus europaeus/ and its histochemical changes induced by hibernation A82-25244
**HIGH ALTITUDE BREATHING**
Renin, aldosterone, and converting enzyme during exercise and acute hypoxia in humans A82-24914
**HIGH ALTITUDE ENVIRONMENTS**
Variation in catecholamine excretion in adolescents under mountain conditions A82-23174
High altitude and the oxygen dissociation curve of hemoglobin Modifications in inter-heme cooperativity A82-24844
**HIGH TEMPERATURE ENVIRONMENTS**
Some indices of the functional physiological state of inspectors at a thermal power plant A82-24515
A mechanism for the stimulation of the immune response under the influence of high ambient temperature A82-24557
**HIGH VACUUM**
Mechanism of the effects of vacuum on microorganisms A82-24551
**HISTOCHEMICAL ANALYSIS**
Innervation of skin glands of the hedgehog /Erinaceus europaeus/ and its histochemical changes induced by hibernation A82-25244
**HISTORIES**
Contribution to the history of the theoretical evolution of the psychological selection of aircraft pilots in Italy A82-24841
**HOMEOSTASIS**
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity N82-19822
**HORMONE METABOLISMS**
Circadian and seasonal rhythms in plasma androgen levels in the rhesus macaque monkey A82-24525
**HORMONES**
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity N82-19822
**HOT WEATHER**
Characteristics of skin function in sailors in the tropics A82-25189
**HUMAN BEHAVIOR**
The effects of social facilitation on vigilance performance A82-22963
New approaches to the electrophysiological characterization of vigilance behavior A82-22965
Problems of the psychic reflection of the properties of the objective world on the sensory-perception level A82-24902
**HUMAN BEINGS**
Intellection and emotions A82-24526
**HUMAN BODY**
Comparison of some technical methods for the evaluation of whole-body vibration A82-23400
Sports morphology on the rise /On the work of the Morphological Section at the International Congress 'Sports in Contemporary Society'/ A82-24499
The functional state of the segmental apparatus of the spinal cord in humans during local work after a short period of rest A82-24501
Lipid levels in the bone marrow megakaryocytes and thrombocytes of healthy people A82-24555

Pulmonary carbonic anhydrase in the human, monkey, and rat A82-24917

Isotopic analysis of leucine and urea metabolism in exercising humans A82-24923

Hemodynamic effects of lower body positive pressure N82-19028

Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator [VTH-LR-319] N82-19047

**HUMAN CENTRIFUGES**

Exploration of cardiovascular function in subjects exposed to plus Gz accelerations in a human centrifuge by new noninvasive techniques A82-24839

**HUMAN FACTORS ENGINEERING**

Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings A82-22901

A case for early objective evaluation of candidate display formats --- of head-up displays based on pilot performance experiments A82-22904

A strength and anthropometric comparison of young men and women --- examined for work station design A82-22907

Computer assisted displays enabling internalization and reduction of operator workload in higher order systems, or, pushing the barrier of human control beyond second order systems A82-22910

The structure of processing resources - Implications for task configuration and workload --- effects on human performance in man machine systems A82-22923

Instrument scan - Is it an indicator of the pilot's workload A82-22924

The event-related brain potential as an index of attention allocation in complex displays A82-22928

Convergence-divergence with extended practice - Three applications --- human psychomotor task correlation with external measures A82-22938

An application of manned simulation in crew station conceptual development A82-22943

Finding a needle in a haystack when you've never seen a needle - A human factors analysis of SETI A82-22950

Required performance levels for autocueing devices --- target acquisition in synthetic aperture radar A82-22953

Operational performance measures for carrier landing - Development and application A82-22960

Recognition of VDU presented colors by color defective observers --- Visual Display Unit A82-22966

Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting A82-22969

Some current issues in workload assessment A82-22971

Enhancing operator acceptance and noninterference in secondary task measures of workload A82-22972

The physiological condition of press operators A82-23285

Objectives and structure of a radiation safety service in medical institutions A82-23298

A method for automatically evaluating operator performance A82-23304

Comparison of some technical methods for the evaluation of whole-body vibration A82-23400

Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971) [RAE-TR-81017] N82-18857

Flight ergonomics in the aircraft industry personnel-ergonomic development [NBB-FB-301/S/PUB/44] N82-18872

Human engineering procedures guide [AD-A108683] N82-18873

Activities of the Committee on Human Factors: October 1, 1980 - September 30, 1981 [AD-A108606] N82-18874

Review of health and safety aspects of video display terminals [CRC-TN-712-E] N82-19016

Human Factors in System Development: Experiences and Trends --- conference proceedings [FOA-A-56003-H9] N82-19839

Human factors and the real world --- limitations on the man machine systems design process N82-19840

Human factors in system development: Status and evaluation N82-19841

Ergonomic considerations in product design and evaluation --- product adaptation to man and his real needs and abilities N82-19842

Human factors and safety in nuclear power plant operation N82-19843

Work paradigms in human factors research N82-19844

Human factors for the future: Trends and speculations N82-19845

SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding [AD-A109331] N82-19846

**HUMAN PATHOLOGY**

Vestibulovascular responses in inner ear dysfunction A82-23255

Phase phenomena in the vestibular analyzer - Vestibular recruitment A82-23256

Changes with age in the cholin- and adrenergic innervation of the human heart A82-23268

Microcirculatory pathology under conditions of tissue arterial blood flow insufficiency A82-23272

The central hemodynamics of patients with sepsis and acute renal insufficiency A82-23276

Improving the medical care of navy personnel A82-23301

Neurohumoral regulation of microcirculation in ischemic illness A82-24493

Investigation of noise sickness A82-24494

Additional criteria of cerebral hemodynamic disorders limiting physical loads in patients with hypertension A82-24495

Certain neurohormonal and blood-coagulation changes in the case of early symptoms of vibration-related pathology in miners A82-24504

Progress in the study of occupational diseases at the F. F. Erisman Hygiene Research Institute in Moscow A82-24505

The differential diagnosis of peripheral vasomotor impairments of vibrational and nonvibrational origin A82-24507

Human predictive ability in univocally determined situations for normal and pathological states A82-24532

Chronobiological aspects in the science of health resorts and physiotherapy A82-24536

Combined rehabilitative and therapeutic measures in space medicine A82-24547

The prognostic value of the central hemodynamic parameters in patients with acute myocardial infarction A82-24553

Tissue hypoxia and its correction --- Russian book A82-24910

Relation between high density lipoprotein cholesterol and coronary artery disease in asymptomatic men A82-25134
Limitations of echocardiographic techniques in evaluation of left atrial masses A82-25135
Two dimensional echocardiographic detection of intraatrial masses A82-25136
Characteristics of skin function in sailors in the tropics A82-25149

HUMAN PERFORMANCE
Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings A82-22901
The effects of noise - A review --- on human performance of complex tasks A82-22921
The structure of processing resources - Implications for task configuration and workload --- effects on human performance in man machine systems A82-22923
Selection of Performance Evaluation Tests for Environmental Research --- human performance measures A82-22930
The validity of task analytic information to human performance research in unusual environments A82-22931
A catalogue of Performance Evaluation Tests for Environmental Research A82-22935
Comparison of memory tests for environmental research A82-22936
Finding a needle in a haystack when you've never seen a needle - A human factors analysis of SETI A82-22950
The effects of social facilitation on vigilance performance A82-22963
The effects of left hand fatigue on right hand performance A82-22970
Variation in catecholamine excretion in adolescents under mountain conditions A82-23174
Vibration sensitivity of workers in the main occupations of shipbuilding A82-23299
The work capacity of seamen under an altered schedule of work and rest A82-23302
Effects of attitudes on the performance of supervisors A82-23310
The effect of prolonged practice of pursuit eye movement A82-24030
The phase structure in the process by which a system of motions is formed in gymnasts A82-24482
A mediation method for solving problems of 'quick-wittedness' A82-24530
A comparative study of the effects of constant and intermittent noise on the acoustic analyzer A82-24543
The effects of noise on the physiological condition of blood leucocytes A82-24544
The isoenzyme spectrum of serum lactate dehydrogenase as a function of age in healthy individuals A82-24554
Characteristics of cerebral somato-sensory evoked potentials under various conditions for the formation of simple motor reactions A82-24830
Regulation of Pa/CO2/ and ventilation in humans inspiring low levels of CO2 A82-24912
Renin, aldosterone, and converting enzyme during exercise and acute hypoxia in humans A82-24914
Heart contractility at pressure loads induced by ischemia of exercised muscle in humans A82-24916
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order [AD-A108721] N82-18067
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM) [NTRD-134] N82-18069

HUMAN REACTIONS
Theories of vigilance - A modern perspective A82-22964
Evaluation of the psychological compatibility of drivers in a rally team A82-24477
Establishing methods of investigating individual characteristics of making decisions in situations of conflict A82-24528
Psychophysical studies of perception and memory --- Russian book A82-24901
Scales of subjective intensities and judgment processes A82-24904
Dynamic approach to the analysis of the signal detection process --- in psychophysics A82-24905
Systemic mechanisms of emotional stress --- Russian book A82-25231
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

HUMAN TOLERANCES
Microwave and radio-frequency exposure limits A82-22435
Criteria and the quantitative evaluation of human disturbance tolerance --- external electrical stimuli effects on athlete performance A82-24478
Methodological aspects of studying the immune system in athletes A82-24481
A basis for the optimal duration of work breaks in the presence of noise of various intensities during the course of a work shift A82-24510
The relationship between the individual properties of a human operator and work efficiency and tolerance to the monotony of work A82-24531
The dependence of the productivity of repetitious activity and tolerance to monotonous labor on the individual characteristics of the human operator A82-24833

HYDRAZINES
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses [AD-A108377] N82-18855

HYDROGEN COMPOUNDS
Hydrogen cyanide health effects [PB82-116039] N82-18864

HYGIENE
Progress in the study of occupational diseases at the F. F. Erisman Hygiene Research Institute in Moscow A82-24505

HYPERCAPNIA
Regulation of Pa/CO2/ and ventilation in humans inspiring low levels of CO2 A82-24912
Ventilatory responses at rest and during exercise in marathon runners A82-24919

HYPERPNEA
Regulation of Pa/CO2/ and ventilation in humans inspiring low levels of CO2 A82-24912

HYPERTENSION
Criterion for the evaluation of arterial pressure response to bicycle ergometer exercise during treatment for hypertension A82-23267

Changes in regional and central hemodynamics during the treatment of hypertensive patients with obsidan, apressin and their combination A82-23271
Additional criteria of cerebral hemodynamic disorders limiting physical loads in patients with hypertension A82-24495
HYPERTHERMIA
Core temperature, heart rate and sweatsuits A82-22942
Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating A82-24516
Strain difference in thermoregulation of rats surviving extreme heat A82-24920
HYPOKINESIA
Use of botanical and vitamin preparations in the prevention of gastric ulcers induced in rats by immobilization, noise and vibration A82-23175
Energy-dependent transport of Ca/2+/ and lipid peroxidation in sarcoplasmatic reticular muscle membranes in hypokinetic rats A82-23258
The physiological condition of press operators A82-23285
Reaction of the blood system to single and double exposure to a stress agent A82-23287
Technique for the self-stimulation of subcortical structures in immobilized rats based on biofeedback A82-23290
Combined rehabilitative and therapeutic measures in space medicine A82-24547
HYPOTHALAMUS
Suprachiasmatic stimulation phase shifts rodent circadian rhythms A82-24759
HYPOVOLEMIA
Microcirculatory pathology under conditions of tissue arterial blood flow insufficiency A82-23272
HYPOXEMIA
The biological significance of physiological hypoxemia A82-24558
HYPOXIA
Phase characteristics of the response of the hypophysal-adrenal system under high-altitude conditions A82-23166
Variation in catecholamine excretion in adolescents under mountain conditions A82-23174
The condition of pulmonary surfactant and the ultrastructure of the blood-air barrier in acute hypoxia A82-23259
The blood plasma protein spectrum of dogs under treatment for hypoxia with the membrane oxygenator Sever-OMR A82-23264
The fatty acid composition of blood serum from intact rats and rats adapted to hypoxia under the conditions of acute hypoxia A82-24523
Determination of oxygen content in air on the basis of meterological parameters /pressure, temperature, and moisture/ in order to predict the hypoxic effect of the atmosphere A82-24534
Pathogenesis and prevention of the hypoxic contraction of the heart A82-24552
High altitude and the oxygen dissociation curve of hemoglobin Modifications in inter-heme cooperativity A82-24844
Tissue hypoxia and its correction --- Russian book A82-24910
Free and conjugated catecholamines and metabolites in cat urine after hypoxia A82-24913
Renin, aldosterone, and converting enzyme during exercise and acute hypoxia in humans A82-24914
Bradykinin-induced increase in pulmonary vascular permeability in hypoxic sheep A82-24918
Ventilatory responses at rest and during exercise in marathon runners A82-24919

I

IDENTIFYING
Investigations of the visual identification of abstract spacecraft models A82-23307
IMAGE ENHANCEMENT
Enhancement processes in the visual detection of barely perceptible targets A82-22955
IMAGE RESOLUTION
Is image quality important --- predicting air-to-ground target acquisition performance with electro-optical system A82-22954
IMMOBILIZATION
The effects of immobilization of mice of various radiation sensitivities and the shielding of portions of their bone marrow on survival rate and the formation of splenic colonies following irradiation A82-23265
Changes of the catecholamine level in epinephrine-synthesizing oblongatal structures of rats, reacting differently to prolonged single immobolization A82-23296
IMMUNITY
Indicators of the T system of immunity during physical overstraining A82-23281
Methodological aspects of studying the immune system in athletes A82-24481
Natural immunity in athletes of different age groups A82-24489
Vitamins and natural immunity A82-24490
A mechanism for the stimulation of the immune response under the influence of high ambient temperature A82-24557
Effects of prolonged weightlessness on the humoral immune response of humans N82-18260
IMMUNOLOGY
Vitamins and natural immunity A82-24490
Effect of weightlessness on lymphocyte proliferation N82-18261
IN-FLIGHT MONITORING
Instrument scan - Is it an indicator of the pilot's workload A82-22924
INDOLES
Modeling interactions between protein molecules Investigating complexes of indole and its derivatives through infrared spectroscopy A82-23274
INDUSTRIAL MANAGEMENT
Human engineering procedures guide [AD-A108643] N82-18873
INDUSTRIAL PLANTS
The role of aldosterone in the regulation of the water and salt balance in hot-shop workers of the metallurgical industry A82-23251
Investigation of noise sickness A82-24494
INDUSTRIAL SAFETY
Vibration sensitivity of workers in the main occupations of shipbuilding A82-23299
Clinical-physiological characterization of the auditory-analyzer function of workers of various occupations at the Mikhailovskii concentration mill A82-24503

Progress in the study of occupational diseases at the F. F. Erisman Hygiene Research Institute in Moscow
A82-24505

INFRARED SPECTROSCOPY
Modeling interactions between protein molecules Investigating complexes of indole and its derivatives through infrared spectroscopy
A82-23274

INSTITUTIONS
Objectives and structure of a radiation safety service in medical institutions
A82-23298

INTELLIGENCE
Speculations on the evolution of intelligence in multicellular organisms
A82-22993

INTERACTIVE CONTROL
The finite intersection test - A new multivariate statistical technique applicable to the evaluation of complex systems --- of man and machine
A82-22947

INTERNATIONAL COOPERATION
The psychological selection of French astronauts for a Franco-Soviet scientific space mission
A82-25498

INTERSTELLAR MATTER
Organic chemical evolution
A82-22978

INTESTINES
The effect of small rectilinear sign-varying accelerations on the mucous membrane of the small intestine of dogs
A82-23170

INTRACRANIAL PRESSURE
Cerebral hemodynamics at zero gravity
N82-19827

INTRAMOLECULAR STRUCTURES
Carbon isotopic fractionation in the biosynthesis of bacterial fatty acids - Ozonolysis of unsaturated fatty acids as a means of determining the intramolecular distribution of carbon isotopes
A82-25372

INTRAVEHICULAR ACTIVITY
Method for the analysis of pilot postural behavior based on head-up - head-down simulations
A82-25494

ION EXCHANGING
A new concept in life support systems - The NGL molecular sieve oxygen generator
A82-23370

ION MOTION
Energy-dependent transport of Ca/2+/ and lipid peroxidation in sarcoplasmatic reticular muscle membranes in hypokinetic rats
A82-23258

ISCHEMIA
Neurohumoral regulation of microcirculation in ischemic illness
A82-24493

Oxygen supply of the muscle tissue in patients with chronic ischemic heart disease during graded physical loads
A82-24496

Evaluation of the effectiveness of the complex treatment of patients with ischemic heart disease by the bicycle ergometer method
A82-24517

Changes in the activity of kidney enzymes during temporary ischemia of the extremities
A82-24542

Heart contractility at pressure loads induced by ischemia of exercised muscle in humans
A82-24916

ITALY
Contribution to the history of the theoretical evolution of the psychological selection of aircraft pilots in Italy
A82-24841

J

JET AIRCRAFT NOISE
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

JET ENGINE FUELS
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18855

JUDGMENTS
Scales of subjective intensities and judgment processes
A82-24904

K

KIDNEY DISEASES
Changes in the activity of kidney enzymes during temporary ischemia of the extremities
A82-24542

L

LABORATORY EQUIPMENT
A device for laboratory investigations of technical-diagnostic activity
A82-24527

LACTATES
The isoenzyme spectrum of serum lactate dehydrogenase as a function of age in healthy individuals
A82-24554

LANDING SIMULATION
Flight simulator runway visual textural cues for landing
A82-22926

LARGE SPACE STRUCTURES
The assembly of large structures in space - An evaluation of hardware configurations and assembly techniques through neutral buoyancy simulation
A82-22918

LASER OUTPUTS
Low-level laser light effects - Long-term effects --- on visual acuity of behaviorally trained monkeys
A82-22913

Changes in spectral acuity following laser irradiation
A82-22914

LEARNING THEORY
Theories of vigilance - A modern perspective
A82-22964

LEGIBILITY
Legibility of smoke-obscured emergency exit signs
A82-22949

LEUCINE
Isotopic analysis of leucine and urea metabolism in exercising humans
A82-24923

LEUKOCYTES
The effects of noise on the physiological condition of blood leucocytes
A82-24544

LIFE SCIENCES
Constraints on early life by earth's accretional and preaccretional development
A82-22986

Criteria for a healthy way of life and prerequisites for establishing it
A82-24521

Chronobiological aspects in the science of health resorts and physiotherapy
A82-24536

Life sciences passive GN2 freezer thermal performance test
[NASA-CR-167546] N82-19809

LIFE SUPPORT SYSTEMS
A new concept in life support systems - The NGL molecular sieve oxygen generator
A82-23370

Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553] N82-18871

LIGHT (VISIBLE RADIATION)
The effect of inter-stimulus intervals on the perception of short flashes of red and green light
A82-22927

Individual differences in pulse brightness perception
A82-24032

**LIGNIN**
Gravity, lignification, and land plant evolution
A82-22997
**LIMBS (ANATOMY)**
Changes in the activity of kidney enzymes during temporary ischemia of the extremities
A82-24542
**LIMNOLOGY**
The stability of a very simple freshwater ecosystem model
A82-24539
**LIPID METABOLISM**
Energy-dependent transport of Ca/2+/ and lipid peroxidation in sarcoplasmatic reticular muscle membranes in hypokinetic rats
A82-23258
Circadian rhythm of changes of phospholipid content and the activity of nonspecific phosphomonoesterases in the rat liver
A82-23300
The fatty acid composition of blood serum from intact rats and rats adapted to hypoxia under the conditions of acute hypoxia
A82-24523
**LIPIDS**
Lipid levels in the bone marrow megakaryocytes and thrombocytes of healthy people
A82-24555
**LIPOPROTEINS**
Relation between high density lipoprotein cholesterol and coronary artery disease in asymptomatic men
A82-25134
**LITHOSPHERE**
Modeling of the synthesis of peptide-like compounds in the primeval lithosphere of the earth
A82-23136
**LIVER**
Circadian rhythm of changes of phospholipid content and the activity of nonspecific phosphomonoesterases in the rat liver
A82-23300
**LONG TERM EFFECTS**
Low-level laser light effects - Long-term effects --- on visual acuity of behaviorally trained monkeys
A82-22913
Changes in spectral acuity following laser irradiation
A82-22914
**LOW ALTITUDE**
Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot --- helicopter low altitude flights
[DFVLR-FB-81-30] N82-19848
**LOW TEMPERATURE ENVIRONMENTS**
The effects of cold on catecholamine fluorescence in several structures of the rat brain
A82-23172
**LUNG MORPHOLOGY**
The condition of pulmonary surfactant and the ultrastructure of the blood-air barrier in acute hypoxia
A82-23259
**LUNGS**
Respiratory regulation --- Russian Book
A82-22400
The role of the lung in the metabolism of vasoactive substances
A82-23171
Effects of gravitational atelectases on the expiratory closure of respiratory tracts
A82-23260
Mechanical cardiopulmonary interdependence
A82-24915
**LYMPHOCYTES**
Indicators of the T system of immunity during physical overstraining
A82-23281
Methodological aspects of studying the immune system in athletes
A82-24401
Effect of weightlessness on lymphocyte proliferation
N82-18261

# M

**MALES**
Catecholamine levels in fit and nonfit males when exposed to an emotional stress
N82-19813
**MAN MACHINE SYSTEMS**
Human Factors Society, Annual Meeting, 24th, Los Angeles, CA, October 13-17, 1980, Proceedings
A82-22901
Evaluating operator performance on automated tactical systems
A82-22908
Mini-remotely piloted vehicle precision tracking evaluation
A82-22909
The measurement of aircrew task loading during operational flights
A82-22922
The structure of processing resources - Implications for task configuration and workload --- effects on human performance in man machine systems
A82-22923
The event-related brain potential as an index of attention allocation in complex displays
A82-22928
Item recognition as a Performance Evaluation Test for Environmental Research
A82-22934
An application of manned simulation in crew station conceptual development
A82-22943
Task taxonomies and modeling for system performance prediction
A82-22946
The finite intersection test - A new multivariate statistical technique applicable to the evaluation of complex systems --- of man and machine
A82-22947
Finding a needle in a haystack when you've never seen a needle - A human factors analysis of SETI
A82-22950
Cognitive styles and the acquisition of a complex aerial maneuver
A82-22962
Some current issues in workload assessment
A82-22971
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875
The effect of visual information on the manual approach and landing
[NLR-TR-80055-U] N82-19836
Human factors and the real world --- limitations on the man machine systems design process
N82-19840
SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding
[AD-A109331] N82-19846
Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot --- helicopter low altitude flights
[DFVLR-FB-81-30] N82-19848
**MANAGEMENT ANALYSIS**
Effects of attitudes on the performance of supervisors
A82-23310
**MANAGEMENT PLANNING**
Human engineering procedures guide
[AD-A108643] N82-18873
**MANAGEMENT SYSTEMS**
Flight ergonomics in the aircraft industry personnel-ergonomic development
[MBB-FE-301/S/PUB/44] N82-18872
**MANIPULATORS**
Six degree of freedom manual controls study report
[NASA-CR-167532] N82-19837
**MANNED SPACE FLIGHT**
Biological effects of space travel /The W. Rupert Turnbull Lecture/
A82-23769
Man in weightlessness - Physiological problems, clinical aspects, prevention and protection
A82-24046

MANUAL CONTROL
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order [AD-A108721] N82-18867
The effect of visual information on the manual approach and landing [BLR-TR-80055-U] N82-19836
Six degrees of freedom manual controls study report [NASA-CR-167532] N82-19837

MAP MATCHING GUIDANCE
Map interpretation and geographic orientation during map-of-the-earth flight A82-22945

MARINE ENVIRONMENTS
Characteristics of skin function in sailors in the tropics A82-25189

MARINE RESOURCES
Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans N82-19808

MASKING
Influence of interactions of hearing and vibratory sensations on the masking effect A82-23254

MATHEMATICAL MODELS
The modeling of operator activity in referenceless space A82-23306

MAXIMUM LIKELIHOOD ESTIMATES
Statistical tools for determining fitness to fly [AD-A108599] N82-18860

MEDICAL EQUIPMENT
The blood plasma protein spectrum of dogs under treatment for hypoxia with the membrane oxygenator Sever-OMN A82-23264
The role of multiple recording devices in the complex equipping of functional-diagnostic facilities A82-24545
A complex of instruments for psychophysiological studies A82-24546

MEDICAL PERSONNEL
Objectives and structure of a radiation safety service in medical institutions A82-23298

MEDICAL PHENOMENA
Research predictions for underwater activities in the 1980's [FOA-C-58010-H1] N82-18862

MEDICAL SERVICES
Improving the medical care of navy personnel A82-23301
Twenty years of aviation medicine serving civil aviation of the GDR A82-23469

MEMBRANES
The modeling of membranes and membrane engineering --- incorporation of foreign substances into cells A82-24498

MEMORY
Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task --- number sequence memory A82-22932
Comparison of memory tests for environmental research A82-22936
Psychophysical studies of perception and memory --- Russian book A82-24901
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order [AD-A108721] N82-18867

MENTAL HEALTH
Human predictive ability in univocally determined situations for normal and pathological states A82-24532
Old and new directions in the engineering psychology of artificial horizons and their effects on the mental hygiene of the student pilot A82-24842

MENTAL PERFORMANCE
Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task --- number sequence memory A82-22932
Mental performance impairment in heat stress A82-22939
Training athletes to make quick decisions A82-24487
Intellection and emotions A82-24526
A mediation method for solving problems of 'quick-wittedness' A82-24530
The dependence of the strategy by which a solution is sought on the type of intellection A82-24533
Analysis of the electrographic correlates of thought activity A82-24832

METABOLIC WASTES
The elimination of metabolic products in expired air in relation to the carbon dioxide content in a sealed chamber A82-23294
Free and conjugated catecholamines and metabolites in cat urine after hypoxia A82-24913

METABOLISM
The role of the lung in the metabolism of vasoactive substances A82-23171
The condition of several metabolic processes in operators A82-24491
Study of chlorine dioxide and its metabolites in man [PB82-109356] N82-18063

METABOLITES
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition [NASA-CR-167513] N82-18059

METALLURGY
Certain characteristics of the physiological basis of work-rest regimes for rolling mill operators A82-24506

METEOROLOGICAL PARAMETERS
Determination of oxygen content in air on the basis of meterological parameters /pressure, temperature, and moisture/ in order to predict the hypoxic effect of the atmosphere A82-24534

MICROBIOLOGY
Atmospheres and evolution --- of microbial life on earth A82-22981
Emergence and radiation of multicellular organisms A82-22992
Microcirculatory pathology under conditions of tissue arterial blood flow insufficiency A82-23272

MICROORGANISMS
Atmospheres and evolution --- of microbial life on earth A82-22981
Mechanism of the effects of vacuum on microorganisms A82-24551
Microorganisms and biomolecules in space hard environment N82-18267

MICROWAVE EQUIPMENT
Microwave and radio-frequency exposure limits A82-22435

MICROWAVES
Microwave and radio-frequency exposure limits A82-22435

MILITARY OPERATIONS
Operational performance measures for air combat - Development and application A82-22959

MILITARY PSYCHOLOGY
Contribution to the history of the theoretical evolution of the psychological selection of aircraft pilots in Italy A82-24841

MINIATURE ELECTRONIC EQUIPMENT
  The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products
  [NASA-CR-168611] N82-15836
MISSION PLANNING
  Design criteria for decision aids - The users perspective
  A82-22912
MOLECULAR BIOLOGY
  The modeling of membranes and membrane engineering --- incorporation of foreign substances into cells
  A82-24498
MOLECULAR CLOUDS
  Organic chemical evolution
  A82-22978
MOLECULAR INTERACTIONS
  Modeling interactions between protein molecules Investigating complexes of indole and its derivatives through infrared spectroscopy
  A82-23274
  Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
  [AD-A108377] N82-18855
MOLECULES
  Microorganisms and biomolecules in space hard environment
  N82-18267
MONOTONY
  The physiological condition of press operators
  A82-23285
  An evaluation of the total stress involved in certain types of precision work
  A82-24514
  The dependence of the productivity of repetitious activity and tolerance to monotonous labor on the individual characteristics of the human operator
  A82-24833
MORPHOLOGY
  Morphological changes in the hematopoietic organs of rats under the influence of adrenalin
  A82-23167
  Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating
  A82-24516
MOTION
  The phase structure in the process by which a system of motions is formed in gymnasts
  A82-24482
MOTION PERCEPTION
  The effect of prolonged practice of pursuit eye movement
  A82-24030
  The latency of circular vection during different accelerations of the optokinetic stimulus
  A82-24031
MOTION SICKNESS
  The effect of small rectilinear sign-varying accelerations on the mucous membrane of the small intestine of dogs
  A82-23170
  Mechanisms of motion sickness
  A82-25497
  Vestibular experiments
  N82-18256
MUCOUS
  The effect of small rectilinear sign-varying accelerations on the mucous membrane of the small intestine of dogs
  A82-23170
MULTIVARIATE STATISTICAL ANALYSIS
  The finite intersection test - A new multivariate statistical technique applicable to the evaluation of complex systems --- of man and machine
  A82-22947
MUSCLES
  The condition of certain glycolytic and tricarboxylic acid cycle enzymes in intact and denervated skeletal muscles of the rat during cooling
  A82-23168
  Oxygen supply of the muscle tissue in patients with chronic ischemic heart disease during graded physical loads
  A82-24496
  Guinea pig soleus and gastrocnemius electromyograms at varying speeds, grades, and loads
  A82-24922
MUSCULAR FATIGUE
  The effects of left hand fatigue on right hand performance
  A82-22970
  Cumulative fatigue over long periods caused by localized muscular movements
  A82-24502
  Heart contractility at pressure loads induced by ischemia of exercised muscle in humans
  A82-24916
  Effect of muscle glycogen content on glucose uptake following exercise
  A82-24921
MUSCULAR FUNCTION
  Analysis of the effects of isoprenaline on the energy consumption of skeletal muscle
  A82-23169
  Energy-dependent transport of Ca/2+/ and lipid peroxidation in sarcoplasmatic reticular muscle membranes in hypokinetic rats
  A82-23258
  Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes
  A82-23282
  Seasonal differences in the adaptive changes of the thermal effect of muscle contraction
  A82-23647
  The phase structure in the process by which a system of motions is formed in gymnasts
  A82-24482
  The importance of carboanhydrase in regulating the acid-base equilibrium during muscular activity
  A82-24485
MUSCULAR STRENGTH
  A strength and anthropometric comparison of young men and women --- examined for work station design
  A82-22907
  Regulation of blood supply in the extremities during exercise in women
  A82-24479
  Energy supply characteristics and blood protein and electrolyte content during submaximal muscular activity in bicyclists
  A82-24488
MUSCULOSKELETAL SYSTEM
  Analysis of the effects of isoprenaline on the energy consumption of skeletal muscle
  A82-23169
  The effects of cutting or of stretching skeletal muscle in vitro on the rates of protein synthesis and degradation
  A82-23244
  Energy-dependent transport of Ca/2+/ and lipid peroxidation in sarcoplasmatic reticular muscle membranes in hypokinetic rats
  A82-23258
  Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes
  A82-23282
  The influence of physical stress on the dynamics of work capacity and electrical activity of skeletal muscles in the course of an entire day
  A82-23284
  Morphometric analysis of ultrastructural changes in the skeletal muscles during physical exercise in acute and chronic experiments
  A82-24549
  Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle
  N82-19829
MUTATIONS
  The effectiveness of using various radioprotective agents for protecting the genital cells of male mice from the genetic effects of radiation. I - Investigation of the yield of dominant lethal mutations in postspermatogonial cells
  A82-23289
MYOCARDIAL INFARCTION
  The prognostic value of the central hemodynamic parameters in patients with acute myocardial infarction
  A82-24553

Two dimensional echocardiographic detection of intraatrial masses
A82-25136
MYOCARDIUM
Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating
A82-24516

N

NAP-OF-THE-EARTH NAVIGATION
Nap interpretation and geographic orientation during nap-of-the-earth flight
A82-22945
Development and inflight testing of a multi-media course for instructing navigation for night nap-of-the-earth flight
A82-22961
NAVY
Operational performance measures for air combat - Development and application
A82-22959
Improving the medical care of navy personnel
A82-23301
NEUROMUSCULAR TRANSMISSION
Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes
A82-23282
Guinea pig soleus and gastrocnemius electromyograms at varying speeds, grades, and loads
A82-24922
NEUROPHYSIOLOGY
Respiratory regulation --- Russian Book
A82-22400
Theories of vigilance - A modern perspective
A82-22964
Reactive changes in autonomic synapses upon frequency electrostimulation
A82-23263
Technique for the self-stimulation of subcortical structures in immobilized rats based on biofeedback
A82-23290
Neurohumoral regulation of microcirculation in ischemic illness
A82-24493
Neuromorphological evidence of individual differences in human vision
A82-24500
The functional state of the segmental apparatus of the spinal cord in humans during local work after a short period of rest
A82-24501
Analysis of the electrographic correlates of thought activity
A82-24832
Experience with the application of the method of evoked potentials in psychophysical studies
A82-24908
Analysis of operator speed by means of neurophysiological methods
A82-24909
NEUROSES
Correlation of behavioral rest-activity phases and the characteristics of the spatial organization of cortical potentials in the case of experimental neurosis
A82-23291
NEUROSPORA
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system
N82-18266
NIGHT FLIGHTS (AIRCRAFT)
Operational performance measures for carrier landing - Development and application
A82-22960
Development and inflight testing of a multi-media course for instructing navigation for night nap-of-the-earth flight
A82-22961
NIGHT VISION
The effects of age and ametropia on the dark focus of visual accommodation
A82-22929
NOISE (SOUND)
The effects of noise - A review --- on human performance of complex tasks
A82-22921
Influence of interactions of hearing and vibratory sensations on the masking effect
A82-23254
NOISE INTENSITY
Prediction of shifts in the radiation resistance of animals under the influence of various factors
A82-23288
The change in certain parameters of operator activity under the influence of alcohol
A82-24513
NOISE POLLUTION
Clinical-physiological characterization of the auditory-analyzer function of workers of various occupations at the Mikhailovskii concentration mill
A82-24503
Some indices of the functional physiological state of inspectors at a thermal power plant
A82-24515
The effects of noise on the physiological condition of blood leucocytes
A82-24544
NOISE PROPAGATION
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866
NOISE TOLERANCE
Investigation of noise sickness
A82-24494
A basis for the optimal duration of work breaks in the presence of noise of various intensities during the course of a work shift
A82-24510
Evaluation of the information content of the clinical signs and the probability of noise sickness
A82-24511
A comparative study of the effects of constant and intermittent noise on the acoustic analyzer
A82-24543
NOREPINEPHRINE
Free and conjugated catecholamines and metabolites in cat urine after hypoxia
A82-24913
NUCLEAR POWER PLANTS
Human factors and safety in nuclear power plant operation
N82-19843
NUMERICAL CONTROL
Evaluating operator performance on automated tactical systems
A82-22908
NUTATION
Nutation of Helianthus Annuus in a microgravity environment
N82-18265
NUTRITION
The condition of several metabolic processes in operators
A82-24491

O

OBSERVATION
Flight parameters and observer performance in RPV target acquisition
A82-22956
OCEANS
Origin and evolution of continents and oceans
A82-22982
OCULAR CIRCULATION
The pharmacology of ocular hemodynamics /Review/
A82-23252
ON-LINE SYSTEMS
On-line, real-time determinations of breath-to-breath gas exchange
N82-19832
ONBOARD EQUIPMENT
Design criteria for decision aids - The users perspective
A82-22912
OPERATIONAL PROBLEMS
Human factors and safety in nuclear power plant operation
N82-19843

**OPERATOR PERFORMANCE**
A strength and anthropometric comparison of young men and women --- examined for work station design A82-22907
Evaluating operator performance on automated tactical systems A82-22908
Mini-remotely piloted vehicle precision tracking evaluation A82-22909
Computer assisted displays enabling internalization and reduction of operator workload in higher order systems, or, pushing the barrier of human control beyond second order systems A82-22910
Low-level laser light effects - Long-term effects --- on visual acuity of behaviorally trained monkeys A82-22913
Changes in spectral acuity following laser irradiation A82-22914
Flying skill maintenance --- for combat tasks of fighter pilot and bomber crews A82-22915
On the training of the sharing skills - An attention viewpoint A82-22925
The event-related brain potential as an index of attention allocation in complex displays A82-22928
Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task --- number sequence memory A82-22932
An application of manned simulation in crew station conceptual development A82-22943
The finite intersection test - A new multivariate statistical technique applicable to the evaluation of complex systems --- of man and machine A82-22947
Required performance levels for autocueing devices --- target acquisition in synthetic aperture radar A82-22953
Flight parameters and observer performance in RPV target acquisition A82-22956
Effects of video bandwidth compression processing on operator performance in the Mini-RPV system A82-22957
Some current issues in workload assessment A82-22971
The physiological condition of press operators A82-23285
A system for the rapid operational evaluation of pilot performance A82-23303
Investigations of the visual identification of abstract spacecraft models A82-23307
The condition of several metabolic processes in operators A82-24491
Cumulative fatigue over long periods caused by localized muscular movements A82-24502
Clinical-physiological characterization of the auditory-analyzer function of workers of various occupations at the Mikhailovskii concentration mill A82-24503
Certain characteristics of the physiological basis of work-rest regimes for rolling mill operators A82-24506
The change in certain parameters of operator activity under the influence of alcohol A82-24513
Some indices of the functional physiological state of inspectors at a thermal power plant A82-24515
A device for laboratory investigations of technical-diagnostic activity A82-24527
Psychophysiological characteristics of the fatigue state based on activation indicators A82-24529
The relationship between the individual properties of a human operator and work efficiency and tolerance to the monotony of work A82-24531
The dependence of the productivity of repetitious activity and tolerance to monotonous labor on the individual characteristics of the human operator A82-24833
Analysis of operator speed by means of neurophysiological methods A82-24909
Modeling human attention allocation strategies with competing criteria [AD-A108509] N82-18875

**OPERATORS (PERSONNEL)**
Comparison of some technical methods for the evaluation of whole-body vibration A82-23400
Physiological and hygienic evaluation of the work of female tower crane operators A82-24512
An evaluation of the total stress involved in certain types of precision work A82-24514
Morbidity involving a temporary loss of work capacity among drivers of automotive passenger vehicles A82-24522

**OPTICAL DENSITY**
Legibility of smoke-obscured emergency exit signs A82-22949

**OPTICAL PROPERTIES**
Canopy induced displacement evaluation --- visual displacement of targets for fighter aircraft A82-22958

**OPTICAL TRACKING**
Scaling of perceived optical distortion --- physical and psychological factors of visual stimuli A82-22960

**ORBITAL ASSEMBLY**
The assembly of large structures in space - An evaluation of hardware configurations and assembly techniques through neutral buoyancy simulation A82-22918

**ORBITAL MANEUVERS**
Six degree of freedom manual controls study report [NASA-CR-167532] N82-19037

**ORGANIC CHEMISTRY**
Role of interfacial water and water in thin films in the origin of life A82-22980

**ORGANIC COMPOUNDS**
Organic chemical evolution A82-22978

**ORTHOSTATIC TOLERANCE**
The typological systematization of adaptive responses - Example of the antiorthostatic effect A82-24835

**OTOLITH ORGANS**
Measurements of vestibular function N82-19826

**OTOLOGY**
Evaluation of the information content of the clinical signs and the probability of noise sickness A82-24511

**OXYGEN BREATHING**
Determination of oxygen content in air on the basis of meterological parameters /pressure, temperature, and moisture/ in order to predict the hypoxic effect of the atmosphere A82-24534
The biological significance of physiological hypoxemia A82-24558

**OXYGEN PRODUCTION**
A new concept in life support systems - The EGL molecular sieve oxygen generator A82-23370

**OXYGEN SUPPLY EQUIPMENT**
A new concept in life support systems - The EGL molecular sieve oxygen generator A82-23370

OXYGEN TENSION
Oxygen supply of the muscle tissue in patients with chronic ischemic heart disease during graded physical loads
A82-24496
High altitude and the oxygen dissociation curve of hemoglobin Modifications in inter-heme cooperativity
A82-24844
OXYGENATION
The blood plasma protein spectrum of dogs under treatment for hypoxia with the membrane oxygenator Sever-OMR
A82-23264
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810
OXYHEMOGLOBIN
High altitude and the oxygen dissociation curve of hemoglobin Modifications in inter-heme cooperativity
A82-24844
OZONE
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811

P

PAIN
The etiology of facial pain as related to masticatory muscles
N82-19828
PALEOBIOLOGY
Emergence and radiation of multicellular organisms
A82-22992
Speculations on the evolution of intelligence in multicellular organisms
A82-22993
PARTICLE EMISSION
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18670
PARTICLES
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811
PASSENGERS
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866
PATCH TESTS
Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815
PATHOGENESIS
Pathogenesis and prevention of the hypoxic contraction of the heart
A82-24552
PATHOLOGICAL EFFECTS
Changes in the posture of healthy rats after the intracranial introduction of brain extracts from animals with experimental vestibulopathy
A82-23257
PATRIOT MISSILE
Evaluating operator performance on automated tactical systems
A82-22908
PATTERN RECOGNITION
Item recognition as a Performance Evaluation Test for Environmental Research
A82-22934
Finding a needle in a haystack when you've never seen a needle - A human factors analysis of SETI
A82-22950
Bivariate response distributions in visual detection and discrimination
A82-22951
Recognition of VDU presented colors by color defective observers --- Visual Display Unit
A82-22966
PERCEPTION
Selection of Performance Evaluation Tests for Environmental Research --- human performance measures
A82-22930
PERCEPTUAL ERRORS
The effect of inter-stimulus intervals on the perception of short flashes of red and green light
A82-22927
Perception and performance in the heat
A82-22940
Scaling of perceived optical distortion --- physical and psychological factors of visual stimuli
A82-22968
PERCEPTUAL TIME CONSTANT
Analysis of operator speed by means of neurophysiological methods
A82-24909
PERFORMANCE PREDICTION
Task taxonomies and modeling for system performance prediction
A82-22946
Is image quality important --- predicting air-to-ground target acquisition performance with electro-optical system
A82-22954
Factor calculation of the test variables in use by the legal medicine institutes of the Italian Air Force
A82-24847
PERFORMANCE TESTS
What do pilots see in displays
A82-22906
Selection of Performance Evaluation Tests for Environmental Research --- human performance measures
A82-22930
Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task --- number sequence memory
A82-22932
A catalogue of Performance Evaluation Tests for Environmental Research
A82-22935
Comparison of memory tests for environmental research
A82-22936
Task analytic approach to human performance battery development
A82-22937
The finite intersection test - A new multivariate statistical technique applicable to the evaluation of complex systems --- of man and machine
A82-22947
A method for automatically evaluating operator performance
A82-23304
PERIPHERAL CIRCULATION
Changes in peripheral hemodynamics during transient disturbances in cerebral circulation
A82-24497
The differential diagnosis of peripheral vasomotor impairments of vibrational and nonvibrational origin
A82-24507
Phase analysis of peripheral systemic circulation by a rheographic method
A82-24518
PERSONNEL MANAGEMENT
Flight ergonomics in the aircraft industry personnel-ergonomic development
[MBB-FE-301/S/PUB/44] N82-18872
PERSONNEL SELECTION
Convergence-divergence with extended practice - Three applications --- human psychomotor task correlation with external measures
A82-22938
The psychological selection of French astronauts for a Franco-Soviet scientific space mission
A82-25498
Flight ergonomics in the aircraft industry personnel-ergonomic development
[MBB-FE-301/S/PUB/44] N82-18872
PERSPIRATION
Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

PHARMACOLOGY
Analysis of the effects of isoprenaline on the energy consumption of skeletal muscle A82-23169
The pharmacology of ocular hemodynamics /Review/ A82-23252
A method for the study of the pharmacodynamics of antianginal drugs with the use of repeated exercise tests A82-23266
The effectiveness of using various radioprotective agents for protecting the genital cells of male mice from the genetic effects of radiation. I - Investigation of the yield of dominant lethal mutations in postspermatogonial cells A82-23289
Biological methods for predicting the effectiveness of psychopharmacotherapy applied to patients with schizophrenia /Review/ A82-23297
The effect of the beta-adrenergic blocker propranolol and the tranquilizer seduxen on the structure of natural sleep in the cat A82-23644
The effects of serotonin on shivering thermogenesis A82-23646
Correlation of the stress protective and autonomotropic effects of mebicar A82-24559

PHASE SHIFT
Suprachiasmatic stimulation phase shifts rodent circadian rhythms A82-24799

PHENOLOGY
Chronobiological aspects in the science of health resorts and physiotherapy A82-24536

PHOTOINTERPRETATION
Map interpretation and geographic orientation during nap-of-the-earth flight A82-22945

PHOTOOXIDATION
Photodamage to the rhodopsin molecule - SH-group oxidation A82-23275

PHYSICAL EXERCISE
Cybernetic analysis of cardiac rhythm during a graded exercise test in Salyut-6 crew members A82-23273
The effect of athletic training on the mass distribution of athletes' bodies A82-23280
Indicators of the T system of immunity during physical overstraining A82-23281
Possibility of using recorder systems with a low upper frequency boundary in EMG telemetry A82-23286
Diurnal and seasonal rhythms in adrenal cortex activity in albino rats undergoing physical training A82-23295
Criteria and the quantitative evaluation of human disturbance tolerance --- external electrical stimuli effects on athlete performance A82-24478
Directed training of wrestlers in the biofeedback control of physical work intensity according to heat rate A82-24480
The phase structure in the process by which a system of motions is formed in gymnasts A82-24482
The importance of carboanhydrase in regulating the acid-base equilibrium during muscular activity A82-24485
A hand-operated electric bicycle ergometer A82-24486
Natural immunity in athletes of different age groups A82-24489
Effect of regulated muscular load on the morphological and functional characteristics of adrenal glands in dogs with experimental hypocorticalism A82-24524
Morphometric analysis of ultrastructural changes in the skeletal muscles during physical exercise in acute and chronic experiments A82-24549
Cardiovascular responses to isometric exercise in sitting and lying position N82-19823
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831

PHYSICAL FITNESS
The role of sleep in the adaptation system and in the prognosis of psychological readiness of athletes in competition A82-23279
Quantitative criteria for evaluating the candidates granted admission and the effectiveness of athletic training among students in institutes of physical culture A82-24483
Statistical tools for determining fitness to fly [AD-A108599] N82-18860

PHYSICAL WORK
The effects of left hand fatigue on right hand performance A82-22970
The physiological condition of press operators A82-23285
The work capacity of seamen under an altered schedule of work and rest A82-23302
Regulation of blood supply in the extremities during exercise in women A82-24479
Additional criteria of cerebral hemodynamic disorders limiting physical loads in patients with hypertension A82-24495
Oxygen supply of the muscle tissue in patients with chronic ischemic heart disease during graded physical loads A82-24496
The functional state of the segmental apparatus of the spinal cord in humans during local work after a short period of rest A82-24501
Cumulative fatigue over long periods caused by localized muscular movements A82-24502
Certain neurohormonal and blood-coagulation changes in the case of early symptoms of vibration-related pathology in miners A82-24504
Working conditions and health of female workers in the sawmill sections of the wood-working industry A82-24508
Physiological and hygienic evaluation of the work of female tower crane operators A82-24512
The regulation of body temperature during physical work A82-24836

PHYSIOCHEMISTRY
Biological methods for predicting the effectiveness of psychopharmacotherapy applied to patients with schizophrenic /Review/ A82-23297

PHYSIOLOGICAL DEFENSES
Indicators of the T system of immunity during physical overstraining A82-23281
Methodological aspects of studying the immune system in athletes A82-24481
Vitamins and natural immunity A82-24490

PHYSIOLOGICAL EFFECTS
Mental performance impairment in heat stress A82-22939
Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting A82-22969
Morphological changes in the hematopoietic organs of rats under the influence of adrenalin A82-23167
The effect of small rectilinear sign-varying accelerations on the mucous membrane of the small intestine of dogs A82-23170

Changes in the temporal parameters of visual perception under the influence of psychostimulants
A82-23253
The effects of immobilization of mice of various radiation sensitivities and the shielding of portions of their bone marrow on survival rate and the formation of splenic colonies following irradiation
A82-23265
The effect of athletic training on the mass distribution of athletes' bodies
A82-23280
The influence of physical stress on the dynamics of work capacity and electrical activity of skeletal muscles in the course of an entire day
A82-23284
The physiological condition of press operators
A82-23285
Prediction of shifts in the radiation resistance of animals under the influence of various factors
A82-23288
Changes of the catecholamine level in epinephrine-synthesizing oblongatal structures of rats, reacting differently to prolonged single immobilization
A82-23296
Vibration sensitivity of workers in the main occupations of shipbuilding
A82-23299
Biological effects of space travel /The W. Rupert Turnbull Lecture/
A82-23769
A discussion of the nature of sports medicine
A82-24484
Investigation of noise sickness
A82-24494
The functional state of the segmental apparatus of the spinal cord in humans during local work after a short period of rest
A82-24501
Physiological and hygienic evaluation of the work of female tower crane operators
A82-24512
The change in certain parameters of operator activity under the influence of alcohol
A82-24513
Psychophysiological characteristics of the fatigue state based on activation indicators
A82-24529
Mechanism of the effects of vacuum on microorganisms
A82-24551
Hydrogen cyanide health effects
[PB82-116039] N82-18864
Ammonia health effects
[PB82-116047] N82-18865
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811
Catecholamine levels in fit and nonfit males when exposed to an emotional stress
N82-19813
Human cardiovascular adaptation to zero gravity --- symposium proceedings, Copenhagen, 20-21 Apr. 1981
[ESA-SP-1033] N82-19817
Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818
Adaptation to zero gravity as simulated by head-down tilt
N82-19819
Clinical physiology of the renin-angiotensin-aldosterone system
N82-19820
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity
N82-19822
Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies
N82-19830
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

PHYSIOLOGICAL FACTORS
Certain characteristics of the physiological basis of work-rest regimes for rolling mill operators
A82-24506
Some indices of the functional physiological state of inspectors at a thermal power plant
A82-24515
Characteristics of the functional state of health
A82-24520

PHYSIOLOGICAL RESPONSES
Perception and performance in the heat
A82-22940
Changes in the activity of monoaminergic systems of the brain under conditions of adaptation to high altitude
A82-23144
Phase characteristics of the response of the hypophysal-adrenal system under high-altitude conditions
A82-23166
The effects of cutting or of stretching skeletal muscle in vitro on the rates of protein synthesis and degradation
A82-23244
Phase phenomena in the vestibular analyzer - Vestibular recruitment
A82-23256
The use of correlation analysis for the detection of signs of changes in the physiological condition of workers exposed to vibration
A82-24509
Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating
A82-24516
Chronobiological aspects in the science of health resorts and physiotherapy
A82-24536
Individual variability in reaction norms and population adaptation --- tadpole growth in various environments
A82-24537
The effects of noise on the physiological condition of blood leucocytes
A82-24544
Morphometric analysis of ultrastructural changes in the skeletal muscles during physical exercise in acute and chronic experiments
A82-24549
A mechanism for the stimulation of the immune response under the influence of high ambient temperature
A82-24557
The biological significance of physiological hypoxemia
A82-24558
Autonomous biotechnological means for the continuous monitoring and correction of physiological systems
A82-24834
Man in weightlessness - Physiological problems, clinical aspects, prevention and protection
A82-24846
Objective sensometrics on the basis of the alpha-rhythm block reaction
A82-24907
Ventilatory responses at rest and during exercise in marathon runners
A82-24919
Current questions in the problem of flight crew fatigue
A82-25108
Systemic mechanisms of emotional stress --- Russian book
A82-25231
Cardiovascular responses to isometric exercise in sitting and lying position
N82-19823
Cardiovascular reactions to tilt and lower body positive pressure (LBPP)
N82-19825

PHYSIOLOGICAL TESTS
Analysis of the effects of isoprenaline on the energy consumption of skeletal muscle
A82-23169

A method for the study of the pharmacodynamics of antianginal drugs with the use of repeated exercise tests
A82-23266

Cybernetic analysis of cardiac rhythm during a graded exercise test in Salyut-6 crew members
A82-23273

Control of the number of discharges of individual motor units in skeletal muscles as a test of coordination in athletes
A82-23282

Regulation of blood supply in the extremities during exercise in women
A82-24479

This strange cochlea --- laboratory investigations
A82-24540

Beta-acetylglucosaminidase and alpha-mannosidase activity in the blood serum of healthy people of different blood groups
A82-24556

The role of proprioceptive afferentation in maintaining the equilibrium of unstable mechanical systems
A82-24838

Factor calculation of the test variables in use by the legal medicine institutes of the Italian Air Force
A82-24847

Three-dimensional ballistocardiography in weightlessness
N82-18262

Study of chlorine dioxide and its metabolites in man [PB82-109356]
N82-18863

PILOT ERROR

The validity of task analytic information to human performance research in unusual environments
A82-22931

PILOT PERFORMANCE

Findings from a study of tactical symbology for fighter aircraft displays
A82-22903

A case for early objective evaluation of candidate display formats --- of head-up displays based on pilot performance experiments
A82-22904

What do pilots see in displays
A82-22906

Flying skill maintenance --- for combat tasks of fighter pilot and bomber crews
A82-22915

Voice entry for reducing pilot workload
A82-22916

Instrument scan - Is it an indicator of the pilot's workload
A82-22924

Task analytic approach to human performance battery development
A82-22937

An integrated approach to pilot performance evaluation
A82-22948

Operational performance measures for carrier landing - Development and application
A82-22960

Cognitive styles and the acquisition of a complex aerial maneuver
A82-22962

Enhancing operator acceptance and noninterference in secondary task measures of workload
A82-22972

A system for the rapid operational evaluation of pilot performance
A82-23303

A method for automatically evaluating operator performance
A82-23304

Method for the analysis of pilot postural behavior based on head-up - head-down simulations
A82-25494

PILOT SELECTION

New ideas on the psychological selection of aircraft pilots
A82-24840

Contribution to the history of the theoretical evolution of the psychological selection of aircraft pilots in Italy
A82-24841

Coronary risk in flight personnel: Epidemiologic approach - Incidence upon screening and prevention
A82-25496

PILOT TRAINING

Computer simulations for fault diagnosis training - From simulation to live system performance
A82-22911

The validity of task analytic information to human performance research in unusual environments
A82-22931

Task analytic approach to human performance battery development
A82-22937

An integrated approach to pilot performance evaluation
A82-22948

Operational performance measures for air combat - Development and application
A82-22959

Old and new directions in the engineering psychology of artificial horizons and their effects on the mental hygiene of the student pilot
A82-24842

PLANETARY ENVIRONMENTS

Emergence and radiation of multicellular organisms
A82-22992

Speculations on the evolution of intelligence in multicellular organisms
A82-22993

PLANETARY EVOLUTION

Origin and evolution of continents and oceans
A82-22982

Constraints on early life by earth's accretional and preaccretional development
A82-22986

PLANKTON

Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans
N82-19808

PLANTS (BOTANY)

Gravity, lignification, and land plant evolution
A82-22997

The controlled cultivation of plants in an artificial medium Biotechnological foundations --- Russian book
A82-25230

PLETHYSMOGRAPHY

Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818

POINTING CONTROL SYSTEMS

Mini-remotely piloted vehicle precision tracking evaluation
A82-22909

POLYPEPTIDES

Modeling of the synthesis of peptide-like compounds in the primeval lithosphere of the earth
A82-23136

Clinical physiology of the renin-angiotensin-aldosterone system
N82-19820

PORTABLE EQUIPMENT

Autonomous biotechnological means for the continuous monitoring and correction of physiological systems
A82-24834

POSITION (LOCATION)

Cardiovascular reflexes during upright position
N82-19821

POSTFLIGHT ANALYSIS

STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report [NASA-TM-82457]
N82-18870

POSTMISSION ANALYSIS (SPACECRAFT)

Mission operation report: Space Shuttle program. STS-2 postflight medical operations [NASA-TM-84135]
N82-18858

POSTURE

Changes in the posture of healthy rats after the intracranial introduction of brain extracts from animals with experimental vestibulopathy
A82-23257

The role of proprioceptive afferentation in maintaining the equilibrium of unstable mechanical systems
A82-24838

Method for the analysis of pilot postural behavior based on head-up - head-down simulations A82-25494

Vestibulo-spinal reflex mechanisms N82-18257

Cardiovascular reflexes during upright position N82-19821

POTABLE WATER

Mission operation report: Space Shuttle program. STS-2 postflight medical operations [NASA-TM-84135] N82-18858

POTASSIUM

Changes in blood sodium and potassium concentrations during emotional stress induced by nociceptive stimuli in rats A82-24550

PREDICTION ANALYSIS TECHNIQUES

Human predictive ability in univocally determined situations for normal and pathological states A82-24532

PRESSURE BREATHING

Mechanical cardiopulmonary interdependence A82-24915

PRESSURE EFFECTS

Hemodynamic effects of lower body positive pressure N82-19824

Cardiovascular reactions to tilt and lower body positive pressure (LBPP) N82-19825

PRIMITIVE EARTH ATMOSPHERE

Atmospheres and evolution --- of microbial life on earth A82-22981

Constraints on early life by earth's accretional and preaccretional development A82-22986

PRIORITIES

Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order [AD-A108721] N82-18867

PRODUCT DEVELOPMENT

Ergonomic considerations in product design and evaluation --- product adaptation to man and his real needs and abilities N82-19842

PROGNOSIS

Biological methods for predicting the effectiveness of psychopharmacotherapy applied to patients with schizophrenia /Review/ A82-23297

The prognostic value of the central hemodynamic parameters in patients with acute myocardial infarction A82-24553

PROJECT SETI

Finding a needle in a haystack when you've never seen a needle - A human factors analysis of SETI A82-22950

PROPHYLAXIS

Use of botanical and vitamin preparations in the prevention of gastric ulcers induced in rats by immobilization, noise and vibration A82-23175

PROPRIOCEPTION

The role of proprioceptive afferentation in maintaining the equilibrium of unstable mechanical systems A82-24838

Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM) [WTHD-134] N82-18869

PROSTHETIC DEVICES

The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products [NASA-CR-168611] N82-19838

PROTEIN METABOLISM

The effects of cutting or of stretching skeletal muscle in vitro on the rates of protein synthesis and degradation A82-23244

Energy supply characteristics and blood protein and electrolyte content during submaximal muscular activity in bicyclists A82-24488

Isotopic analysis of leucine and urea metabolism in exercising humans A82-24923

PROTEIN SYNTHESIS

Transfer RNA and the origin of protein synthesis A82-22991

Biochemical keys,to the emergence of complex life A82-22996

The effects of cutting or of stretching skeletal muscle in vitro on the rates of protein synthesis and degradation A82-23244

PROTEINS

The blood plasma protein spectrum of dogs under treatment for hypoxia with the membrane oxygenator Sever-OMB A82-23264

Modeling interactions between protein molecules Investigating complexes of indole and its derivatives through infrared spectroscopy A82-23274

PROTOBIOLOGY

Transfer RNA and the origin of protein synthesis A82-22991

Biochemical evolution --- Book A82-25220

PSYCHOLINGUISTICS

How an unfamiliar thing should be called [AD-A109179] N82-18868

PSYCHOLOGICAL EFFECTS

Psychophysiological characteristics of the fatigue state based on activation indicators A82-24529

Old and new directions in the engineering psychology of artificial horizons and their effects on the mental hygiene of the student pilot A82-24842

Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

Nonauditory effects of high intensity noise on ground crews at a naval air station [AD-A108996] N82-19834

PSYCHOLOGICAL FACTORS

Scaling of perceived optical distortion --- physical and psychological factors of visual stimuli A82-22968

Evaluation of the psychological compatibility of drivers in a rally team A82-24477

Establishing methods of investigating individual characteristics of making decisions in situations of conflict A82-24528

A mediation method for solving problems of 'quick-wittedness' A82-24530

New ideas on the psychological selection of aircraft pilots A82-24840

Contribution to the history of the theoretical evolution of the psychological selection of aircraft pilots in Italy A82-24841

Scales of subjective intensities and judgment processes A82-24904

The psychological selection of French astronauts for a Franco-Soviet scientific space mission A82-25498

PSYCHOLOGICAL TESTS

The relationship between the individual properties of a human operator and work efficiency and tolerance to the monotony of work A82-24531

Factor calculation of the test variables in use by the legal medicine institutes of the Italian Air Force A82-24847

Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

PSYCHOMOTOR PERFORMANCE

The effects of noise - A review --- on human performance of complex tasks A82-22921

Selection of Performance Evaluation Tests for Environmental Research --- human performance measures
A82-22930

Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task --- number sequence memory
A82-22932

Performance evaluation tests for environmental research /PETER/ Landolt C reading test
A82-22933

Convergence-divergence with extended practice - Three applications --- human psychomotor task correlation with external measures
A82-22938

Theories of vigilance - A modern perspective
A82-22964

Onset and offset of brain events as indices of mental chronometry
A82-24800

Characteristics of cerebral somato-sensory evoked potentials under various conditions for the formation of simple motor reactions
A82-24830

**PSYCHOPHYSICS**

Psychophysical studies of perception and memory --- Russian book
A82-24901

Problems of the psychic reflection of the properties of the objective world on the sensory-perception level
A82-24902

Mathematical models of detection and discrimination --- in psychophysics
A82-24903

Scales of subjective intensities and judgment processes
A82-24904

Dynamic approach to the analysis of the signal detection process --- in psychophysics
A82-24905

Selective visual adaptation and the feature model
A82-24906

Objective sensometrics on the basis of the alpha-rhythm block reaction
A82-24907

Experience with the application of the method of evoked potentials in psychophysical studies
A82-24908

Analysis of operator speed by means of neurophysiological methods
A82-24909

**PSYCHOPHYSIOLOGY**

Bivariate response distributions in visual detection and discrimination
A82-22951

Model of visual detection and discrimination
A82-22952

Biological rhythm aspects of adaptation mechanisms
A82-23277

The role of sleep in the adaptation system and in the prognosis of psychological readiness of athletes in competition
A82-23279

Criteria for a healthy way of life and prerequisites for establishing it
A82-24521

A device for laboratory investigations of technical-diagnostic activity
A82-24527

Psychophysiological characteristics of the fatigue state based on activation indicators
A82-24529

A complex of instruments for psychophysiological studies
A82-24546

The effects of a flashing light on the spectral composition of brain biopotentials and the biomechanical effectiveness of balancing
A82-24837

**PSYCHOTHERAPY**

Biological methods for predicting the effectiveness of psychopharmacotherapy applied to patients with schizophrenia /Review/
A82-23297

**PSYCHOTROPIC DRUGS**

Changes in the temporal parameters of visual perception under the influence of psychostimulants
A82-23253

Biological methods for predicting the effectiveness of psychopharmacotherapy applied to patients with schizophrenia /Review/
A82-23297

**PUBLIC HEALTH**

Progress in the study of occupational diseases at the F. F. Erisman Hygiene Research Institute in Moscow
A82-24505

Characteristics of the functional state of health
A82-24520

Criteria for a healthy way of life and prerequisites for establishing it
A82-24521

Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature [PB82-110123]
N82-19835

**PULMONARY CIRCULATION**

Regulation of Pa/CO2/ and ventilation in humans inspiring low levels of CO2
A82-24912

Mechanical cardiopulmonary interdependence
A82-24915

Bradykinin-induced increase in pulmonary vascular permeability in hypoxic sheep
A82-24918

**PULMONARY FUNCTIONS**

Respiratory regulation --- Russian Book
A82-22400

Features of biorhythms for patients with chronic nonspecific pulmonary diseases during adaptation to the climato-geographic conditions of the Crimea
A82-24535

Pulmonary carbonic anhydrase in the human, monkey, and rat
A82-24917

Ventilatory responses at rest and during exercise in marathon runners
A82-24919

**PULSED RADIATION**

Individual differences in pulse brightness perception
A82-24032

**PURSUIT TRACKING**

The effect of prolonged practice of pursuit eye movement
A82-24030

**PYROTECHNICS**

Evolution of technological species --- development of tool use
A82-22994

R

**RADAR BEAMS**

Hematological and chromosomal analysis of a sample population working at radar installations
A82-24843

**RADAR EQUIPMENT**

Microwave and radio-frequency exposure limits
A82-22435

**RADAR NAVIG[illegible]S**

Flying s[illegible]l maintenance --- for combat tasks of fighter pilot and bomber crews
A82-22915

**RADAR TARGETS**

Required performance levels for autocueing devices --- target acquisition in synthetic aperture radar
A82-22953

**RADIATION DAMAGE**

Photodamage to the rhodopsin molecule - SH-group oxidation
A82-23275

Prediction of shifts in the radiation resistance of animals under the influence of various factors
A82-23288

**RADIATION DOSAGE**

Microwave and radio-frequency exposure limits
A82-22435

Hematological and chromosomal analysis of a sample population working at radar installations
A82-24843

Cosmic ray measurements on board the Concorde /results after four years/
A82-25500

Radiation environment mapping
N82-18268

**RADIATION EFFECTS**
Advanced biostack experiment
N82-18269
**RADIATION HAZARDS**
Microwave and radio-frequency exposure limits
A82-22435
Radiation environment mapping
N82-18268
Advanced biostack experiment
N82-18269
**RADIATION MEASUREMENT**
Cosmic ray measurements on board the Concorde /results after four years/
A82-25500
Radiation environment mapping
N82-18268
**RADIATION PROTECTION**
The effectiveness of using various radioprotective agents for protecting the genital cells of male mice from the genetic effects of radiation. I - Investigation of the yield of dominant lethal mutations in postspermatogonial cells
A82-23289
Objectives and structure of a radiation safety service in medical institutions
A82-23298
**RADIATION SHIELDING**
The effects of immobilization of mice of various radiation sensitivities and the shielding of portions of their bone marrow on survival rate and the formation of splenic colonies following irradiation
A82-23265
**RADIATION SICKNESS**
Effects of vitamin P on the enzyme spectrum of the blood serum of irradiated animals
A82-24560
**RADIATION TOLERANCE**
The effects of immobilization of mice of various radiation sensitivities and the shielding of portions of their bone marrow on survival rate and the formation of splenic colonies following irradiation
A82-23265
Prediction of shifts in the radiation resistance of animals under the influence of various factors
A82-23288
**RADIOBIOLOGY**
Photodamage to the rhodopsin molecule - SH-group oxidation
A82-23275
The effectiveness of using various radioprotective agents for protecting the genital cells of male mice from the genetic effects of radiation. I - Investigation of the yield of dominant lethal mutations in postspermatogonial cells
A82-23289
Hematological and chromosomal analysis of a sample population working at radar installations
A82-24843
**RANDOM NOISE**
Finding a needle in a haystack when you've never seen a needle - A human factors analysis of SETI
A82-22950
**REACTION KINETICS**
Organic chemical evolution
A82-22978
Role of interfacial water and water in thin films in the origin of life
A82-22980
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810
**REACTION TIME**
Recognition of VDU presented colors by color defective observers --- Visual Display Unit
A82-22966
Onset and offset of brain events as indices of mental chronometry
A82-24800
Analysis of operator speed by means of neurophysiological methods
A82-24909
**REACTOR SAFETY**
Human factors and safety in nuclear power plant operation
N82-19843
**REAL TIME OPERATION**
Findings from a study of tactical symbology for fighter aircraft displays
A82-22903
A system for the rapid operational evaluation of pilot performance
A82-23303
**REBREATHING**
Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies
N82-19830
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space
N82-19831
**RECONNAISSANCE AIRCRAFT**
An application of manned simulation in crew station conceptual development
A82-22943
**RECORDING INSTRUMENTS**
The role of multiple recording devices in the complex equipping of functional-diagnostic facilities
A82-24545
**REDUCED GRAVITY**
Biological effects of space travel /The W. Rupert Turnbull Lecture/
A82-23769
**REFLEXES**
Characteristics of the lifting reflex in albino rats following prolonged space flight /Effects of weightlessness and artificial gravity/
A82-23262
Vestibulo-spinal reflex mechanisms
N82-18257
Cardiovascular reflexes during upright position
N82-19821
Measurements of vestibular function
N82-19826
**RELIEF MAPS**
Map interpretation and geographic orientation during nap-of-the-earth flight
A82-22945
**REMOTE MANIPULATOR SYSTEM**
The assembly of large structures in space - An evaluation of hardware configurations and assembly techniques through neutral buoyancy simulation
A82-22918
**REMOTELY PILOTED VEHICLES**
Mini-remotely piloted vehicle precision tracking evaluation
A82-22909
Flight parameters and observer performance in RPV target acquisition
A82-22956
Effects of video bandwidth compression processing on operator performance in the Mini-RPV system
A82-22957
**RENAL FUNCTION**
The central hemodynamics of patients with sepsis and acute renal insufficiency
A82-23276
**RESEARCH**
Research predictions for underwater activities in the 1980's
[FOA-C-58010-H1] N82-18062
**RESEARCH AND DEVELOPMENT**
Work paradigms in human factors research
N82-19844
**RESEARCH FACILITIES**
Performance evaluation tests for environmental research /PETER/ Landolt C reading test
A82-22933
Item recognition as a Performance Evaluation Test for Environmental Research
A82-22934
A catalogue of Performance Evaluation Tests for Environmental Research
A82-22935
**RESEARCH MANAGEMENT**
Activities of the Committee on Human Factors: October 1, 1980 - September 30, 1981
[AD-A108606] N82-18874
**RESISTANCE**
Vitamins and natural immunity
A82-24490

RESPIRATION
Ventilatory responses at rest and during exercise in marathon runners
A82-24919
On-line, real-time determinations of breath-to-breath gas exchange
N82-19832
RESPIRATORY DISEASES
Morbidity involving a temporary loss of work capacity among drivers of automotive passenger vehicles
A82-24522
Features of biorhythms for patients with chronic nonspecific pulmonary diseases during adaptation to the climato-geographic conditions of the Crimea
A82-24535
RESPIRATORY PHYSIOLOGY
Respiratory regulation --- Russian Book
A82-22400
Effects of gravitational atelectases on the expiratory closure of respiratory tracts
A82-23260
RESPIRATORY SYSTEM
The biological significance of physiological hypoxemia
A82-24558
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811
RESPONSE TIME (COMPUTERS)
Item recognition as a Performance Evaluation Test for Environmental Research
A82-22934
RETENTION (PSYCHOLOGY)
Convergence-divergence with extended practice - Three applications --- human psychomotor task correlation with external measures
A82-22938
RETINAL ADAPTATION
The effects of age and ametropia on the dark focus of visual accommodation
A82-22929
Selective visual adaptation and the feature model
A82-24906
RETINAL IMAGES
Low-level laser light effects - Long-term effects --- on visual acuity of behaviorally trained monkeys
A82-22913
Changes in spectral acuity following laser irradiation
A82-22914
RHEOENCEPHALOGRAPHY
Additional criteria of cerebral hemodynamic disorders limiting physical loads in patients with hypertension
A82-24495
RHEOMETERS
Phase analysis of peripheral systemic circulation by a rheographic method
A82-24518
RHYTHM (BIOLOGY)
Phase characteristics of the response of the hypophysal-adrenal system under high-altitude conditions
A82-23166
A sino-auricular block with Samoilov-Wenkeback periods - Diagnosis with the aid of an automated analysis of the structure of heart rhythms and clinical assessment
A82-23270
The statistical structure of EEG rhythm interaction and individual features of brain autoregulation mechanisms
A82-23643
Circadian and seasonal rhythms in plasma androgen levels in the rhesus macaque monkey
A82-24525
Features of biorhythms for patients with chronic nonspecific pulmonary diseases during adaptation to the climato-geographic conditions of the Crimea
A82-24535
Chronobiological aspects in the science of health resorts and physiotherapy
A82-24536
RIBONUCLEIC ACIDS
Transfer RNA and the origin of protein synthesis
A82-22991
RUNNING
Core temperature, heart rate and sweatsuits
A82-22942
Ventilatory responses at rest and during exercise in marathon runners
A82-24919
RUNWAYS
Flight simulator runway visual textural cues for landing
A82-22926

S

SAFETY
Review of health and safety aspects of video display terminals
[CBC-TN-712-E] N82-19816
SAFETY DEVICES
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834
SAFETY FACTORS
Study of chlorine dioxide and its metabolites in man
[PB82-109356] N82-18863
SAFETY MANAGEMENT
Objectives and structure of a radiation safety service in medical institutions
A82-23298
SAMPLING
Life sciences passive GN2 freezer thermal performance test
[NASA-CR-167546] N82-19809
SCALING
Scaling of perceived optical distortion --- physical and psychological factors of visual stimuli
A82-22968
SCHIZOPHRENIA
Biological methods for predicting the effectiveness of psychopharmacotherapy applied to patients with schizophrenia /Review/
A82-23297
SEATS
Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting
A82-22969
SELF STIMULATION
Technique for the self-stimulation of subcortical structures in immobilized rats based on biofeedback
A82-23290
SEMICIRCULAR CANALS
The relation between the spontaneous activity and the dynamic characteristics of the primary afferents of the frog lateral semicircular canal
A82-23645
SENSORIMOTOR PERFORMANCE
Perception and performance in the heat
A82-22940
Bivariate response distributions in visual detection and discrimination
A82-22951
Characteristics of cerebral somato-sensory evoked potentials under various conditions for the formation of simple motor reactions
A82-24830
The effects of a flashing light on the spectral composition of brain biopotentials and the biomechanical effectiveness of balancing
A82-24837
The role of proprioceptive afferentation in maintaining the equilibrium of unstable mechanical systems
A82-24838
Analysis of operator speed by means of neurophysiological methods
A82-24909
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18869
SENSORY DEPRIVATION
The response of the microstructure of the cerebral subcommisural organ to a change in light cycle
A82-23173

SENSORY DISCRIMINATION
  Mathematical models of detection and discrimination --- in psychophysics
    A82-24903
  Mass discrimination during weightlessness
    N82-18264
SENSORY FEEDBACK
  Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
  [WTHD-134]    N82-18869
SENSORY PERCEPTION
  Psychophysical studies of perception and memory --- Russian book
    A82-24901
  Problems of the psychic reflection of the properties of the objective world on the sensory-perception level
    A82-24902
  Dynamic approach to the analysis of the signal detection process --- in psychophysics
    A82-24905
  Objective sensometrics on the basis of the alpha-rhythm block reaction
    A82-24907
  Experience with the application of the method of evoked potentials in psychophysical studies
    A82-24908
SENSORY STIMULATION
  Scales of subjective intensities and judgment processes
    A82-24904
  Selective visual adaptation and the feature model
    A82-24906
  Experience with the application of the method of evoked potentials in psychophysical studies
    A82-24908
SEROTONIN
  The effects of serotonin on shivering thermogenesis
    A82-23646
SERUMS
  The fatty acid composition of blood serum from intact rats and rats adapted to hypoxia under the conditions of acute hypoxia
    A82-24523
  The isoenzyme spectrum of serum lactate dehydrogenase as a function of age in healthy individuals
    A82-24554
  Effects of vitamin P on the enzyme spectrum of the blood serum of irradiated animals
    A82-24560
SERVICE LIFE
  Life sciences passive GN2 freezer thermal performance test
  [NASA-CR-167546]    N82-19809
SEX FACTOR
  A strength and anthropometric comparison of young men and women --- examined for work station design
    A82-22907
SHELLFISHES
  Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans
    N82-19808
SHIVERING
  The effects of serotonin on shivering thermogenesis
    A82-23646
  Seasonal differences in the adaptive changes of the thermal effect of muscle contraction
    A82-23647
SIGNAL DETECTION
  Bivariate response distributions in visual detection and discrimination
    A82-22951
  Mathematical models of detection and discrimination --- in psychophysics
    A82-24903
  Dynamic approach to the analysis of the signal detection process --- in psychophysics
    A82-24905
SIGNAL PROCESSING
  Effects of video bandwidth compression processing on operator performance in the Mini-RPV system
    A82-22957
SITTING POSITION
  Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting
    A82-22969
  Cardiovascular responses to isometric exercise in sitting and lying position
    N82-19823
  Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
  [VTH-LR-319]    N82-19847
SKIN (ANATOMY)
  Innervation of skin glands of the hedgehog /Erinaceus europaeus/ and its histochemical changes induced by hibernation
    A82-25244
SKIN TEMPERATURE (BIOLOGY)
  Characteristics of skin function in sailors in the tropics
    A82-25189
SKYLAB PROGRAM
  Analysis of evaporative water loss in the Skylab astronauts
  [NASA-CR-167462]    N82-19814
SLEEP
  The role of sleep in the adaptation system and in the prognosis of psychological readiness of athletes in competition
    A82-23279
  The effect of the beta-adrenergic blocker propranolol and the tranquilizer seduxen on the structure of natural sleep in the cat
    A82-23644
  Free and conjugated catecholamines and metabolites in cat urine after hypoxia
    A82-24913
SMOKE
  Legibility of smoke-obscured emergency exit signs
    A82-22949
SOCIAL FACTORS
  The effects of social facilitation on vigilance performance
    A82-22963
  Effects of attitudes on the performance of supervisors
    A82-23310
  Criteria for a healthy way of life and prerequisites for establishing it
    A82-24521
SODIUM
  Changes in blood sodium and potassium concentrations during emotional stress induced by nociceptive stimuli in rats
    A82-24550
SODIUM CHLORIDES
  The role of aldosterone in the regulation of the water and salt balance in hot-shop workers of the metallurgical industry
    A82-23251
SOLAR HEATING
  Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating
    A82-24516
SOLAR SYSTEM
  The appearance of life in the universe
    A82-23981
SOUND INTENSITY
  Measurements of tinnitus in transmission and perceptive deafness
    A82-24845
SOYUZ SPACECRAFT
  The psychological selection of French astronauts for a Franco-Soviet scientific space mission
    A82-25498
SPACE ENVIRONMENT SIMULATION
  Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980)
  [NASA-TM-81324]    N82-18854
SPACE EXPLORATION
  Constraints on early life by earth's accretional and preaccretional development
    A82-22986
SPACE FLIGHT STRESS
  Characteristics of the lifting reflex in albino rats following prolonged space flight /Effects of weightlessness and artificial gravity/
    A82-23262
  Biological effects of space travel /The W. Rupert Turnbull Lecture/
    A82-23769

Man in weightlessness - Physiological problems, clinical aspects, prevention and protection
A82-24846
Investigation of the effects of space flight factors on rat bone marrow cell chromosomes
A82-25321
SPACE FLIGHT TRAINING
Training for space
A82-23069
SPACE MANUFACTURING
The assembly of large structures in space - An evaluation of hardware configurations and assembly techniques through neutral buoyancy simulation
A82-22918
SPACE PERCEPTION
Eyes and glass curtains - Visual accommodation, the Mandelbaum effect, and apparent size
A82-22967
The role of the vestibular analyzer in the spatial analysis of gymnastic exercises
A82-23283
SPACE SHUTTLE PAYLOADS
Training for space
A82-23069
SPACE SHUTTLES
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18070
SPACE TRANSPORTATION SYSTEM 2 FLIGHT
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18058
SPACEBORNE EXPERIMENTS
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space
N82-18255
Vestibular experiments
N82-18256
Vestibulo-spinal reflex mechanisms
N82-18257
The influence of space flight on erythrokinetics in man
N82-18258
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness
N82-18259
Effects of prolonged weightlessness on the humoral immune response of humans
N82-18260
Three-dimensional ballistocardiography in weightlessness
N82-18262
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system
N82-18266
Microorganisms and biomolecules in space hard environment
N82-18267
Advanced biostack experiment
N82-18269
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18070
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space
N82-19831
SPACECRAFT CONTAMINATION
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18070
SPACECRAFT CONTROL
Six degree of freedom manual controls study report
[NASA-CR-167532] N82-19837
SPACECRAFT ENVIRONMENTS
Radiation environment mapping
N82-18268
SPACECRAFT MODELS
Investigations of the visual identification of abstract spacecraft models
A82-23307
SPACECREWS
Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814
Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815
SPACELAB
Radiation environment mapping
N82-18268
SPACELAB PAYLOADS
Effect of weightlessness on lymphocyte proliferation
N82-18261
Three-dimensional ballistocardiography in weightlessness
N82-18262
Mass discrimination during weightlessness
N82-18264
Nutation of Helianthus Annuus in a microgravity environment
N82-18265
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system
N82-18266
Microorganisms and biomolecules in space hard environment
N82-18267
Advanced biostack experiment
N82-18269
SPECTRAL SENSITIVITY
Low-level laser light effects - Long-term effects --- on visual acuity of behaviorally trained monkeys
A82-22913
Changes in spectral acuity following laser irradiation
A82-22914
SPEECH
The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products
[NASA-CR-168611] N82-19838
SPEECH RECOGNITION
Voice entry for reducing pilot workload
A82-22916
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order
[AD-A108721] N82-18867
SPINAL CORD
The functional state of the segmental apparatus of the spinal cord in humans during local work after a short period of rest
A82-24501
Vestibulo-spinal reflex mechanisms
N82-18257
SPLEEN
The effects of immobilization of mice of various radiation sensitivities and the shielding of portions of their bone marrow on survival rate and the formation of splenic colonies following irradiation
A82-23265
STATISTICAL ANALYSIS
Statistical tools for determining fitness to fly
[AD-A108599] N82-18860
STATISTICAL CORRELATION
The use of correlation analysis for the detection of signs of changes in the physiological condition of workers exposed to vibration
A82-24509
STIMULANTS
Changes in the temporal parameters of visual perception under the influence of psychostimulants
A82-23253
STRATEGY
The dependence of the strategy by which a solution is sought on the type of intellection
A82-24533
STRESS (PHYSIOLOGY)
Mental performance impairment in heat stress
A82-22939
Morphological changes in the hematopoietic organs of rats under the influence of adrenalin
A82-23167
Variation in catecholamine excretion in adolescents under mountain conditions
A82-23174
Phase phenomena in the vestibular analyzer - Vestibular recruitment
A82-23256

Biological rhythm aspects of adaptation mechanisms A82-23277
The influence of physical stress on the dynamics of work capacity and electrical activity of skeletal muscles in the course of an entire day A82-23284
Reaction of the blood system to single and double exposure to a stress agent A82-23287
Criteria and the quantitative evaluation of human disturbance tolerance --- external electrical stimuli effects on athlete performance A82-24476
A basis for the optimal duration of work breaks in the presence of noise of various intensities during the course of a work shift A82-24510
An evaluation of the total stress involved in certain types of precision work A82-24514
Effect of regulated muscular load on the morphological and functional characteristics of adrenal glands in dogs with experimental hypocorticalism A82-24524
Changes in blood sodium and potassium concentrations during emotional stress induced by nociceptive stimuli in rats A82-24550
The typological systematization of adaptive responses - Example of the antiorthostatic effect A82-24835
Characteristics of skin function in sailors in the tropics A82-25189

STRESS (PSYCHOLOGY)
The effects of noise - A review --- on human performance of complex tasks A82-22921
Morphological changes in the hematopoietic organs of rats under the influence of adrenalin A82-23167
Genetic and individual differences in cardiovascular disturbances in rats during experimental emotional stress A82-23278
An evaluation of the total stress involved in certain types of precision work A82-24514
Establishing methods of investigating individual characteristics of making decisions in situations of conflict A82-24528
Psychophysiological characteristics of the fatigue state based on activation indicators A82-24529
Correlation of the stress protective and autonomotropic effects of mebicar A82-24559
Systemic mechanisms of emotional stress --- Russian book A82-25231
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

STRUCTURAL ENGINEERING
Vibration sensitivity of workers in the main occupations of shipbuilding A82-23299

SUBMERGING
Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980)
[NASA-TM-81324] N82-18854

SULFUR
Sulfur - Fountainhead of life in the universe A82-22979

SULFUR COMPOUNDS
Sulfur - Fountainhead of life in the universe A82-22979

SUPINE POSITION
Cardiovascular responses to isometric exercise in sitting and lying position N82-19823

SURFACE VEHICLES
Morbidity involving a temporary loss of work capacity among drivers of automotive passenger vehicles A82-24522

SURFACTANTS
The condition of pulmonary surfactant and the ultrastructure of the blood-air barrier in acute hypoxia A82-23259

SURGERY
Stereotactic biopsy of brain tumors based on computerized tomography A82-24561

SWEAT
Characteristics of skin function in sailors in the tropics A82-25189

SYMBOLS
Findings from a study of tactical symbology for fighter aircraft displays A82-22903
Legibility of smoke-obscured emergency exit signs A82-22949

SYMPATHETIC NERVOUS SYSTEM
Reactive changes in autonomic synapses upon frequency electrostimulation A82-23263

SYNAPSES
Reactive changes in autonomic synapses upon frequency electrostimulation A82-23263

SYNTAX
SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding
[AD-A109331] N82-19846

SYNTHESIS (CHEMISTRY)
Modeling of the synthesis of peptide-like compounds in the primeval lithosphere of the earth A82-23136
Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553] N82-18871

SYNTHETIC APERTURE RADAR
Required performance levels for autocueing devices --- target acquisition in synthetic aperture radar A82-22953

SYNTHETIC FOOD
Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553] N82-18871

SYSTEM EFFECTIVENESS
Task taxonomies and modeling for system performance prediction A82-22946

SYSTEMS ENGINEERING
Human Factors in System Development: Experiences and Trends --- conference proceedings
[FOA-A-56003-H9] N82-19839
Human factors and the real world --- limitations on the man machine systems design process N82-19840
Human factors in system development: Status and evaluation N82-19841

SYSTEMS SIMULATION
Computer simulations for fault diagnosis training - From simulation to live system performance A82-22911
Task taxonomies and modeling for system performance prediction A82-22946
Is image quality important --- predicting air-to-ground target acquisition performance with electro-optical system A82-22954

SYSTEMS STABILITY
The effect of the evolution of inherited characteristics on the stability of a predator-prey system - A mathematical model A82-24538
The stability of a very simple freshwater ecosystem model A82-24539

SYSTOLE
Modifications in systolic time intervals induced by the transition to weightlessness A82-25495

T

TABLES (DATA)
  Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971) [RAE-TR-81017] N82-18857
TACTILE DISCRIMINATION
  Effect of tactile vibration on annoyance to synthesized propfan noise [NASA-TM-83258] N82-18866
TARGET ACQUISITION
  Mini-remotely piloted vehicle precision tracking evaluation A82-22909
  Required performance levels for autocueing devices --- target acquisition in synthetic aperture radar A82-22953
  Is image quality important --- predicting air-to-ground target acquisition performance with electro-optical system A82-22954
  Enhancement processes in the visual detection of barely perceptible targets A82-22955
  Flight parameters and observer performance in RPV target acquisition A82-22956
TARGET RECOGNITION
  Detection and recognition - Concurrent processes in perception A82-25162
TASK COMPLEXITY
  Voice entry for reducing pilot workload A82-22916
  The effects of noise - A review --- on human performance of complex tasks A82-22921
  The measurement of aircrew task loading during operational flights A82-22922
  The structure of processing resources - Implications for task configuration and workload --- effects on human performance in man machine systems A82-22923
  On the training of the sharing skills - An attention viewpoint A82-22925
  The validity of task analytic information to human performance research in unusual environments A82-22931
  Performance Evaluation Tests for Environmental Research /PETER/ - Auditory digit span task --- number sequence memory A82-22932
  Convergence-divergence with extended practice - Three applications --- human psychomotor task correlation with external measures A82-22938
  Application of preference tree methodology to choice behavior in a AAA supervisory control task --- Anti-Aircraft Artillery A82-22944
  Task taxonomies and modeling for system performance prediction A82-22946
  Enhancing operator acceptance and noninterference in secondary task measures of workload A82-22972
  Steady state average evoked potentials as a measure of tracking difficulty A82-22973
TASKS
  The effects of social facilitation on vigilance performance A82-22963
TASTE
  Application of electrogustometry for the evaluation of adrenal functional conditions A82-24548
TAXONOMY
  Task taxonomies and modeling for system performance prediction A82-22946
TECHNOLOGICAL FORECASTING
  Research predictions for underwater activities in the 1980's [FOA-C-58010-H1] N82-18862
TECHNOLOGY ASSESSMENT
  Autonomous biotechnological means for the continuous monitoring and correction of physiological systems A82-24834
  Human Factors in System Development: Experiences and Trends --- conference proceedings [FOA-A-56003-H9] N82-19839
TECHNOLOGY UTILIZATION
  Evolution of technological species --- development of tool use A82-22994
  Human factors for the future: Trends and speculations N82-19845
TELEOPERATORS
  Effects of video bandwidth compression processing on operator performance in the Mini-RPV system A82-22957
TEMPERATURE EFFECTS
  Mental performance impairment in heat stress A82-22939
  Perception and performance in the heat A82-22940
  Effect of the Circutone seat on hemodynamic, subjective and thermal responses during prolonged sitting A82-22969
  The effects of cold on catecholamine fluorescence in several structures of the rat brain A82-23172
  Prediction of shifts in the radiation resistance of animals under the influence of various factors A82-23288
  A mechanism for the stimulation of the immune response under the influence of high ambient temperature A82-24557
TERMINOLOGY
  How an unfamiliar thing should be called [AD-A109179] N82-18868
TERRAIN ANALYSIS
  Map interpretation and geographic orientation during nap-of-the-earth flight A82-22945
  Development and inflight testing of a multi-media course for instructing navigation for night nap-of-the-earth flight A82-22961
TEXTURES
  Flight simulator runway visual textural cues for landing A82-22926
THERAPY
  Chronobiological aspects in the science of health resorts and physiotherapy A82-24536
  Combined rehabilitative and therapeutic measures in space medicine A82-24547
THERMAL COMFORT
  Mental performance impairment in heat stress A82-22939
  Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating A82-24516
THERMAL POLLUTION
  Some indices of the functional physiological state of inspectors at a thermal power plant A82-24515
THERMOREGULATION
  Application of a predictive core temperature model to heat stress experimentation A82-22941
  The effects of serotonin on shivering thermogenesis A82-23646
  The regulation of body temperature during physical work A82-24836
  Strain difference in thermoregulation of rats surviving extreme heat A82-24920
THIN FILMS
  Role of interfacial water and water in thin films in the origin of life A82-22980

THRESHOLDS (PERCEPTION)
  Dynamic approach to the analysis of the signal detection process --- in psychophysics
  A82-24905
THROMBOCYTES
  Lipid levels in the bone marrow megakaryocytes and thrombocytes of healthy people
  A82-24555
THROMBOSIS
  Limitations of echocardiographic techniques in evaluation of left atrial masses
  A82-25135
  Two dimensional echocardiographic detection of intraatrial masses
  A82-25136
TIME DEPENDENCE
  An investigation of the visual observations made by cosmonauts under experimental and actual conditions
  A82-23305
TIME LAG
  Modifications in systolic time intervals induced by the transition to weightlessness
  A82-25495
TIME MEASUREMENT
  Onset and offset of brain events as indices of mental chronometry
  A82-24800
TIME SHARING
  On the training of the sharing skills - An attention viewpoint
  A82-22925
TISSUES (BIOLOGY)
  Tissue hypoxia and its correction --- Russian book
  A82-24910
  Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle
  N82-19829
TOMOGRAPHY
  Stereotactic biopsy of brain tumors based on computerized tomography
  A82-24561
TOOLS
  Evolution of technological species --- development of tool use
  A82-22994
TOXIC HAZARDS
  Hydrogen cyanide health effects
  [PB82-116039] N82-18864
  Ammonia health effects
  [PB82-116047] N82-18865
  Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
  [PB82-117037] N82-19811
TOXICITY
  Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
  [PB82-117037] N82-19811
TOXICITY AND SAFETY HAZARD
  Carbon fibre reinforced epoxy prepregs and composites - Health risk aspects
  A82-24823
TRACKING (POSITION)
  Mini-remotely piloted vehicle precision tracking evaluation
  A82-22909
  The effects of left hand fatigue on right hand performance
  A82-22970
  Steady state average evoked potentials as a measure of tracking difficulty
  A82-22973
  Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order
  [AD-A108721] N82-18867
TRAINING EVALUATION
  Performance evaluation tests for environmental research /PETER/ Landolt C reading test
  A82-22933
  Task analytic approach to human performance battery development
  A82-22937
  Convergence-divergence with extended practice - Three applications --- human psychomotor task correlation with external measures
  A82-22938
  An integrated approach to pilot performance evaluation
  A82-22948
  Quantitative criteria for evaluating the candidates granted admission and the effectiveness of athletic training among students in institutes of physical culture
  A82-24403
TRAINING SIMULATORS
  Flying skill maintenance --- for combat tasks of fighter pilot and bomber crews
  A82-22915
TRANQUILIZERS
  The effect of the beta-adrenergic blocker propranolol and the tranquilizer seduxen on the structure of natural sleep in the cat
  A82-23644
  Correlation of the stress protective and autonomotropic effects of mebicar
  A82-24559
TREATMENT
  Tissue hypoxia and its correction --- Russian book
  A82-24910
TREES (MATHEMATICS)
  Application of preference tree methodology to choice behavior in a AAA supervisory control task --- Anti-Aircraft Artillery
  A82-22944
TRENDS
  Human Factors in System Development: Experiences and Trends --- conference proceedings
  [FOA-A-56003-H9] N82-19039
  Human factors for the future: Trends and speculations
  N82-19845
TROPICAL REGIONS
  Characteristics of skin function in sailors in the tropics
  A82-25109
TUBERCULOSIS
  Cardiac function in surgical tuberculosis patients under conditions of prolonged bed rest
  A82-24519
TUMORS
  Stereotactic biopsy of brain tumors based on computerized tomography
  A82-24561

U

ULCERS
  Use of botanical and vitamin preparations in the prevention of gastric ulcers induced in rats by immobilization, noise and vibration
  A82-23175
UNIVERSE
  Life in the universe; Proceedings of the Conference, Moffett Field, CA, June 19, 20, 1979
  A82-22976
  Sulfur - Fountainhead of life in the universe
  A82-22979
  The appearance of life in the universe
  A82-23981
UREAS
  Isotopic analysis of leucine and urea metabolism in exercising humans
  A82-24923
USER REQUIREMENTS
  Design criteria for decision aids - The users perspective
  A82-22912

V

VACUUM
  Microorganisms and biomolecules in space hard environment
  N82-18267
VACUUM EFFECTS
  Mechanism of the effects of vacuum on microorganisms
  A82-24551

**VASCULAR SYSTEM**
The differential diagnosis of peripheral vasomotor impairments of vibrational and nonvibrational origin
A82-24507

**VASODILATION**
Changes in regional and central hemodynamics during the treatment of hypertensive patients with obsidan, apressin and their combination
A82-23271

**VEGETATION GROWTH**
Nutation of Helianthus Annuus in a microgravity environment
N82-18265

**VERTICAL MOTION**
Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847

**VESTIBULAR NYSTAGMUS**
The latency of circular vection during different accelerations of the optokinetic stimulus
A82-24031

**VESTIBULAR TESTS**
Characteristics of the lifting reflex in albino rats following prolonged space flight /Effects of weightlessness and artificial gravity/
A82-23262

The latency of circular vection during different accelerations of the optokinetic stimulus
A82-24031

Effects of rectilinear acceleration, optokinetic and caloric stimuli in space
N82-18255

Vestibular experiments
N82-18256

Vestibulo-spinal reflex mechanisms
N82-18257

**VESTIBULES**
Vestibulovascular responses in inner ear dysfunction
A82-23255

Phase phenomena in the vestibular analyzer - Vestibular recruitment
A82-23256

Changes in the posture of healthy rats after the intracranial introduction of brain extracts from animals with experimental vestibulopathy
A82-23257

The role of the vestibular analyzer in the spatial analysis of gymnastic exercises
A82-23283

Measurements of vestibular function
N82-19826

**VIBRATION EFFECTS**
Use of botanical and vitamin preparations in the prevention of gastric ulcers induced in rats by immobilization, noise and vibration
A82-23175

Vibration sensitivity of workers in the main occupations of shipbuilding
A82-23299

Comparison of some technical methods for the evaluation of whole-body vibration
A82-23400

Certain neurohormonal and blood-coagulation changes in the case of early symptoms of vibration-related pathology in miners
A82-24504

The differential diagnosis of peripheral vasomotor impairments of vibrational and nonvibrational origin
A82-24507

The use of correlation analysis for the detection of signs of changes in the physiological condition of workers exposed to vibration
A82-24509

**VIBRATION MEASUREMENT**
Comparison of some technical methods for the evaluation of whole-body vibration
A82-23400

**VIBRATION PERCEPTION**
Influence of interactions of hearing and vibratory sensations on the masking effect
A82-23254

Comparison of some technical methods for the evaluation of whole-body vibration
A82-23400

The relation between the spontaneous activity and the dynamic characteristics of the primary afferents of the frog lateral semicircular canal
A82-23645

Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866

Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847

**VIDEO COMMUNICATION**
Effects of video bandwidth compression processing on operator performance in the Mini-RPV system
A82-22957

**VIDEO EQUIPMENT**
Review of health and safety aspects of video display terminals
[CRC-TN-712-E] N82-19816

**VIRUSES**
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18855

**VISIBILITY**
Legibility of smoke-obscured emergency exit signs
A82-22949

**VISION**
Neuromorphological evidence of individual differences in human vision
A82-24500

**VISUAL ACCOMMODATION**
The effects of age and ametropia on the dark focus of visual accommodation
A82-22929

Eyes and glass curtains - Visual accommodation, the Mandelbaum effect, and apparent size
A82-22967

**VISUAL ACUITY**
Low-level laser light effects - Long-term effects --- on visual acuity of behaviorally trained monkeys
A82-22913

Changes in spectral acuity following laser irradiation
A82-22914

Performance evaluation tests for environmental research /PETER/ Landolt C reading test
A82-22933

Item recognition as a Performance Evaluation Test for Environmental Research
A82-22934

**VISUAL DISCRIMINATION**
Comparison of memory tests for environmental research
A82-22936

Bivariate response distributions in visual detection and discrimination
A82-22951

Model of visual detection and discrimination
A82-22952

Scaling of perceived optical distortion --- physical and psychological factors of visual stimuli
A82-22960

The response of the microstructure of the cerebral subcommissural organ to a change in light cycle
A82-23173

**VISUAL FLIGHT**
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance
[ESA-TT-691] N82-18861

The effect of visual information on the manual approach and landing
[NLR-TR-80055-U] N82-19836

**VISUAL OBSERVATION**
An investigation of the visual observations made by cosmonauts under experimental and actual conditions
A82-23305

**VISUAL PERCEPTION**
What do pilots see in displays
A82-22906

The effect of inter-stimulus intervals on the perception of short flashes of red and green light
A82-22927

Enhancement processes in the visual detection of barely perceptible targets
A82-22955

Changes in the temporal parameters of visual perception under the influence of psychostimulants
A82-23253

Investigations of the visual identification of abstract spacecraft models
A82-23307

The effect of prolonged practice of pursuit eye movement
A82-24030

Individual differences in pulse brightness perception
A82-24032

Selective visual adaptation and the feature model
A82-24906

The effect of visual information on the manual approach and landing
[NLR-TR-80055-U] N82-19836

VISUAL SIGNALS
Flight simulator runway visual textural cues for landing
A82-22926

VISUAL STIMULI
Performance evaluation tests for environmental research /PETER/ Landolt C reading test
A82-22933

Model of visual detection and discrimination
A82-22952

Scaling of perceived optical distortion --- physical and psychological factors of visual stimuli
A82-22968

The latency of circular vection during different accelerations of the optokinetic stimulus
A82-24031

The effects of a flashing light on the spectral composition of brain biopotentials and the biomechanical effectiveness of balancing
A82-24837

Objective sensometrics on the basis of the alpha-rhythm block reaction
A82-24907

VISUAL TASKS
Instrument scan - Is it an indicator of the pilot's workload
A82-22924

The event-related brain potential as an index of attention allocation in complex displays
A82-22928

Systems analysis of the EEG during signal discrimination tasks --- alpha and beta rhythms
A82-24831

VITAMINS
Use of botanical and vitamin preparations in the prevention of gastric ulcers induced in rats by immobilization, noise and vibration
A82-23175

Vitamins and natural immunity
A82-24490

Effects of vitamin P on the enzyme spectrum of the blood serum of irradiated animals
A82-24560

VOICE COMMUNICATION
Voice entry for reducing pilot workload
A82-22916

The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products
[NASA-CR-168611] N82-19838

VOLATILITY
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18859

W

WATER
Role of interfacial water and water in thin films in the origin of life
A82-22980

WATER BALANCE
The role of aldosterone in the regulation of the water and salt balance in hot-shop workers of the metallurgical industry
A82-23251

Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle
N82-19829

WATER LOSS
Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

WATER POLLUTION
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858

WEAPON SYSTEMS
Evaluating operator performance on automated tactical systems
A82-22908

WEIGHT (MASS)
Mass discrimination during weightlessness
N82-18264

WEIGHTLESSNESS
Characteristics of the lifting reflex in albino rats following prolonged space flight /Effects of weightlessness and artificial gravity/
A82-23262

Man in weightlessness - Physiological problems, clinical aspects, prevention and protection
A82-24846

Modifications in systolic time intervals induced by the transition to weightlessness
A82-25495

Effects of rectilinear acceleration, optokinetic and caloric stimuli in space
N82-18255

Vestibular experiments
N82-18256

The influence of space flight on erythrokinetics in man
N82-18258

Measurement of central venous pressure and determination of hormones in blood serum during weightlessness
N82-18259

Effects of prolonged weightlessness on the humoral immune response of humans
N82-18260

Effect of weightlessness on lymphocyte proliferation
N82-18261

Three-dimensional ballistocardiography in weightlessness
N82-18262

Mass discrimination during weightlessness
N82-18264

Nutation of Helianthus Annuus in a microgravity environment
N82-18265

Human cardiovascular adaptation to zero gravity --- symposium proceedings, Copenhagen, 20-21 Apr. 1981
[ESA-SP-1033] N82-19017

Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818

Adaptation to zero gravity as simulated by head-down tilt
N82-19819

Clinical physiology of the renin-angiotensin-aldosterone system
N82-19820

Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity
N82-19822

Cerebral hemodynamics at zero gravity
N82-19827

WEIGHTLESSNESS SIMULATION
Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980)
[NASA-TM-81324] N82-18854

Adaptation to zero gravity as simulated by head-down tilt
N82-19819

WETLANDS
Gravity, lignification, and land plant evolution
A82-22997

WINDSHIELDS
Canopy induced displacement evaluation --- visual displacement of targets for fighter aircraft
A82-22958

Eyes and glass curtains - Visual accommodation, the Mandelbaum effect, and apparent size A82-22967

**WORDS (LANGUAGE)**
How an unfamiliar thing should be called [AD-A109179] N82-18868

**WORK**
Work paradigms in human factors research N82-19844

**WORK CAPACITY**
The influence of physical stress on the dynamics of work capacity and electrical activity of skeletal muscles in the course of an entire day A82-23284
Criteria and the quantitative evaluation of human disturbance tolerance --- external electrical stimuli effects on athlete performance A82-24478
The condition of several metabolic processes in operators A82-24491
Cumulative fatigue over long periods caused by localized muscular movements A82-24502
Physiological and hygienic evaluation of the work of female tower crane operators A82-24512
The change in certain parameters of operator activity under the influence of alcohol A82-24513
An evaluation of the total stress involved in certain types of precision work A82-24514
Characteristics of the functional state of health A82-24520
Morbidity involving a temporary loss of work capacity among drivers of automotive passenger vehicles A82-24522
Psychophysiological characteristics of the fatigue state based on activation indicators A82-24529

**WORK-REST CYCLE**
Correlation of behavioral rest-activity phases and the characteristics of the spatial organization of cortical potentials in the case of experimental neurosis A82-23291
The work capacity of seamen under an altered schedule of work and rest A82-23302
The functional state of the segmental apparatus of the spinal cord in humans during local work after a short period of rest A82-24501
Certain characteristics of the physiological basis of work-rest regimes for rolling mill operators A82-24506
A basis for the optimal duration of work breaks in the presence of noise of various intensities during the course of a work shift A82-24510
Mission operation report: Space Shuttle program. STS-2 postflight medical operations [NASA-TM-84135] N82-18858

**WORKLOADS (PSYCHOPHYSIOLOGY)**
Computer assisted displays enabling internalization and reduction of operator workload in higher order systems, or, pushing the barrier of human control beyond second order systems A82-22910
Voice entry for reducing pilot workload A82-22916
The measurement of aircrew task loading during operational flights A82-22922
The structure of processing resources - Implications for task configuration and workload --- effects on human performance in man machine systems A82-22923
Instrument scan - Is it an indicator of the pilot's workload A82-22924
On the training of the sharing skills - An attention viewpoint A82-22925
The event-related brain potential as an index of attention allocation in complex displays A82-22928
Some current issues in workload assessment A82-22971
Enhancing operator acceptance and noninterference in secondary task measures of workload A82-22972
Training athletes to make quick decisions A82-24487
Working conditions and health of female workers in the sawmill sections of the wood-working industry A82-24508
The relationship between the individual properties of a human operator and work efficiency and tolerance to the monotony of work A82-24531
The dependence of the productivity of repetitious activity and tolerance to monotonous labor on the individual characteristics of the human operator A82-24833
Modeling human attention allocation strategies with competing criteria [AD-A108509] N82-18875

## Y

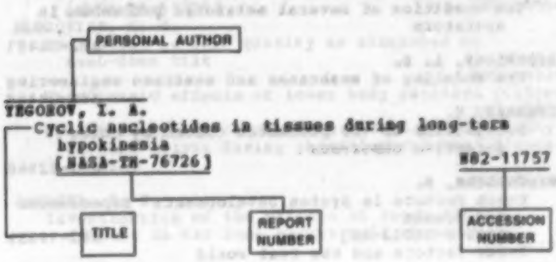
**YEAST**
Mechanism of the effects of vacuum on microorganisms A82-24551

## Z

**ZEOLITES**
A new concept in life support systems - The NGL molecular sieve oxygen generator A82-23370

# PERSONAL AUTHOR INDEX

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstact in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABDIKALIEV, N. A.**
Pathogenesis and prevention of the hypoxic contraction of the heart
A82-24552

**ABDYLDAEV, A. A.**
Morphofunctional changes in the rabbit myocardium during chronic solar thermal overheating
A82-24516

**ABRAITIS, R. I.**
Changes with age in the cholin- and adrenergic innervation of the human heart
A82-23260

**ADALIS, D.**
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811

**AFANASEV, IU. A.**
Vibration sensitivity of workers in the main occupations of shipbuilding
A82-23299

**AFONIN, N. I.**
Study of the kinetics of oxygen saturation of fluorocarbon emulsions

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago

**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**
Boston Public Library
**MICHIGAN**
Detroit Public Library
**MINNESOTA**
Minneapolis Public Library and Information Center
**NEW JERSEY**
Trenton Public Library

**NEW YORK**
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
**OHIO**
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 234)

**A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in June 1982 in**

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Branch 1982
**National Aeronautics and Space Administration**
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 356 reports, articles and other documents announced during June 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction)

**Avail:** DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

**Avail:** Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

**Avail:** USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

**Avail:** HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

**Avail:** BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

**Avail:** Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

**Avail:** Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

**Avail:** U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

**Other availabilities:** If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

A82-11697 † **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti).** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

## A Continuing Bibliography (Suppl. 234)

JULY 1982

## IAA ENTRIES

**A82-25619** **Final-position of a single degree-of-freedom tendon arm.** P. R. H. Riemenschneider, T. L. Johnson (Bolt Beranek and Newman, Inc., Cambridge, MA), and K. H. Chen (MIT, Cambridge, MA). In: Conference on Decision and Control, 19th, and Symposium on Adaptive Processes, Albuquerque, NM, December 10-12, 1980, Proceedings. Volume 2. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 1070-1075. 5 refs. Research supported by the Whitaker Health Sciences Fund.

A decentralized controller for a mechanical analog of human biceps/triceps control of forearm movement has been designed and tested. The analysis, design, and implementation of this system should be of interest not only as a control application, but also because it brings out some important features which are generic to the positioning of tendon arms of all types. Most particularly, a crude but effective form of load compensation is shown to be possible without (the equivalent of) proprioceptive feedback; this supports recent physiological findings which suggest that large arm movements in primates may be predominantly open-loop processes of final position control. (Author)

**A82-25632** * **Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller.** M. Handlykken and T. Turner (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: Conference on Decision and Control, 19th, and Symposium on Adaptive Processes, Albuquerque, NM, December 10-12, 1980, Proceedings. Volume 2. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 1197-1205. 13 refs. Contract No. NAS7-100.

A six degree-of-freedom joystick with feedback motors, called the Force-Reflecting Hand Controller (FRHC) is used as control input for the human operator in a teleoperator system. The geometric and dynamic properties of the FRHC are entirely different from those of the manipulator being controlled. The paper discusses the analysis and synthesis of the control loop between the FRHC and the robot arm and examines the necessary position and force transformations. The controller is implemented through a dedicated minicomputer. (Author)

**A82-25647** **Corrective saccades - Effect of shifting the saccade goal.** H. Deubel, W. Wolf, and G. Hauske (München, Technische Universität, Munich, West Germany). *Vision Research,* vol. 22, no. 3, 1982, p. 353-364. 32 refs. Deutsche Forschungsgemeinschaft Contract No. SFB-50.

A double step paradigm was used to investigate the saccade control, in particular the role of retinal feedback on correction saccades. The first target step eliciting the primary saccade had an amplitude of 10-15 deg and was followed by a second target step of 3 deg which occurred 0-300 msec after the onset of the primary saccade. The characteristics of the saccadic reactions were analyzed as a function of the time between the end of the primary saccade and the second target step. The data show that correction saccades can be modified when the second target step occurs earlier than 80 msec after the end of the primary saccade. Secondary saccades then are corrective, and their parameters show no differentiation between endogenous and exogenous refixation errors. In further experiments, additional blanking periods were inserted separating the visual system from reafferent information. Under this condition, the system is silent and starts the programming of the correction saccade only when the target is illuminated again. The data demonstrate that retinal feedback is a fundamental part in refixation. (Author)

**A82-25648** **Perceived rate of movement depends on contrast.** P. Thompson (Cambridge University, Cambridge, England). *Vision Research,* vol. 22, no. 3, 1982, p. 377-380. 9 refs. Science Research Council Grant No. GR/A/73817.

The results of experiments which examined the appearance of moving gratings above threshold are reported. Moving sine wave gratings were generated on contiguous oscilloscopes and subjects varied the rate of the right hand screen to match the rate of movement of the left. Test grating contrasts were varied in 0.15 log time steps and the base pattern was displayed for only 2.5 sec/trial, followed by a 17.5 sec lapse. A changeover from under- to overestimation was observed at 8 Hz, and not at a constant velocity. A second experiment with varying rates of movement, contrast levels, and a left-eye display for comparison with a previous standard of movement was used for the contrast effects determination. The results closely matched the first experiment, and a two-channel model is proposed which features a slow channel sensitive to slow-moving patterns, and a fast channel for fast moving patterns, with different contrast sensitivities in each channel. M.S.K.

**A82-25649** **Intraretinal recordings of slow electrical responses to steady illumination in monkey - Isolation of receptor responses and the origin of the light peak.** J. M. Valeton and D. van Norren (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek, Soesterberg, Netherlands). *Vision Research,* no. 3, 1982, p. 393-399. 32 refs. Research supported by the Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek.

**A82-25676** † **Basic principles of hypoxia control during shock (Osnovnye printsipy bor'by s gipoksiei pri shoke).** V. K. Kulagin and I. G. Boldina. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 10-15. 47 refs. In Russian.

Principles governing the treatment of hypoxia encountered during episodes of shock are discussed. General mechanisms of the development of hypoxia during various types of shock are reviewed, including an elevation in sympathetic nervous system tonus and increase in catecholamine production, centralization of blood flow, blood loss, pulmonary disturbances leading to arterial hypoxemia, cellular damage limiting oxygen utilization and toxemia. The necessity of a combined approach to shock, treating pain, respiration, cardiovascular activity, tissue respiration, and metabolism, is emphasized, and it is noted that any treatment for shock will eventually affect shock-induced hypoxia. Particular attention is then given to various classes of antihypoxants used in the treatment of shock on the cellular and subcellular levels, including glucose, phosphorylated hydrocarbons, ATP and its dephosphorylation products, amino acids, Krebs cycle intermediates, electron acceptors and their constituents, vitamin B1, succinic acid, and thiourea derivatives. A.L.W.

**A82-25677** † **Expansion of the experimental possibilities of evaluating cardiac output by means of integral rheography using a**

**high-pass filter (Rasshirenie v eksperimente vozmozhnostei otsenki serdechnogo vybrosa metodom integral'noi reografii putem primeneniia fil'tra vysokikh chastot).** M. A. Vizel' (Azerbaidzhanskii Nauchno-Issledovatel'skii Institut Gigieny Truda i Professional'nykh Zabolevanii, Baku, Azerbaidzhan SSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* May-June 1981, p. 64, 65. 6 refs. In Russian.

**A82-25678 †** **Dynamics of brain cell oxygen tension and electrical activity in the norm and in hypoxia (Dinamika napriazheniia kisloroda i elektricheskoi aktivnosti kletok mozga v norme i pri gipoksii).** M. T. Shaov (Kabardino-Balkarskii Gosudarstvennyi Universitet, Nalchik, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 22-26. 12 refs. In Russian.

Changes in oxygen levels and electrical activity in brain cells under normal conditions, conditions of acute hypoxia and following the development of hypoxia adaptation are investigated in a study of cellular adaptation mechanisms. Microelectrodes placed against the membranes of single cells in the rat motor cortex were used to measure both oxygen tension and electrical impulses in rats kept under laboratory conditions and periodically exposed to a simulated altitude of 7 km. Oxygen tensions at the cellular membrane are observed to be significantly greater in hypoxia-adapted than control animals under normal conditions and to remain higher, although by a lesser margin, at simulated altitudes as high as 12 km, although absolute levels in both groups decreased with increasing hypoxia. The formation of the oxygen gradient in adapted animals is related to a reduction in cellular oxygen consumption, which is reflected in differential reductions in electrical activity. A.L.W.

**A82-25679 †** **Elevation of hypoxia tolerance under the influence of prolonged fasting (Povyshenie ustoichivosti organizma k gipoksii pod vliianiem dlitel'nogo golodaniia).** Iu. V. Zinov'ev, E. Iu. Podgornaia, and A. G. Kardovskii (Kirovskii Nauchno-Issledovatel'skii Institut Perelivaniia Krovi, Kirov, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 63-65. 12 refs. In Russian.

The use of fasting as a measure to increase hypoxia tolerance is investigated in rabbits undergoing altitude hypoxia, hemorrhagic hypotension, and circulatory hypoxia. Fasting for a period of two weeks is observed to increase the survival rate for exposure to 10,000 m simulated altitude for 1 hour from 10% for control animals and 20% for animals treated with gutamine, to 100%. Observations of hyperglycemia and a less intense antihypoxic effect in circulatory hypoxia due to hepatic-duodenal ligament compression suggest enhanced gluconeogenesis in the liver and kidneys to be the predominant mechanism accounting for increased hypoxia tolerance in fasted animals. A.L.W.

**A82-25680 †** **The energy supply of serotonin inactivation processes in the lungs (Energoobespechenie protsessov inaktivatsii serotonina v legkikh).** P. V. Dubilei (Volgogradskii Institut Fizkul'tury, Volgograd, USSR) and V. V. Teniukov (Chuvashskii Gosudarstvennyi Universitet, Cheboksary, USSR). *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* July-Aug. 1981, p. 69-73. 11 refs. In Russian.

The nature of the energy supply to the energy-dependent tissue absorption process in the pulmonary inactivation of serotonin (5-HT) is investigated in a series of oxygen deprivation experiments, serving to suppress aerobic metabolism. Measurements of arterial, venous and pulmonary serotonin levels were made in dogs, cats and isolated perfused rat lungs under conditions of occlusional, hypoxic and anoxic hypoxia. Acute hypoxia is observed to lead to an impairment in pulmonary 5-HT inactivation as revealed by the increase in total and free 5-HT levels in arterial and venous blood. The transition from hypoxia to breathing of normal air reverses these changes, and increases the veno-arterial 5-HT gradient to a level twice the initial. Data indicate the importance of aerobic metabolism in the energy supply for 5-HT absorption, a hypothesis supported by observations of increases in glycolytic enzyme activities and lactate production during hypoxia. A.L.W.

**A82-25681 †** **The effectiveness of various radio-protective agents in protecting the germ cells of male mice against the genetic effects of radiation. II - The incidence of reciprocal translocations in irradiated spermatogonia (Effektivnost' primeneniia razlichnykh radioprotektorov dlia zashchity polovykh kletok samtsov myshei ot geneticheskogo deistviia radiatsii. The potentiation of the radiation-protective effects of cystamine and aminopropylaminoethylthiophosphoric acid (APAETP) by their simultaneous use with certain thiourea derivatives is investigated. Each sulfur-containing radioprotective agent was administered in combination with the hypertensives ethyron or methyron or the antioxidant gutimine to mice 20 min before exposure to a gamma-ray dose of 7.5 g-r. Evaluation of 30-day survival rates and spleen and bone marrow cell populations reveals the thiourea derivatives to be effective in increasing the radioprotective actions of cystamine and APAETP, particularly when ethyron and gutimine are used. The two-component mixtures are also found to reduce the toxicity of the radioprotectors, thus widening the radioprotective zone and increasing the safety index. A.L.W.

The system used in classifying hypoxic conditions is described. A description is also given of the two forms of oxygen therapy, which is one of the most common means of treating hypoxia. In the first, the partial pressure of oxygen is increased without raising the overall pressure; this is done by increasing the concentration of oxygen. In the second form of oxygen therapy, oxygen at a higher pressure is introduced in compression chambers. In many cases, however, oxygen therapy is ineffective because of an intolerance to oxygen. There are two approaches in treating any form of oxygen hunger. One is replacement therapy. The other involves vaccinations (in the case of infectious diseases) and the gradual acclimatization to and use of mountain climates (for many illnesses related to chronic hypoxic conditions). The overall therapeutic effect of mountain climates is discussed. C.R.

Tsibulevskii (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Voprosy Psikhologii,* May-June 1981, p. 127-131, 191. In Russian.

Attention is given to the theory of Schmidt et al. (1979) concerning the accuracy of rapid motor acts relating to motor-output variability. A description of the theory is given and some critical comments are made. Schmidt's theory is reduced to the proposition that when path and time are given the rapid motor acts are divided into two classes: targeted and nontargeted. It is argued that the nontargeted motor acts accord with the theory of open programmed control, while targeted acts cannot be explained by this theory. B.J.

Svetlov (I Moskovskii Meditsinskii Institut, Moscow, USSR). *Akademiia Meditsinskikh Nauk SSSR, Vestnik,* no. 1, 1981, p. 76-82. 40 refs. In Russian.

Clinical-electrophysiological studies involving the continuous synchronous recording of EEG, EKG, pneumograms, and galvanic skin response have been performed in order to investigate the stimulation mechanisms of respiratory and cardiac activity by sombrevin. It is found that the onset of sombrevin-induced autonomic crisis is preceded by the development of narcosis and is associated with increases in brain electric activity and with hypersynchronization of EEG rhythms. This onset may therefore be considered as a manifestation of an excitation phase. Phentanyl prevents the autonomic crisis, the antagonism of the drugs presumably effected at the hypothalamic level. B.J.

The dependence of worker morbidity on the duration, time distribution and intensity of physical exercise performed by them in the course of a week is investigated. Comparison of responses to a physical exercise questionnaire with the morbidity histories of automotive workers reveals the optimal level of exercise with respect to illness and injury incidence to be between 2 and 6 hours/week in the various age-sex groups. For persons under 30 years of age, the most beneficial regimen consists of exercise more than six times a week, while for those 30 and over exercise is most beneficial when taken two to three times a week. The least morbidity in all classes is observed in workers expending 4000-5000 kcal a week in physical exercise. Results are in accordance with previous studies, supporting the existence of definite motor activity norms for maintaining productivity and health. A.L.W.

A study is made of the activity of workers in the shipbuilding industry who use heavy vibrating tools. The amount of time during a shift that each worker spends actually operating the tool is determined. Although a sufficient number of the intervals between operation are at least 2 min, the distribution of these pauses is found to be uneven. Measures are proposed to correct this imbalance. C.R.

Experimental and clinical data is presented which supports a revision of standards in the Soviet Union for maximum local vibration exposure. Studies on bulls have shown the sensitivity thresholds to vibration at 125 and 500 Hz to differ by 10-15 dB, necessitating an upward revision of limiting vibration levels at frequencies of 16 Hz or less with respect to that at 125 Hz. Examinations of workers using high- and low-frequency hand-held machines have further allowed the determination of absolute vibration levels at various frequencies at which no significant physiological impairments are observed. Results are noted to converge with those of previous investigators identifying vibrations with maximum intensity in the octave band centered at 125 Hz as the most dangerous. A.L.W.

**A82-25703** † **Evaluation of certain indices used in experimental and field conditions to detect the effects of noise (Otsenka nekotorykh pokazatelei, primenimykh v eksperimental'nykh i proizvodstvennykh usloviiakh dlia ustanovleniia shumovogo vozdeistviia).** L. The cardiovascular function, the perception and processing of visual information, and disturbances in visual and motor coordination are considered as indices of the effects of noise. Noise exposure was found to produce a change in the parameters of information processing, and to reduce the tempo and quality of work. Changes in the visual analyzer function are manifested in an increase in the threshold of the electric sensitivity of the eye and in the reduction of visual acuity. Changes in the visual and motor coordination parameters are manifested in the increase in the time necessary to solve prescribed problems and in the increased number of errors. B.J.

M. Lipovetskii, V. S. Konstantinov, and G. N. Il'ina (Akademiia Medinskikh Nauk SSSR, Leningrad, USSR). *Sovetskaia Meditsina,* no. 4, 1981, p. 10-13. 13 refs. In Russian.

A differential analysis is presented of the responses to physical exercise of males aged 40-59 in the presence or absence of accompanying stenocardia. Subjects were selected from a baseline population of 3907 persons residing in a single urban administrative district who had undergone preliminary cardiac screening. Exercise electrocardiograms performed on a bicycle ergometer or treadmill resulted in an ischemic response in 7.7% of healthy subjects selected randomly from the population, 55.0% of those selected with effort stenocardia, and 10.7% of those selected with hyperlipidemia. Three types of ischemic response are distinguished: isolated EKG ST segment depression, anginal pain without accompanying EKG changes, and a combination of anginal pain with ST segment depression. It is concluded that the ischemic response to physical exercise is related primarily to the degree of coronary insufficiency and the level of arterial pressure. A.L.W.

**A82-25708** † **Determination of the bacterial endotoxin content of the blood of irradiated animals and humans (Opredelenie soderzhaniia bakterial'nykh endotoksinov v krovi zhivotnykh i liudei, podvergnutykh oblucheniiu).** P. N. Kiselev and T. S. In Russian.

The use of actinomycin D to increase organism sensitivity to bacterial lipopolysaccharides thereby allowing the detection of bacterial endotoxins is investigated in mice injected with blood components from irradiated animals. The mice were administered doses of the blood preparations in the amount of 1000 microgram/mouse simultaneously with 10 micrograms of actinomycin D, which amount had been found to increase mouse sensitivity to bacterial endotoxins by a factor of 1500. By this method it is found that the development of endotoxemia in mice irradiated at doses of 3 and 7 g-r has a three-phase character, and that endotoxemia is present in humans at levels from 0.0806 to 0.9166 microgram/ml during therapeutic radiation treatments of the adominal cavity. A.L.W.

Shmeleva (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 91, May 1981, p. 522-525. 6 refs. In Russian.

The magnitude of the respiratory response to physical exercise and its switch-on and switch-off rates were investigated in 12 healthy men breathing different gas mixtures. It is shown that a hypercapnic stimulus reinforced and accelerated the respiratory response to exercise. In addition, it was found that a hypoxic stimulus resulted primarily in increased though transient changes in the ventilation rate at the beginning and the end of the exercise. This effect appears likely to be mediated by fast-responding arterial chemoreceptors. B.J.

**A82-25714 † Investigation of the mechanism of auditory adaptation by the simultaneous recording of auditory evoked potentials of the brain and neurotropic potentials of the cochlea (Izuchenie mekhanizma slukhovoi adaptatsii s pomoshchiu odnovremennoi registratsii slukhovykh vyzvannykh potentsialov kory golovnogo mozga i mikrofonnykh potentsialov ulitki).** B. M. Sagalovich and G. G. Melkumova (Ministerstvo Zdravookhraneniia RSFSR, Moskovskii Nauchno-Issledovatel'skii Institut Ukha, Gorla i Nosa, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 91, May 1981, p. 520-522. 15 refs. In Russian.

Auditory adaptation was examined in 35 rabbits exposed to white noise (90 dB, 0.00002 Pa, 10 min) by the simultaneous recording of evoked potentials of the brain and the neurotropic potentials of the cochlea. The effects of the neurotropic drugs galanthamine, GABA, and nanophyn on the auditory adaptation were also investigated. It is found that the mechanism of auditory adaptation is determined by processes in synapses in central parts of the auditory system and is monitored by the sympathetic nervous system. B.J.

**A82-25717 † Ultrastructural changes in skeletal muscle fibers under the influence of acute physical exercise (Izmeneniia ul'trastruktury skeletnykh myshechnykh volokon pod vliianiem ostrogo fizicheskogo napriazheniia).** M. D. Shmerling, E. E. Filiushina, and I. I. Buzueva (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR). *Arkhiv Anatomii, Gistologii i Embriologii,* vol. 80, Feb. 1981, p. 43-49. 9 refs. In Russian.

The characteristics of the ultrastructural changes in the various types of skeletal muscle fibers which are associated with intense physical exercise are studied. Electron microscopic and stereomorphometric evaluations were performed on the anterior tibial muscles of rats isolated after a single bout of intense exercise (treadwheel running to exhaustion) or three daily intense exercise periods. Ultrastructural changes in both the energetic and contractile apparatus are observed in both the white and red muscle fibers studied, particularly a swelling of the sarcoplasmic reticulum, decrease in relative mitochondrial volume and sharp drop in glycogen content in the white fibers and intercellular edema, mictochondrial destruction and disturbances in myofibril organization in both types of fibers. The observed changes are attributed to an adaptive mechanism involving the rapid mobilization and exhaustion of cellular reserves. A.L.W.

**A82-25718 † Ultrastructural organization of AI and AIV zone projections of the cat auditory cortex to the posterior colliculi of the tectum opticum (Ul'trastrukturnaia organizatsiia proektsii zon AI and AIV slukhovoi kory mozga koshki v zadnikh kholmakh chetverokholmiia).** E. **A82-25720 † Effects of pharmacological agents on the development of hematic hypoxia (Vliianie farmakologicheskikh sredstv na razvitie gemicheskoi gipoksii).** V. N. Kostiuchenkov and N. F. Farashchuk (Smolenskii Meditsinskii Institut, Smolensk, USSR). *Farmakologiia i Toksikologiia,* vol. 45, Jan.-Feb. 1982, p. 76-79. 17 refs. In Russian.

The effects of various pharmacological agents on the development of extreme hematic hypoxia and the dynamics of metabolic processes are compared. Substances belonging to the classes of neuroleptics, adrenal blockers, sympathetic blockers, cholinergic blockers, adrenominetics, psychostimulants, antidepressants and soporifics were administered to rats prior to the injection of sodium nitrite, and evaluated according to animal survival rates and times. It is found that aminazin, apressin, inderal, dopegit, hemedyn and barbamyl all exhibit significant protective action in hematic hypoxia. This action may be connected with a reduced oxygen demand associated with the adrenal and sympathetic blockers, and a suppression of hypothalamic adrenoreactivity by barbamyl. A.L.W.

**A82-25721 † The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration (Vliianie dipidolora, seduksena, pipol'fena i ikh kombinatsii na vazomotornyi refleks i dykhanie).** B. S. Grishin (Sverdlovskii Meditsinskii Institut, Sverdlovsk, USSR). *Farmakologiia i Toksikologiia,* vol. 43, Nov.-Dec. 1980, p. 661-664. In Russian.

Tests performed on narcotized cats show that dipilodor and pipolphen inhibit vasomotor reflexes induced by pain stimulation while diazepam facilitates such reflexes. The administration of dipilodor after diazepam and pipolphen is conducive to the preservation of the inhibitory effect of the analgesic on the vasomotor reflexes, the depressant effect of the drug on respiration being eliminated. B.J.

**A82-25722 Nutrients that modify brain function.** R. J. Wurtman (MIT, Cambridge, MA). *Scientific American,* vol. 246, Apr. 1982, p. 50-59.

The activities of three nutrients which, when administered in pure form or ingested as food, give rise to important changes in the chemical composition of the brain and thereby modify brain functions are discussed. The nutrients are the amino acids tryptophan and tyrosine, and the lecithin constituent choline, which are precursors of the neurotransmitters serotonin, catecholamine and acetylcholine, respectively. Increases in the brain levels of its precursor enhance the synthesis of a neurotransmitter, which in turn may cause the amplification of neuron signals due to increased neurotransmitter release. The observations relating nutrient intake to neurotransmission originated in studies in which it was found that the amount of tryptophan available for conversion into serotonin depended on plasma amino acid ratios, suggesting a mechanism governing food preferences. Nutrient-neurotransmitter relations have been used in a variety of clinical applications, including the treatment of tardive dyskinesia, and in prospective treatments of memory disorders associated with old age, Parkinson's disease, hypertension and depression. A.L.W.

**A82-25801 † The participation of estradiol and progesterone in animal body mass regulation mechanisms (Uchastie estradiola i progesterona v mekhanizmakh reguliatsii massy tela u zhivotnykh).**

T. M. Eroshenko (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Problemy Endokrinologii*, vol. 28, Jan.-Feb. 1982, p. 82-88. 90 refs. In Russian.

**A82-25802** † **Reflexometry as an additional method of investigating hypoactivity in the thyroid gland (Refleksometriia kak dopolnitel'nyi metod issledovaniia pri gipofunktsii shchitovidnoi zhelezy).** G. A. Gaidina, L. S. Matveeva, and S. P. Lazareva (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Problemy Endokrinologii*, vol. 28, Jan.-Feb. 1982, p. 34-38. 10 refs. In Russian.

In patients with severe and moderate hypothyroidism, a correlation is established between the Achilles tendon response time and certain biochemical indicators of thyroid activity. The study is carried out before treatment has begun or during substitution therapy with hormones. Also established is a correlation between the severity of the case and these indicators. It is found that the correlation continues to hold after treatment is begun, although restoration of the Achilles tendon response time lags behind the disappearance of other symptoms. It is concluded that this response time can serve as an additional criterion for diagnosing the existence and severity of hypothyroidism. C.R.

**A82-25803** † **The influence of the type of trophic interactions on the dynamics of a two-level ecosystem (Vliianie tipa troficheskikh vzaimodeistvii na dinamiku dvukhurovnevoi ekosistemy).** D. A. Sarancha (Akademiia Nauk SSSR, Vychislitel'nyi Tsentr, Moscow, USSR). *Zhurnal Obshchei Biologii*, vol. 43, Jan.-Feb. 1982, p. 96-108. 6 refs. In Russian.

A mathematical model of an ecosystem comprising two trophic levels linked by interactions of the predator-prey type is considered. Each of the levels contains a large number of species. Equations are derived giving the total biomass of the levels. The behavioral dynamics of the biomass as a whole and of individual species is analyzed for various degrees of specialization in the predation. It is shown that trophic specialization leads to a stabilization of the ecosystem. C.R.

**A82-25804** † **The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness (Pronitsaemost' limfaticheskikh sosudov myshts verkhnikh konechnostei pri vibratsionnoi bolezni).** D. K. Abramovich-Poliakov, N. I. Pilipenko, R. I. Voloshina, S. P. Krakovskaia, and N. I. Teslenko (Nauchno-Issledovatel'skii Institut Gigieny Truda i Profzabolevanii; Khar'kovskii Meditsinskii Institut; Khar'kovskaia Oblastnaia Klinicheskaia Bol'nitsa, Kharkov, Ukrainian SSR). *Vrachebnoe Delo*, Mar. 1981, p. 113-115. In Russian.

The permeability of the lymphatic capillaries of the muscles of the upper extremities in patients with vibration sickness is studied in a tracer experiment involving the use of I-131 labeled human serum albumin. The resorption of intramuscular labeled albumin into the lymphatic system is found to take place at a significantly faster rate in metal trimmers suffering from the first and second stages of vibration sickness than in controls, and to depend on the level of the disease. In addition, subjects suffering from the angiodistonic syndrome exhibited increased lymphatic vessel permeability only on the left side, while those with angiospastic syndrome exhibited a more marked enhancement in permeability on both sides. Results are explained by the effects of vibration and compensatory changes associated with it in increasing lymph capillary permeability due to the increased spasm activity of the blood capillaries. Iu. Malchuk (Moskovskii Meditsinskii Stomatologicheskii Institut, Moscow, USSR). *Sovetskaia Meditsina*, no. 1, 1982, p. 7-10. 13 refs. In Russian.

Changes in oxygen consumption, oxyhemoglobin dissociation and tissue oxygen levels at various levels of physical exercise are studied in patients with chronic ischemic heart disease. Measurements were performed on 120 patients with varying levels of exercise tolerance and 20 healthy controls during bicycle ergometer exercise at stepwise increasing levels. Increases in oxygen consumption are found in proportion to the level of exercise, however are lower in patients with low exercise tolerance than in the controls of patients with high tolerance. Increases in tissue oxygen content were practically absent in the low-tolerance group, while in those with a moderate tolerance increases were significantly lower than in the controls. An increase in the oxygen tension at which 50% of oxyhemoglobin was dissociated is observed equally in all groups, depending only on exercise performed. Tissue oxygen content is shown not to be strictly dependent on oxygen consumption, but to vary in response to additional factors including oxyhemoglobin dissociation, A.L.W.

*Biologii i Meditsiny,* vol. 92, Oct. 1981, p. 387-389. 12 refs. In Russian.

It is noted that there is no consensus on the efferent mechanisms acting to increase the heart rate in depressor baroreflex. Experiments are carried out on unanesthetized cats 3-4.4 kg in weight in order to determine the dependence of the chronotropic reaction on the initial heart rate. It is found that the magnitude of this reaction depends on the spontaneous fluctuations in the original heart rate. C.R.

**A82-25814 † Effects of whole-body vibration and noise on the toxicity and risk parameters of chemical substances (Vliianie obshchei vibratsii i shuma na parametry toksichnosti i opasnosti khimicheskikh veshchestv).** R. Ia. Shterengarts and N. I. Solomatina. *Gigiena i Sanitariia,* May 1981, p. 86, 87. In Russian.

The effects of whole-body vibration and accompanying noise as found in transportation and manufacturing work environments on the toxicity and risk factors associated with the basic ingredients of exhaust gases are investigated. Experiments involved the exposure of animals to vibration at 4-63 Hz and 0.12-0.21 m/sec per sec and associated noise for 4 hours daily for a period of 2 months. Vibration and noise are found to decrease measured LD50 and CL50 for benzole, formaldehyde, SO2 and NO2 by 10-30%, while the thresholds for acute and chronic effects are decreased two- to six-fold, and more. The cumulation coefficient for the substances with cumulative properties (benzole, formaldehyde) is increased from 2 to 4 times by vibration and noise, most likely due to the slowing of toxin elimination processes. Results suggest the advisability of lowering maximum chemical exposure limits in vibration environments. A.L.W.

**A82-25815 † Thermoregulation and morbidity in coal miners (Sostoianie termoreguliatsii i zabolevaemost' gornorabochikh ugol'nykh shakht).** L. M. Poliak (Vostochnyi Nauchno-Issledovatel'skii Institut po Bezopasnosti Rabot v Gornoi Promyshlennosti, Kemerovo, USSR) and F. Kh. Zinger (Donetskii Nauchno-Issledovatel'skii Institut Gigieny Truda i Profzabolevanii, Donetsk, Ukrainian SSR). *Gigiena i Sanitariia,* July 1981, p. 73, 74. In Russian.

The thermal status of coal miners is evaluated and compared with their morbidity experience. Measurements of skin temperature and visual-motor reaction time were made four times during a work shift: in the changing room, immediately before descent into the mine, after exit from the shaft, and after arrival at the changing room from the mine. Skin temperature is found to decline and reaction time to increase in proportion to the time spent in travelling to and from the mine on foot or in an unheated transport while wearing the mining outfit. Examination of morbidity statistics reveals a significantly greater proportion of respiratory diseases in miners transported to the shaft in an unheated transport than in those using a covered walkway, and a significant incidence of pyodermatitis, which is attributed to both cooling and coal dust in the work environment. Results suggest the potential of heated transports and covered walkways in reducing miner morbidity and increasing productivity. A.L.W.

**A82-25819 † Effects of emotional stress in bus drivers (Vliianie emotsional'nogo napriazheniia u voditelei avtobusov).** T. I. Akhmedov (Ukrainskii Institut Usovershenstvovaniia Vrachei, Kharkov, Ukrainian SSR). *Gigiena i Sanitariia,* May 1981, p. 75, 76. 7 refs. In Russian.

The effects of the nervous and emotional stresses encountered in operator activity on intersensory interactions are investigated in bus drivers of various levels of experience. Evaluations of subject optical, kinetic and auditory thresholds and the correlations between them were performed before and after the work shift in drivers exhibiting different motivational and emotional states. Results demonstrate the feasibility of using intersensory correlation levels and changes in them during the work shift in the evaluation of nervous and emotional fatigue, the assessment of readiness for specialized functions, and the development of optimal work-rest cycles. A.L.W.

**A82-25820 † Biophysical methods for the study of ecosystems and the control of biosynthesis within them (Biofizicheskie metody issledovaniia ekosistem i upravleniia ikh biosintezom).** I. A. Terskov (Akademiia Nauk SSSR, Institut Fiziki, Krasnoyarsk, USSR). *Akademiia Nauk SSSR, Sibirskoe Otdelenie, Izvestiia, Seriia Biologicheskikh Nauk,* Dec. 1981, p. 59-67. 95 refs. In Russian.

Work carried out in the period 1975-1980 concerning the organizational principles of cellular systems of various levels of complexity and technological means for their control is reviewed. Theoretical and experimental efforts included the development of steady-state biophysical systems performing high-rate biosynthesis studies of the development of open and closed ecosystems, and highly closed ecosystems containing man. Studies with practical applications involved the growth of high-protein hydrogen bacterial biomass as well as carboxiodobacteria, iron-oxidizing bacteria, luminescent bacteria, and thermophilic blue-green algae, plant growth under high illumination, the growth of invertebrates in nonproportional flow cultures, the remote sensing of ecosystem conditions, and bathyphotometric sounding. Future efforts with practical applications are planned in the areas of the biophysical bases for biosynthesis control in cells and organisms, the homeostasis control, the construction of artificial ecosystems and biophysical systems for monitoring natural environments. A.L.W.

**A82-25821 † Theoretical and experimental analysis of material turnover in a closed microecosystem. I - Construction of a mathematical model (Teoretiko-eksperimental'nyi analiz krugovorota veshchestva v zamknutoi mikroekosisteme. I - Postroenie matematicheskoi modeli).** N. S. Abrosov, V. G. Gubanov, and B. G. Kovrov (Akademiia Nauk SSSR, Institut Fiziki, Krasnoyarsk, USSR). *Akademiia Nauk SSSR, Sibirskoe Otdelenie, Izvestiia, Seriia Biologicheskikh Nauk,* Dec. 1981, p. 68-75. 25 refs. In Russian.

A mathematical model of a simple closed microecosystem is developed which takes into account the dynamics of the fundamental elements limiting biological processes and the consumption of light energy, and may be used as a basis for experiments on an actual microcosm. The model considers a homogeneous ecosystem containing one type of producer (autotroph) and one type of reducer (heterotroph), which is capable of supporting the processes of biomass growth, respiration, and death and the mineralization of nonliving organic matter. Equations are formulated within the framework of the concept of systems with limiting factors. A.L.W.

**A82-25822 † Equipment for artificial pulmonary ventilation and inhalation anesthesia (Apparaty iskusstvennoi ventiliatsii legkikh i ingaliatsionnogo narkoza).** R. I. Burlakov, Iu. S. Gal'perin, and A. I. Trushin (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Meditsinskogo Priborostroeniia, Moscow, USSR). *Meditsinskaia Tekhnika,* Mar.-Apr. 1981, p. 24-27. In Russian.

Equipment currently available for use in artificial pulmonary ventilation and inhalation anesthesia applications is reviewed. The artificial ventilation equipment may be divided into two categories: that intended for the provision of prolonged pulmonary ventilation, which utilize two energy sources for breath generation and control and show an increasing tendency to incorporate electronic measurement and control circuits, and that intended for short-term use during anesthesia or emergency resuscitation, which are also using electronic control to expand their functional capabilities. Inhalation anesthesia equipment is developing in the areas of improved measuring equipment and features assuring ease of operation, including portability and gas analysis. A.L.W.

**A82-26047** **Cockpit automation and workload reduction - Too much of a good thing.** C. Bulloch. *Interavia,* Mar. 1982, p. 263, 264.

Three important lines of inquiry in the area of cockpit automation and pilot workload reduction involve the definition and measurement of aircrew workload, the consideration of what is optimum workload, and examination of disadvantages of automation. Growing evidence indicates that people have multiple capacity pools of intellect that can be tapped simultaneously, particularly when the tasks performed by the brain are different in nature. Physiological tools such as infrared video cameras and electroencephalographs show that the eye and brain are stimulated by and respond to both internal and external events. Extensive automation tends to degrade the pilot's skills and may actually increase hazards for some aircraft. The chief driving force toward automation is not safety, but reduction of personnel costs. C.D.

**A82-26228** **Cardiorespiratory assessment of 24-hour crash-diet effects on altitude, +Gz, and fatigue tolerances.** M. T. Lategola, P. J. Lyne, and M. J. Burr (FAA, Civil Aeromedical Institute, Oklahoma City, OK). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 201-209. 30 refs.

The effects of crash dieting, defined as total abstinence from food but not water, on pilot tolerances to fatigue under a submaximum physical workload, simulated +Gz exposure and moderate altitude are investigated. Subjects medically qualified as pilots underwent physiological monitoring for hemodynamic and respiratory functions during 2 min of lower body negative pressure of -40 torr (equivalent to +2Gz), 118 min of exposure to a simulated altitude of 3810 m, and ergometry at 50 W for 6 min, all preceded or not by a 24-hour fast. Ten out of the 11 subjects maintained adequate blood oxygenation during altitude exposure and tolerated 2 min of LBNP at altitude and pedal ergometry after fasting or not fasting, while a single subject experienced syncope during LBNP after fasting. Results suggest the advisability of warning general aviation pilots to avoid maneuvers with accelerations greater than +2Gz immediately after a total food fast of 24 h or more. A.L.W.

**A82-26229** **Physiological, biochemical, and performance responses to a 24-hour crash diet.** E. A. Higgins, H. W. Mertens, J. M. McKenzie, and G. E. Funkhouser (FAA, Civil Aeromedical Institute, Oklahoma City, OK). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 210-217. 26 refs.

The effects of a 24-h crash diet, during which no food is taken, on pilot task performance, and physiological and biochemical parameters are investigated. Twelve healthy but overweight male subjects, able to pass a Class III pilot medical examination, were monitored for hemodynamic parameters, blood and urinary composition and subjective fatigue and performed a series of multiple task performance tests while breathing a gas mixture equivalent to 3310 m altitude during 28 h of either fasting or a standardized eating regimen. Whereas no significant differences between fasting and control periods were found in heart rate, blood pressure, serum electrolytes, subjective fatigue and urinary excretion of K(+), epinephrine and norepinephrine, body temperatures were lower during fasting and serum glucose levels decreased. Hematocrit increased more for the crash diet than the normal, while urinary 17-ketogenic steroid excretion during sleep was less. Complex task performance showed no significant differences at low workloads, however performance was enhanced at medium and high workloads during fasting. A.L.W.

**A82-26230** * **Conditioned feeding suppression in rats produced by cross-coupled and simple motions.** R. A. Fox (San Jose State University, San Jose, CA) and N. G. Daunton (NASA, Ames Research Center, Moffett Field, CA). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 218-220. 16 refs. Grant No. NCA2-OR-675-801.

Results are presented of an experiment on the induction of motion sickness in rats by the use of cross-coupled accelerations of magnitudes similar to those used in human experiments. Accelerations were produced in a seesaw apparatus with rotating disks supporting the animal cages mounted on each seesaw arm, and motion sickness was assessed according to the consumption of a sweet food previously offered to the animals immediately before the motion treatment. During a 1-hour test session 72 h after motion treatment and after a 24-h fast, rats having undergone cross-coupled vertical sinusoidal and rotational motion are observed to consume less food than those having experienced either type of motion alone, or no motion. The ordering of the conditioned suppressive feeding effects is consistent with the amounts of vestibular stimulation produced by the respective motions. The results support the existence of motion sickness effects in rats, even though they are unable to vomit. A.L.W.

**A82-26231** **Phenytoin - Ineffective against acute mountain sickness.** R. L. Burse, M. Landowne, A. J. Young, and J. T. Maher (U.S. Army, Research Institute of Environmental Medicine, Natick, MA). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 221-225. 26 refs.

**A82-26232** **Hemodynamic responses in orthostasis following 5 hours of sitting.** E. Shvartz, R. C. Reibold, R. T. White, and J. G. Gaume (Douglas Aircraft Co., Long Beach, CA). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 226-231. 39 refs.

The effects of a prolonged period of quiet sitting on hemodynamic responses during orthostasis are determined in light of the possible adverse effects of sitting fatigue on pilot performance. Subjects were administered an orthostatic test consisting of 20 min of quiet standing before and after 5 h of quiet sitting, and hemodynamic responses, including heart rate, blood pressure, stroke volume and calf and thigh blood flow, were recorded. During the 5-h sitting period, increases in blood pressure and total peripheral resistance are found, along with a decrease in calf blood flow and an increase in venous pooling in the calf. With respect to the pre-sitting orthostatic test, subjects exhibited decreased heart rate and cardiac output, increased pressure and total peripheral resistance, decreased calf blood flow and increased calf venous pooling during the second test. Results demonstrate that prolonged sitting constitutes a mild orthostatic stress in which an increase in venous pooling is compensated by an increase in blood pressure, whereas the subsequent transition to standing elicits insufficient compensation resulting in a low cardiac output. A.L.W.

**A82-26233** **G-tolerance enhancement - Straining ability comparison of aircrewmen, nonaircrewmen, and trained centrifuge subjects.** J. E. Whinnery (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine*, vol. 53, Mar. 1982, p. 232-234. 9 refs.

A comparative study is presented of the abilities of fully trained aircrewmen, nonaircrewmen and trained centrifuge subjects to increase their acceleration tolerance by the use of a protective straining maneuver. Tolerances to +Gz acceleration were measured in 198 aircrewmen, 131 nonaircrew and 27 trained acceleration subjects during relaxed gradual onset acceleration runs and gradual onset acceleration runs using straining maneuvers. Although no significant differences are found between the relaxed tolerances of any of the groups, the trained centrifuge subjects exhibited an approximately 1 G greater enhancement in straining tolerance over relaxed than both the nonaircrewmen and the aircrewmen, who included trained fighter, attack and reconnaissance pilots. It is suggested that significant enhancements in pilot acceleration tolerance may be achieved by specific G training, preferably during undergraduate pilot training. A.L.W.

**A82-26234** **The wearing of hydrophilic contact lenses aboard a commercial jet aircraft. I - Humidity effects on fit.** W. G. Eng, L. K. Harada, and L. S. Jagerman (Eye Clinic, Alameda, CA). *Aviation, Space, and Environmental Medicine*, vol. 53, Mar. 1982, p. 235-238. 12 refs. Research supported by the Barnes-Hind Pharmaceutical Co.

The environmental conditions in a commercial jet aircraft cabin are evaluated in relation to possible changes in the fit of hydrophilic (soft) contact lenses during flight. Measurements of cabin pressure, humidity and temperature were made during a round-trip flight between Oakland, CA, and Honolulu, HI, concurrently with keratometer measurements of lens fit in seven subjects fitted with hydrophilic lenses. Data indicate the cabin environment to be essentially the same for both flights, with humidity declining from 47% to 11% shortly after takeoff, pressure declining immediately after takeoff, and temperature remaining constant. No significant differences in fit are found between subjects using and not using hydrating eyedrops. A moderate blurring and distortion of the projected pattern on the lens surface was observed, which is closely related to the change in cabin humidity. A.L.W.

**A82-26235** **Increase in jammed word intelligibility due to training of listeners.** C. W. Nixon, R. L. McKinley, and T. J. Moore (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). *Aviation, Space, and Environmental Medicine*, vol. 53, Mar. 1982, p. 239-244. 5 refs.

The occurrence of a learning process associated with the understanding of voice communications in the presence of jamming signals is investigated. Work intelligibility was measured as a function of time for naive subjects wearing standard flight helmets and oxygen masks and communicating through a standard aircraft intercommunication system under typical communication conditions, in the presence of simulated cockpit noise, and in the presence of a jamming signal in the simulated noise. Subject performance is observed to improve with time in each communications environment, requiring periods of approximately 75 min, 60 min and 300 min to reach a learning plateau in the baseline, additional noise, and noise with jamming environments, respectively. Performance is also observed not to deteriorate following a two-week period away from the task. Recommendations are made for further study of such factors as jammer-specific performance, fatigue effects, individual differences and training models and specifications. A.L.W.

**A82-26236** **An introduction to disaster - Some considerations of a psychological nature.** T. J. Singer (U.S. Navy, Pacific Fleet, Naval Air Station North Island, CA). *Aviation, Space, and Environmental Medicine*, vol. 53, Mar. 1982, p. 245-250. 42 refs.

Literature dealing with the psychological reactions of victims and relief personnel to disaster is reviewed. Individual and group reactions, which are most often adaptive and responsible rather than panicked or psychotic, can be divided into phases, including a period of impact, period of recoil and post-traumatic period. The specific reactions encountered range from anger, guilt, defensive psychological reactions, fear of insanity, abnormal behavior resulting from medical problems, and panic to long-term reactions affecting physical and mental health, and are often encountered in rescue workers as well as disaster victims. Experience with disasters and crisis intervention has suggested the effectiveness of psychological first aid in alleviating psychological distress and preventing long-term emotional problems, and has pointed out the potential value of planning for the provision of post-disaster crisis intervention and psychological support. A.L.W.

**A82-26237** **Serial personality evaluations of repatriated U.S. Air Force southeast Asia POWs.** R. D. Wheatley (USAF, School of Aerospace Medicine, Brooks AFB, TX) and R. J. Ursano (University of the Health Sciences, Bethesda, MD). *Aviation, Space, and Environmental Medicine*, vol. 53, Mar. 1982, p. 251-257. 19 refs. USAF-supported research.

Preliminary results of psychometric evaluations of all 332 repatriated U.S. Air Force former prisoners of war in southeast Asia are presented. The repatriated POWs (RPWs), who were divided into groups captured before and after 1969, responded to a Minnesota Multiphasic Personality Inventory (MMPI) within a year of return and after a period of 5 years. Group MMPI profiles of the pre- and post-1969 RPW groups fell within normal limits on each of the clinical scales and resembled fairly closely those of a reference group of current aircrewmembers. Observations suggest, however, that the pre-1963 group deviated farther from normal than the post-1969 group, showing increased repression and denial and greater suspicion and distrust, and remained essentially unchanged in serial evaluations while the post-1969 group moved toward the aircrew standard. It is concluded that the pre-1969 RPWs, who had a significantly longer and harsher captivity experience, may be at increased risk for psychological distress. A.L.W.

**A82-26238** **Syncope in aircrew.** W. H. Sledge (Yale University, New Haven, CT) and J. A. Boydstun (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine*, vol. 53, Mar. 1982, p. 258-265. 6 refs. AF Project 7755-18-08.

A study is reported of the role of psychosocial factors in the onset of various forms of syncope in aircrew members. Aircrew referred for medical evaluation as a result of fainting episodes and unrelated problems underwent a standardized psychiatric interview, psychological tests and a complete medical evaluation. Comparison of groups diagnosed as exhibiting vasovagal, micturition and miscellaneous syncopes with the controls indicates little differences in personality and character traits, although differences on the mental status examination suggest that both the vasovagal and micturition syncope patients were more prone to anxiety and increased defensiveness. Psychological tests indicate some slight nonspecific differences between the vasovagal and control patients and the micturition and control patients. The vasovagal patients tended to be more anxious about their job and evidence increased affective arousal around the time of the fainting episode relative to the controls and the micturition patients, who exhibited a greater frequency of antecedent illness. Psychological consequences of syncope are similar in the three groups. A.L.W.

**A82-26239** **Clinical and experimental evidence for the use of hypothermia in decompression sickness.** E. H. Simmons, S. W. O'Driscoll, and J. A. Gamarra (Toronto East General and Orthopaedic Hospital; Toronto, University, Toronto, Canada). *Aviation, Space, and Environmental Medicine*, vol. 53, Mar. 1982, p. 266-268. 11 refs. Research supported by the Rehabilitation Foundation for the Disabled and Workmen's Compensation Board of Ontario.

Clinical experience and experimental data concerning the use of hypothermia in the treatment of decompression sickness is presented. The clinical material was provided in observations of cases of decompression sickness in workers during the construction of a sewer and subway. In certain severe cases, recompression alone was insufficient to relieve major manifestations of decompression sickness, and improvement occurred only after the application of at first regional, then general, hypothermia. Experiments involved the exposure of rabbits to pressures of 60 or 70 psi for one hour, followed by sudden decompression over 70 sec. Mortality rates approached 100% in untreated rabbits or rabbits placed in air at 0 C after decompression, while cooling in water at 3 C for a period of 4 min significantly reduced the mortality. Results support the use of hypothermia as an adjunctive mode of therapy for decompression sickness, and justify further experimental and clinical investigations. A.L.W.

**A82-26240** **Sarcoidosis in aircrew.** A. J. C. Balfour (RAF, Institute of Pathology and Tropical Medicine, Aylesbury, Bucks., England). *(Joint Committee on Aviation Pathology, Scientific Session, 12th, Aylesbury, Bucks., England, Oct. 14-16, 1980.) Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 269-272. 10 refs.

The prevalence of sarcoidosis in military aircrew involved in fatal aircraft accidents is discussed in light of the recent finding that sarcoidosis is frequently capable of causing collapse and sudden death. Examination of the prevalence of sarcoid-like granulomata upon autopsy of aircraft accident fatalities reveals the lesions to be present in 3.06% of military aircrew, but only 1.4% and 1.03% of civil pilots, and passengers and glider pilots, respectively. When compared with the clinical incidence of sarcoidosis, the postmortem prevalence seems high, particularly in aircrew, however may be explained in part by the presence of subclinical disease. In the 13 accidents with sarcoid-like granulomata found at autopsy, seven may have been caused by pilot incapacitation, a consequence of 5-10% of all cases of sarcoidosis. The association between sarcoidosis and fatal accidents may then be causal, a result of predisposing factors in aviation to the development of the disease, or a chance finding. A.L.W.

**A82-26241** **The diving response in clinical medicine.** B. A. Booden (Queen's Medical Centre, Nottingham, England; Repatriation General Hospital, Daw Park, Australia). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 273-276. 42 refs.

The diving response has seen application in recent years to the therapeutic treatment of paroxysmal supraventricular tachycardia and the investigation of autonomic nervous system dysfunction, however its use has been limited due to user uncertainties. The present paper reviews current knowledge of the factors influencing the diving response in man, procedures for optimizing its clinical effectiveness and the relation of the response to evoked and pre-existing arrhythmias. The diving response depends upon features of breath-holding and face immersion, as well as general personal factors. It is best induced with the patient in a relaxed condition, with breath held for a period of 20 to 30 sec while the face is immersed in water at 20 to 10 C. Cardiac arrhythmias experienced during the diving response have included nodal rhythm, atrial and ventricular ectopic beats, escape beats and idioventricular rhythm, although none has been known to be irreversible or fatal. Evidence thus indicates that the procedure is safe, however it would be wise to use it with resuscitation facilities available. A.L.W.

**A82-26242** **Follow-up of 14 abnormal electroencephalograms in asymptomatic U.S. Air Force Academy cadets.** W. D. Everett and M. S. Akhavi (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 277-280. 8 refs.

The paper reports a 10-15 year follow-up study of 14 former U.S. Air Force Academy cadets disqualified from flight training on the basis of electroencephalogram abnormalities. The individuals were identified as having Mayo Classification Grade III dysrhythmias, including focal or diffuse spikes, sharp waves or spike slow wave complexes, upon the screening of 2947 asymptomatic cadets from 1965 through 1969. The observed EEG abnormalities are not correlated with a past history of head trauma. In the 10-15 years following detection, none of the subjects developed a seizure disorder. Results thus do not provide justification for the current military practice of disqualifying asymptomatic individuals on the basis of abnormal EEG patterns alone, as the incidence of seizures in this population is quite low. A.L.W.

**A82-26243** **Tennis elbow in aviators.** R. W. Farr (U.S. Navy, San Francisco, CA). *Aviation, Space, and Environmental Medicine,* vol. 53, Mar. 1982, p. 281, 282. 5 refs.

Three cases of lateral epicondylitis (tennis elbow) in aviators are described, and the symptomology, etiology, treatment and prevention of the disorder are discussed. The presenting complaint of lateral epicondylitis is lateral elbow pain sometimes radiating down to the wrist, and the disorder is seen to develop in individuals performing activities involving repeated flexion and extension of the wrist against resistance, or repeated pronation and supination of the forearm with the elbow extended. Relief of symptoms can usually be achieved with conservative therapy, including a limitation of hand motion, splints, salicylates, steroid injections and isometric exercise. In the three case histories presented, two were attributed to duties involving flight operations, and symptoms were alleviated by a temporary suspension from flight operations, coupled, in one case, by changes in biomechanical modalities of performing the aggravating motion. A.L.W.

**A82-26522** † **The physiology and hygiene of the individual protection of man from the cold (Fiziologiia i gigiena individual'noi zashchity cheloveka ot kholoda).** V. S. Koshcheev. Moscow, Izdatel'stvo Meditsina, 1981. 288 p. 388 refs. In Russian.

The hygienic and normal and pathological physiological aspects of the development and evaluation of equipment for the individual protection of man from the cold as encountered in polar and underwater environments are discussed. The physiological characteristics of heat exchange under conditions of cooling are examined, with attention given to thermoregulatory responses to whole-body and local cooling, the optimal and allowable thermal conditions for work in the cold, physiological limits to cooling, and means for the rapid normalization of thermal condition following cooling. Biotechnological questions of individual protection from the cold are then considered, including the construction and use of everyday winter clothing, individual protective systems and protective systems with supplemental heating, and the protection of the face and respiratory organs during work in the cold, and protective equipment for work in the cold is presented. A.L.W.

**A82-26525** † **Pathological anatomy and ultrastructure of the heart /Combined morphological investigation of the general pathological process in the myocardium/ (Patologicheskaia anatomiia i ul'trastruktura serdtsa /Kompleksnoe morfologicheskoe issledovanie obshchepatologicheskogo protsessa v miokarde/).** L. M. Nepomniashchikh (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR). Novosibirsk, Izdatel'stvo Nauka, 1981. 324 p. 730 refs. In Russian.

The morphogenesis, pathological anatomy and ultrastructural manifestations of myocardial pathologies are examined on the basis of light, polarization and electron microscopy, and stereological, and histochemical studies. Following a review of contemporary methods for the structural and histocytochemical study of the heart, results of electron microscopic, histochemical and stereometric studies of the normal heart and its development are presented. Attention is also given to cardiac morphology in models of localized myocardial damage, experimental myocardial infarction, experimental atherosclerosis and ischemic heart disease. The structural bases of the adaptive and compensatory responses in the development of general cardiac pathology are then discussed in relation to parenchymatous-stromal-microcirculatory interelations. A.L.W.

**A82-26547** † **Systemic brain activity /Experimental investigation/ (Sistemnaia deiatel'nost' mozga /Eksperimental'noe issledovanie/).** N. A. Shustin. Leningrad, Izdatel'stvo Nauka, 1980. 104 p. 180 refs. In Russian.

The book represents a synthesis of experimental investigations and literature data concerning the organization of the integrative functions of the brain during conditioned reflex activity as a model of more complex forms of systemic activity. Experiments involved the study of conditioned motor reflexes in the dog to the relations between two stimuli presented either simultaneously or in sequence, and the effects of the removal of the frontal lobe on the formation of these reflexes. The activities of the motion analyzer, stimulus properties, and the motor and secretory components is discussed, together with the role of the prefrontal lobes in the organization of the response. A.L.W.

**A82-26550** † **Physics and biology (Fizika i biologiia).** M. V. Vol'kenshtein. Moscow, Izdatel'stvo Nauka, 1980. 152 p. 46 refs. In Russian.

Important problems in contemporary biological physics are discussed. Following a review of the historical development of biophysics as the branch of science concerned with the study of life based on the laws and methods of experimental physics, consideration is given to the fundamental principles of physics and chemistry, the properties of electron waves, strong and weak molecular interactions, and the physics of macromolecules. The fields of molecular biophysics and molecular biology are discussed, and questions of protein biosynthesis and the genetic code, cellular biophysics and bioenergetics, thermodynamics and information theory in biology, the physical and mathematical modeling of biological processes and biological development are examined.

**A82-26582 *** **Plant response to solar ultraviolet radiation.** M. M. Caldwell. In: Physiological plant ecology I. Berlin, Springer-Verlag (Encyclopedia of Plant Physiology New Series. Volume 12 A), 1981, p. 169-197. 82 refs. NASA-sponsored research.

Plant reactions and mechanisms of reaction to solar UV radiation are reviewed, along with characteristics of plants which enhance UV tolerance. Wavelength regions to which proteins are particularly sensitive are examined and the possibility of synergistic effects from photoreactions to multiple wavelengths is considered, along with available evidence of nonadditive plant spectral responses to UV radiation. Decreases in atmospheric ozone content are explored in terms of UV wavelengths which would increase with the ozone decreases, particularly for UV-B, which depresses photosynthesis and would increase 1% with a 16% reduction of stratospheric ozone. Higher elevations are projected to display effects of increased UV incident flux first, and global distributions of UV increases due to atmospheric inhomogeneity and water surface clarity are examined. Finally, the response of plant nucleic acids, DNA, chlorophyll to enhanced UV are described, along with repair, avoidance, and optical mechanisms which aid plant survival. M.S.K.

**A82-26583 *** **A model for protocellular coordination of nucleic acid and protein syntheses.** S. W. Fox (Miami, University, Coral Gables, FL). *(International Society for the Study of the Origin of Life, Symposium on Biochemical Evolution of the Genetic Apparatus, Potsdam, NY, July 2, 1980.)* In: Science and scientists. Tokyo, Japan Scientific Societies Press, 1981, p. 39-45. 41 refs. Grant No. NGR-10-007-008.

The proteinoid model for the coordination of protein synthesis with nucleic acid coding within the evolving protocell is discussed. Evidence for the self-ordering of amino acid chains, which would enhance the catalytic activity of a lysine-rich proteinoid, is presented, along with that for the preferential formation of microparticles, particularly proteinoid microparticles, in various solutions. Demonstrations of the catalytic activity of lysine-rich proteinoids in the synthesis of peptide and internucleotide bonds are pointed out. The view of evolution as a two stage sequence in which the geological synthesis of peptides evolved to the protocellular synthesis of peptides and oligonucleotides is discussed, and contrasted with the alternative view, in accord with the central dogma, that nucleic acids arose first then governed the production of proteins and protocells.

A.L.W.

**A82-26589 *** **Copolyamino acid fractionation and protobiochemistry.** S. W. Fox (Miami, University, Coral Gables, FL). *Journal of Chromatography,* vol. 215, 1981, p. 115-120. 39 refs. Grant No. NGR-10-007-008.

Investigation of the origins of living things by the uniquely appropriate method of successive approximation in attempted retracement of steps in molecular evolution has yielded: a comprehensive theoretical flowsheet from archaic inanimate matter to an infrastructured, microscopic, protoreproductive, protometabolic protocell; a laboratory model of the same; and an explanatory assessment of the natural variation component of Darwinian evolution. For each of these, the significance is dependent upon awareness of the intrinsic tendency of amino acids, in mixed sets, to order themselves. Without such awareness, it is believed these vistas would have been delayed for decades. Selfordering would have in turn been difficult to recognize and support were it not for the chromatographic developments in fractionation of copolyamino acids. (Author)

**A82-26596 *** **Models for protocellular photophosphorylation.** P. R. Bahn and S. W. Fox (Miami, University, Coral Gables, FL). *BioSystems,* vol. 14, 1981, p. 3-14. 69 refs. Grant No. NGR-10-007-008.

Several photoreactions for transducing light energy have been analyzed for their relevance as models for protocellular photophosphorylation. Inorganic ions and compounds could have played a role in protocellular photophosphorylation. Organic catalysts may have been the next significant agents used by protocells for photophosphorylation. Membranous photophosphorylation probably became the most recent type of photoenergy transduction to be acquired by protocells; it is still used by modern cells although components of the other types of phosphorylation are found in present day cells. Recorded yields of energy-rich phosphates from the model reactions discussed are small. Arguments are advanced that such yields could have been sufficient to have fueled protocellular metabolism, which was probably very slow compared to modern cellular metabolism. Future prospects for research in this area are discussed. (Author)

**A82-26597 *** **Formation of peptides from amino acids by single or multiple additions of ATP to suspensions of nucleoproteinoid microparticles.** T. Nakashima and S. W. Fox (Miami, University, Coral Gables, FL). *BioSystems,* vol. 14, 1981, p. 151-161. 47 refs. Grant No. NGR-10-007-008.

The synthesis of peptides from individual amino acids or pairs of amino acids and ATP in the presence of catalysis by nucleoproteinoid microparticles is investigated. Experiments were performed with suspensions formed from the condensation of lysine-rich and acidic proteinoids with polyadenylic acid, to which were added glycine, phenylalanine, proline, lysine or glycine-phenylalanine mixtures, and ATP either at once or serially. Peptide yields are found to be greatest for equal amounts of acidic and basic proteinoids. The addition of imidazole is found to alter the preference of glycine-phenylalanine mixtures to form mixed heteropeptides rather than homopeptides. A rapid ATP decay in the peptide synthesis reaction is observed, and a greater yield is obtained for repeated small additions than for a single addition of ATP. The experimental system has properties similar to modern cells, and represents an organizational unit ready for the evolution of associated biochemical pathways. A.L.W.

**A82-26602 *** **Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis.** A. H. Teramura (Maryland, University, College Park, MD) and M. M. Caldwell (Utah State University of Agriculture and Applied Science, Logan, UT). *American Journal of Botany,* vol. 68, Aug. 1981, p. 934-941. 26 refs. Contract No. NAS9-14871.

**A82-26611** **Identification of the human operator in a closed-loop system (Identifikatsiia na choveka-operator v zatvorena sistema za upravlenie).** I. P. Popchev, I. D. Zaprianov, and K. I. Tropolov (B'lgarska Akademiia na Naukite, Institut po Tekhnicheska Kibernetika i Robotika, Sofia, Bulgaria). *Problemi na Tekhnicheskata Kibernetika i Robotikata,* vol. 13, 1981, p. 18-26. 12 refs. In Bulgarian.

The paper describes the synthesis of a nonlinear mathematical model of the human operator, viewed as a dynamic plant in a closed-loop system. The approach is based on a functional representation with Volterra-Wiener series. After two-step identification, a second-order nonlinear model is synthesized, with a significantly wider range of sufficiency than in quasi-linear models. As an example, the procedure is applied to the simulation of a one-dimensional system for the control of dynamic objects. B.J.

**A82-26751 †** **The sensitivity of silent and spontaneously active cat cerebral cortex neurons to anoxia (Chuvstvitel'nost' 'molchashchikh' i fonovoaktivnykh neironov kory mozga koshki k anoksii).** M. O. Samoilov, D. G. Semenov, N. G. Iarantsev, and S. A. Evdokimov (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Jan. 1982, p. 3-8. 20 refs. In Russian.

Changes in the bioelectrical activity and redox state of both silent and spontaneously active neurons of the cat motor cortex with the onset of anoxia are investigated. Experiments involved the use of simultaneous morphophysiological and spectrophotometric studies of single pyramidal cells combined with in vivo microscopy under conditions of normal and interrupted oxygen supply. Neuron activation by a seizure discharge upon anoxia is observed to be accompanied by a well-defined, marked disturbance in the intracellular redox system, particularly in the silent cells. In contrast, the spontaneously active cells exhibited no noticeable increase in degree of reduction during the initial stages of the change in impulse activation associated with anoxia. A.L.W.

**A82-26752 †** **The state of alpha 1- and beta 1-adrenergic reactions upon cold acclimatization (Sostoianie alpha 1- i beta 1-adrenergicheskikh reaktsii pri akklimatsii k kholodu).** V. I. Sobolev and N. Dingamtar (Donetskii Gosudarstvennyi Universitet, Donetsk, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Jan. 1982, p. 34-38. 7 refs. In Russian.

Changes in adrenergic mechanisms not connected with thermogenesis which occur upon cold acclimatization are investigated in a study of the reactions mediated by the alpha 1- and beta 1-adrenergic adrenoreceptors in acclimatized rats. Whereas no differences are observed in the quantitative relation between alpha and beta adrenoreceptors in the vas deferens of acclimated and control male rats, acclimatization is observed to increase the affinity of the alpha receptors for nonadrenaline without increasing the maximum possible intensity of the adrenergic process. The prolonged effects of cold are also observed to produce an enhancement in cardiac adrenergic response with an elevation in cardiac affinity for the beta-agonist isadrine. A.L.W.

**A82-26753 †** **Some physiological mechanisms for the effects of the hypothalamus on erythron (O nekotorykh fiziologicheskikh mekhanizmakh vliianiia gipotalamusa na eritron).** O. I. Moiseeva, I. K. Klemina, and V. M. Alekseev (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Jan. 1982, p.39-44. 15 refs. In Russian.

Mechanisms of the influence of hypothalamic activity on circulating erythrocytes, erythrocyte precursors and erythrocyte production are studied in experiments involving the electrical stimulation of various hypothalamic structures of the rabbit. Stimulation of the anterior hypothalamus is found to produce a decrease in blood reticulocyte number and hematocrit, together with a redistribution of intrarenal blood flow indicative of reduced blood supply to the entire renal cortex. Posterior hypothalamic stimulation on the other hand leads to an increase in blood reticulocyte content, and an isolated increase in blood supply to the cortical nephron glomeruli. Changes in plasma erythropoietic activity are not observed. Data suggest hypothalamic effects on hemodynamics, particularly in the blood-forming and erythropoietin-producing organs, as a possible means for the influence of the hypothalamus on erythron. A.L.W.

**A82-26754 †** **Oxygen, carbon dioxide and the calcium control of relaxation mechanisms in cerebral artery smooth muscles (Kislorod, uglekislota i kal'tsievyi kontrol' mekhanizmov rasslableniia v gladkoi muskulature arterii golovnogo mozga).** A. L. Azin (Sverdlovskii Gosudarstvennyi Meditsinskii Institut, Sverdlovsk, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Jan. 1982, p. 59-63. 19 refs. In Russian.

The role of calcium ion control mechanisms in the relaxation of the smooth muscle cells of the cerebral arteries in response to oxygen insufficiency and excess carbon dioxide is investigated. Experiments were carried out on isolated strips of human internal carotid artery perfused with saline solution at oxygen tensions down to 20 mm Hg and CO2 tensions up to 50-60 mm Hg. Measurements of muscular tonus upon the addition of the inhibitors of cellular calcium exchange verapamyl and manganese ions reveal a complete suppression of the relaxation response to hypoxic and hypercapnic stimuli, while sodium nitrorusside partially maintained the response and intensified the reaction to CO2. Inhibition of the intracellular calcium pump by dichloroxdiphenyltrichloromethyl methane is also observed to reduce the relaxation effect. Results indicate that the responses to both stimuli induce, to different extents, the inhibition of Ca(+2) influx into smooth muscle cells and activate the intracellular calcium pump. A.L.W.

**A82-26755 †** **The effects of systemic arterial and venous pressures on blood volume in the cerebral vessels (Vliianie sistemnogo arterial'nogo i venoznogo davlenii na ob'em krovi v sosudakh golovnogo mozga).** G. I. Mchedlishvili, N. V. Sikharulidze, M. L. Itkis, and S. Januszewski (Akademiia Nauk Gruzinskoi SSR, Institut Fiziologii, Tiflis, Georgian SSR; Polish Academy of Sciences, Experimental and Clinical Medicine Centre, Warsaw, Poland). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Jan. 1982, p. 64-71. 17 refs. Molchanov (Sverdlovskii Gosudarstvennyi Meditsinskii Institut, Sverdlovsk, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 68, Jan. 1982, p. 79-83. 13 refs. In Russian.

**A82-26757 †** **Characteristics of lipid hydrolysis and absorption in rats under motor activity restriction (Osobennosti gidroliza i vsasyvaniia lipidov, u krys pri ogranichenii dvigatel'noi aktivnosti).** K. V. Smirnov, V. S. Nesterenko, I. L. Medkova, and L. V. Koroleva. *Fiziologicheskii Zhurnal SSSR*, vol. 68, Jan. 1982, p. 107-111. 9 refs. In Russian.

Changes in gastrointestinal lipolytic enzyme dynamics, the fundamental bile components involved in lipid transport and processes of fat absorption during hypokinesia are investigated in rats constrained to small volumes for various lengths of time. Analysis of bile composition, pancreatic lipase activities in the blood plasma, pancreas and small intestinal mucosa, monoglyceridlipase activities in the small intestinal mucosa and acid fatty acid absorption reveals the presence of a compensatory adaptive reorganization in cavity and membrane lipid hydrolysis and absorption after 20 and 30 days of motor restriction. Hypokinesia for a greater period of time (60 days) leads to a significant reduction in cavity lipid hydrolysis and the rate of triglyceride absorption. A.L.W.

**A82-26776** **The transfer of failure-detection skills between monitoring and controlling dynamic systems.** C. J. Kessel and C. D. Wickens (Illinois, University, Urbana, IL). *Human Factors*, vol. 24, Feb. 1982, p. 49-60. 21 refs. Contract No. F44620-76-C-0009.

Eighteen subjects either controlled or monitored the system dynamics of a two-dimensional pursuit display. Detection of changes in system dynamics was faster and more accurate when subjects controlled than when they monitored. The skill acquired by controlling transferred positively to the monitoring mode, producing enhanced detection performance. There was no transfer from the monitoring mode to the controlling mode. Monitors of automatic systems who have had prior manual experience rely upon different perceptual cues in making their detection response than do those who have had no experience. The training implications of these findings are discussed. (Author)

**A82-26777** **Pilot judgment - Training and evaluation.** R. S. Jensen (Ohio State University, Columbus, OH). *Human Factors*, vol. 24, Feb. 1982, p. 61-73. 23 refs. FAA-sponsored research.

The possibility of defining, teaching, and evaluating pilot judgment is considered, noting that faulty decision making comprises the cause of over half of all fatal air accidents. Judgment is a term covering a range of activities with spontaneous motor reflexes at one end and cognitive decisions at the other, differing mainly in time to reaction. A definition is offered which includes an information search of all alternatives and making an authoritative choice and subsequent action. Signal detection theory is suggested as a means to improve pilot judgment behavior by separating the stimulus into sensitivity and response modes. Instruction then becomes a period of observing correct decision-making actions by an expert to establish correct levels of sensitivity and response parameters. Methods of computer-assisted training and flight simulation are reviewed, and techniques for standardizing flight judgment evaluations are provided. M.S.K.

**A82-26798 †** **Bioengineering approach to the study of the oculomotor apparatus of the human visual analyzer (Biotekhnicheskii podkhod k issledovaniiu glazodvigatel'nogo apparata zritel'-**

**nogo analizatora cheloveka).** V. F. Ananin. *Problemy Bioniki,* no. 27, 1981, p. 88-93. 9 refs. In Russian.

The human oculomotor system is examined as a biological variant of a multiloop system, in which the regulation of each type of eye movement is accomplished in the frame of its own loop which is autonomous to some degree. Four such loops are postulated: voluntary, voluntary reflexive, involuntary, and tonic. The first three loops are formed by physical messages of nerve impulses, while the tonic loop is formed by a type of innervation. A diagram is presented illustrating the proposed regulation scheme for horizontal eye movements. B.J.

**A82-26799 † Model of the mechanism of the regulation of the human cardiovascular system. I - Concerning the heart-regulation mechanism (Model' mekhnaizma reguliatsii serdechno-sosudistoi sistemy cheloveka. I - O mekhanizme reguliatsii serdtsa).** V. F. Ananin. *Problemy Bioniki,* no. 27, 1981, p. 93-103. 7 refs. In Russian.

The human heart-regulation system is considered as a 10-loop automatic control system. The various loops are associated with intracardiac afferent systems, reflexogenic zones, the sympathetic nervous system, the parasympathetic system, and hormones of the hypothalamo-hypophysial complex. This regulation scheme is found to be suitable for EKG interpretation, where the QRS complex is associated with the ventricles. B.J.

**A82-26812 * Modulation of human sinus node function by systemic hypoxia.** D. L. Eckberg, H. Bastow, III, and A. E. Scruby (U.S. Veterans Administration Medical Center; Virginia, Medical College, Richmond, VA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 570-577. 44 refs. Research supported by the U.S. Veterans Administration and Iowa Lung Association; Grants No. NIH-HL-22546; No. NIH-HL-22296; No. NsG-9063.

The present study was conducted to determine whether bradycardia develops during systemic hypoxia in supine conscious human volunteers when respiratory frequency and tidal volume are maintained at constant levels. The obtained results suggest that mild hypoxia provokes cardioacceleration in humans, independent of changes of ventilation or baroreflex responsiveness. The earliest cardioacceleration is more prominent in the inspiratory than in the expiratory phase of respiration, and occurs with very small reductions of arterial oxygen saturation. Moderate systemic hypoxia dampens fluctuations of heart rate during the respiratory cycle. G.R.

**A82-26813 Effect of breathing patterns on the perceived magnitude of added loads to breathing.** K. J. Killian, E. J. M. Campbell (McMaster University, Hamilton, Ontario, Canada), and D. D. Bucens. *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 578-584. 30 refs. Research supported by the Medical Research Council of Canada.

Recently, studies using open magnitude scaling have shown that the perceived magnitude of externally added loads to breathing follows a predictable relationship in which the psychological magnitude grows as a power function of the added loads. The present investigation has the objective to elucidate the nature of load sensation, taking into account the effects of flow rate, tidal volume, pressure, and inspiratory duration on the perceived magnitude of a range of added resistive and elastic loads to breathing. It is found that the perceived magnitude of externally added loads to breathing is directly dependent on the inspiratory muscle force developed and its duration, and indirectly on the added load. G.R.

**A82-26814 Ventilatory adaptations to resistive loading during wakefulness and non-REM sleep.** C. Iber, A. Berssenbrugge, J. B. Skatrud, and J. A. Dempsey (Wisconsin, University; U.S. Veterans Administration Hospital, Madison, WI). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 607-614. 33 refs. Research sponsored by the U.S. Veterans Administration.

It is pointed out that the interpretation of timing and ventilatory responses to loading during anesthesia may be complicated by alterations in pulmonary and chest wall mechanics. The present study uses, therefore, sleep as a more physiological model for examining load-compensating mechanisms during reduced suprapontine input. The results of the study demonstrate that the ability to defend minute ventilation in response to sustained loading is reduced in sleep as compared to wakefulness and that arousal may be a ventilatory compensation to inspiratory resistance in sleep. G.R.

**A82-26815 Arterial CO2 response to low levels of inspired CO2 in awake beagle dogs.** P. Reischl and D. M. Stevert (California, University, Irvine, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 672-676. 27 refs. Research supported by the Electric Power Research Institute and Southern California Edison Co.

A study conducted by Reischl et al. (1980) has shown that 1% inspired CO2 with a partial pressure of 7 torr administered at sea level to awake beagle dogs results in an increased end-tidal CO2 pressure detectable with repeated measures of end-expiratory CO2. The present investigation extends the work on low-level CO2 inhalation to include arterial blood gases in the trained awake dog with an intact airway and an exteriorized carotid arterial loop. An examination is conducted of the steady-state arterial CO2 pressure during control and 1% CO2 inhalation periods, and results obtained by end-tidal measurements are compared. It is felt that the normal response in dogs to low levels of CO2 inhalation is hypercapnic. None of the various mechanisms which have been proposed to account for the isocapnic response to low levels of CO2 inhalation appears to play a significant role in the present study. G.R.

**A82-26816 * Recovery time course in contractile function of fast and slow skeletal muscle after hindlimb immobilization.** F. A. Witzmann, D. H. Kim, and R. H. Fitts (Marquette University, Milwaukee, WI). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 677-682. 30 refs. Grant No. NIH-AM-22037; Contract No. NAS9-15711.

The present study was undertaken to characterize the time course and extent of recovery in the isometric and isotonic contractile properties of fast and slow skeletal muscle following 6 wk of hindlimb immobilization. Female Sprague-Dawley rats were randomly assigned to an immobilized group or a control group. The results of the study show that fast and slow skeletal muscles possess the ability to completely recover normal contractile function following 6 wk of hindlimb immobilization. The rate of recovery is dependent on the fiber type composition of the affected muscle. G.R.

**A82-26817 Respiratory and inert gas exchange during high-frequency ventilation.** H. T. Robertson, R. L. Coffey, T. A. Standaert, and W. E. Truog (Washington, University, Seattle, WA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 683-689. 21 refs. Research supported by the University of Washington; Grant No. NIH-HL-06777.

An investigation was conducted to compare inert and respiratory gas exchange during conventional ventilation (CV) and high-frequency ventilation (HFV). The extensive intraregional gas movement which appears to occur during HFV may cause changes in gas exchange efficiency secondary to the properties of the inspired gas mixture. The investigation included, therefore, a study of the influence of alterations in carrier gas density on gas exchange during HFV. Thirteen mongrel dogs were used in the investigation. On the basis of the information obtained in the present study and in other studies of HFV, a number of proposals concerning pulmonary gas exchange are advanced. G.R.

**A82-26818 Thermoregulatory responses in the rat to exercise in the heat following prolonged heat exposure.** R. Francesconi, R. Hubbard, and M. Mager (U.S. Army, Research Institute of Environmental Medicine, Natick, MA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 734-738. 23 refs.

**A82-26819 Instrumentation simultaneously measuring carbon dioxide excretion and oxygen uptake in humans using titration methods.** C. M. Tsoi, D. B. Raemer, and D. R. Westenskow (Utah, University, Salt Lake City, UT). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Mar. 1982, p. 786-791. 10 refs. Grant No. NIH-GM-23095.

Continuous measurement of whole-body metabolism by indirect calorimetry is a useful procedure in intensive clinical medical care and physiological research. Attention is given to an instrument, the Nutrimeter, which combines a technique for oxygen uptake determination using the replenishment principle with the new technique of absorption-titration for carbon dioxide excretion measurement. Measurement of these two parameters combined with an estimate of N2 production makes it possible to conduct indirect calorimetric measurements simply, accurately, and dynamically. A description of the Nutrimeter is provided, and a theoretical analysis of the carbon dioxide excretion measurement technique is performed. G.R.

**A82-26865** **Athermal submillimeter-microwave biological effects.** L. S. Taylor (U.S. Navy, Naval Surface Weapons Center, Silver Spring; Maryland, University, College Park, MD). In: Lasers '80; Proceedings of the International Conference, New Orleans, LA, December 15-19, 1980. McLean, VA, STS Press, 1981, p. 133-136. 18 refs.

There is no argument about the dangers of exposure to high level microwave fields, that is, fields which cause energy absorption rates large compared to metabolic rates. Such fields produce effects, notably cataracts, due to simple heating, by absorption of energy in tissue water molecules. Exposure to high-level fields is relatively rare. In connection with widespread exposure to low-level fields, the possibility has been considered of athermal biological effects due to selective coherent excitation of biological molecules. Questions regarding coherent interactions are investigated, and attention is given to experimental evidence. It is found that athermal biological effects are conceptually possible. Experimental difficulties prevent, however, currently the demonstration of microwave phenomena at the molecular level. G.R.

**A82-26924 *** **Radiographic evidence of disuse osteoporosis in the monkey /M. nemestrina/.** D. R. Young (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA) and V. S. Schneider (Public Health Service Hospital, San Francisco, CA). *Calcified Tissue International,* vol. 33, 1981, p. 631-639. 15 refs.

Radiological techniques were utilized for monitoring progressive changes in compact bone in the tibia of monkeys during experimentally induced osteopenia. Bone mass loss in the tibia during restraint was evaluated from radiographs, from bone mineral analysis, and from images reconstructed from gamma ray computerized tomography. The losses during 6 months of restraint tended to occur predominantly in the proximal tibia and were characterized by subperiosteal bone loss, intracortical striations, and scalloped endosteal surfaces. Bone mineral content in the cross section of the tibia declined 17-21%. In 6 months of recovery, the mineral content of the proximal tibia remained depressed. (Author)

**A82-27096 #** **Orientation perception during aircraft coordinated turns.** J. Borah (Gulf and Western Applied Science Laboratories, Waltham, MA) and L. R. Young (MIT, Cambridge, MA). *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 20th, Orlando, FL, Jan. 11-14, 1982, Paper 82-0258.* 7 p. 11 refs. Contract No. F33615-78-C-0062.

Effective design of aircraft simulator devices requires an understanding of how aircraft motions are perceived. Perceptual responses previously have not been quantified for several roll maneuvers, including the coordinated turn. Psychophysical measurements of subjective roll and pitch orientation as well as roll angular velocity sensations, in the absence of visual cues, were made during coordinated turns and uncoordinated rolls on the Air Force Total-In-Flight Simulator (TIFS). The pattern of orientation illusions can be explained in terms of the biological sensory mechanisms, and is compared to the predictions of an optimal estimator model for human dynamic spatial orientation. (Author)

**A82-27222 *** **Simplicity in command and control systems - A human factors consideration.** R. L. Chafin (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: ITC/USA/'80; Proceedings of the International Telemetering Conference, San Diego, CA, October 14-16, 1980. Research Triangle Park, NC, Instrument Society of America, 1980, p. 519-525. 9 refs. Contract No. NAS7-100.

The importance of simplicity in the man computer interface (MCI) is stressed because of the effect it has on the system containing the MCI. Results are used from an MCI study at the Jet Propulsion Laboratory to find an area where the system MCIs can be simplified. The circumstances under which these simplifications are appropriate are listed. The concepts of cognitive simplicity and process simplicity are presented as design alternatives for the MCI. In addition, the concepts of understandability, operation, learnability, level of learning, and usability are presented as tools for the system designer. The use of these concepts in developing a systematic MCI design is discussed. C.R.

**A82-27503 †** **Scientific-technical and organizational problems of cosmonaut training (Nauchno-tekhnicheskie i organizatsionnye problemy podgotovki kosmonavtov).** G. T. Beregovoi. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 25-32. In Russian.

The development of cosmonaut training methods at the Gagarin Cosmonaut Training Center is reviewed. Particular consideration is given to flight and parachute training, technical training, and training on complex and specialized simulators. B.J.

**A82-27512 †** **Principal results of medical studies carried out during long-term manned flights in the Salyut 6-Soyuz-Progress orbital complex (Osnovnye rezul'taty meditsinskikh issledovanii, vypolnennykh vo vremia dlitel'nykh pilotiruemykh poletov na orbital'nom komplekse 'Saliut-6'-'Soiuz'-Progress').** O. G. Gazenko and A. D. Egorov. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 122-136. In Russian.

After a brief review of space medical studies performed over 19 years of manned flight, the paper considers medical studies performed on the Salyut 6-Soyuz-Progress complex during 1977-1979. Methods and results pertaining to the monitoring of cosmonaut health are given; studies of body weight, the cardiovascular system, the motor apparatus, the vestibular functions, the water-salt metabolism, the blood, and biochemical immunological and allergic reactions are examined. Attention is also given to prophylactic measures undertaken against the effects of weightlessness, and to the theory of the adaptation of the human body to space flight. B.J.

**A82-27513 †** **Mode of flight and a mathematical model of pilot activity relating to flight-vehicle control (Obraz poleta i matematicheskaia model' deiatel'nosti letchika po upravleniiu letatel'nym apparatom).** Iu. P. Dobrolenskii, V. A. Ponomarenko, and V. A. Tuvaev. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 137-140. In Russian.

The possibility of developing a model of pilot control activity that is superior to the transfer-function model is considered. It is shown that such a model can be constructed using the theories of optimal filtering and control and can account for the pilot's acquisition of data from a large number of sensors as well as the characteristic actions of the pilot when he simultaneously controls several control surfaces and the engine thrust. The model is shown to be highly effective despite its complexity. B.J.

**A82-27515 †** **New trends in the development of aerospace medical technology (Novye napravleniia razvitiia aviakosmicheskoi meditsinskoi tekhniki).** R. I. Utiamyshev. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 161-165. In Russian.

The current status of aerospace medical technology is briefly surveyed. Attention is given to such development trends as the use of microprocessing and macroprocessing, cryogenic equipment, and other advanced techniques. B.J.

**A82-27518 †** **Problems of the development of life support and safety assurance system for space crews (Nekotorye problemy sozdaniia sistem obespecheniia zhiznedeiatel'nosti i bezopasnosti ekipazhei letatel'nykh apparatov).** V. N. Pravetskii, N. M. Samsonov, R. I. Utiamyshev, and E. A. Kurmazenko. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 180-187. In Russian.

A systems approach is taken to the problem of developing life

support and safety assurance systems for manned space flights of various durations. It is shown that the choice of technological topology for a life support system and the choice of parameters of individual elements optimally effecting the conversion of technological flows can be made only on the basis of a complex examination of the system as a unified whole with allowance for its interaction with the crew, the environment, and other onboard systems. The use of mathematical modeling must be organically combined with other forms of modeling: physical, psychological, or their combinations.

**A82-27581 Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change.** T. Izuyama and Y. Akutsu (Tokyo, University, Tokyo, Japan). *Physical Society of Japan, Journal,* vol. 51, Jan. 1982, p. 50-58. 16 refs.

**A82-27726 † A bilocal model of a dissipative structure (Bilokal'naia model' dissipativnoi struktury).** A. D. Bazykin and A. I. Khibnik (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Vychislitel'nyi Tsentr, Pushchino, USSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 132-136. 7 refs. In Russian.

It is pointed out that the spatial arrangement of ecological systems often derives not so much from the heterogeneity of external nonbiogenic factors as from the mechanics governing the interactions between populations. Research that has been done on dissipative structures with the aid of mathematical and experimental models has shown that the existence of these structures in spatially distributed systems is often linked to self-oscillating patterns in the corresponding local systems. The dissipative structures usually appear when there are pronounced differences between the diffusion coefficients of the components. The relationship between the self-oscillating pattern in a local system and a dissipative structure in a spatially distributed system is investigated using a simple ecological model.

**A82-27727 † The interaction of alpha-actinin and tropomyosin with F-actin (Vzaimodeistvie alpha-aktinina i tropomiozina s F-aktinom).** L. A. Tskhovrebova, S. Iu. Khaitlina, N. S. Shelud'ko, and Z. A. Podlubnaia (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino; Akademiia Nauk, SSSR, Institut Biologii Moria, Vladivostok, USSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 20-25. 29 refs. In Russian.

Characteristics of the interaction of the contractile protein alpha-actinin with F-actin in the presence and absence of tropomyosin are studied in order to determine the localization of alpha-actinin. Interactions of alpha-actinin isolated from the skeletal muscle of a warm-blooded animal (rabbit) and from a cold-blooded animal (scallop) with F-actin and F-actin in the presence of tropomyosin at temperatures of 0 and 37 C were monitored by means of disk electrophoresis, viscosity measurements, and electron microscopy. The temperature dependence of the extent of association of alpha-actinin and tropomyosin with F-actin is found to be similar in both types of alpha-actinin, with an increase in temperature resulting in decreased affinity of alpha-actinin for F actin, and tropomyosin decreasing the amount of alpha-actinin bound at 37 C. At 0 C, actinin and tropomyosin interact independently with F-actin. Data indicate that tropomyosin and alpha-actinin have different binding sites on the F-actin molecule.

**A82-27728 † Changes in contractile protein composition and properties following space flight (Izmenenie sostava i svoistv sokratitel'nykh belkov posle kosmicheskogo poleta).** V. S. Oganov, S. A. Skuratova, L. M. Murashko, M. A. Shirvinskaia, T. Szilagyi, A. Szoor, M. Rapcsak, O. Takacs, S. S. Oganesian, and Zh. S. Davtian (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR; Debreceni Orvostudomanyi Egyetem, Debrecen; Szegedi Orvostudomanyi Egyetem, Szeged, Hungary; Institut Kardiologii, Yerevan, Armenian SSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 26-30. 19 refs. In Russian.

The possible role of changes in the composition and properties of skeletal muscle structural and regulatory proteins in producing the muscle atrophy and contractile changes observed following space flight is investigated in rats flown in the Cosmos 1129 biosatellite. The soleus, extensor digitorum longus, triceps and brachialis muscles were evaluated for isometric tension and analyzed for myofibrillar protein content, catalase activity and troponin-tropomyosin system components. In the post-flight period, muscle capacity to generate force is observed to decrease in all muscles but the extensor digitorum longus. Changes in the relative concentrations of the light chains of myosin and the troponin-tropomyosin system composition are also observed, along with an increase in catalase activity. Results are indicative of a transformation of fiber phenotypes in antigravitational muscles under space flight conditions.
A.L.W.

**A82-27729 † The magnetic susceptibility of rhodopsin (Magnitnaia vospriimchivost' rodopsina).** M. M. Vilenchik (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 31-36. 31 refs. In Russian.

The cooperative interaction with a magnetic field of rhodopsin molecules aligned parallel to each other in the photoreceptor membrane is considered. The anisotropy of the magnetic susceptibility of rhodopsin is calculated, and it is shown that due to this anisotropy and the ordering of rhodopsin molecules in the photoreceptor membrane, the majority of rod outer segments will become oriented along the lines of force of a magnetic field of intensity 80 Oe. Observations of a low velocity for the orientation suggest that it is limited by kinetic constraints. The magnetic effect may be used as the basis for magnetic chemotherapy, in which a magnetic field is used to direct microspheres filled with a bioactive substance, for the inhibition of the growth of malignant tumors, and as an explanation of biological navigation mechanisms.

**A82-27730 † Antenna form of photosystem-2 chlorophyll in chloroplasts (Antennaia forma khlorofilla fotosistemy II v khloroplastakh).** V. G. Ladygin and K. Ia. Bil' (Akademiia Nauk SSSR, Institut Fotosinteza, Pushchino, USSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 37-41. 15 refs. In Russian.

**A82-27731 † Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress (Deistvie aeroinov na sootnoshenie priamogo i obratnogo perenosa elektronov v mitokhondriiakh pri stresse).** M. N. Kondrashova, I. B. Guzar, M. Brechkova, E. B. Okon, and E. V. Grigorenko (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 76-80. 6 refs. In Russian.

Changes in direct (respiration) and reverse (from succinic acid to pyridin nucleotides) energy-dependent electron transport in rat liver mitochondria under stress are found to be mutually opposing. An increase in respiration due to added and, in particular, endogeneous succinic acid is observed, with a corresponding acceleration in phosphorylation. This is accompanied by a weakening of reverse electron transport. Such electron flux redistribution does not involve any coupling loss and represents a physiological mechanism for controlling the ratio between external mitochondria function (ATP synthesis and ion transport) realized by direct electron transport and regenerative synthesis processes involving protons supplied by reverse electron transport. Treatment with air ions after stress reduces the changes described by limiting direct electron transport and stimulating reduction processes associated with reverse electron transport.

**A82-27732 † Study of the viscosity of free and protein-bound membrane lipids (Izuchenie viazkosti svobodnykh i sviazannykh s belkom lipidov v membranakh).** I. S. Litvinov and V. V. Obraztsov (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 81-86. 16 refs. In Russian.

Temperature effects on the mobility of free and protein-bound lipids in a biological membrane are measured in a study of a possible mechanism for the regulation of membrane-bound enzymes. Lipid viscosity was determined from measurements of pyrene fluorescence intensity upon inductive-resonance energy transfer from tryptophan residues in the membrane proteins of the sarcoplasmic reticulum of rabbit skeletal muscle. Phase transitions in the lipid bilayer and in lipids bound to membrane proteins are found to occur within the same temperature intervals. In the temperature range 10-35 C, the viscosity of lipids in the immediate vicinity of proteins is observed to be greater than that of free lipids, but to become equal to that of the latter at temperatures of 36-39 C. Results suggest the importance of membrane conditions for the optimal functioning of membrane-bound enzymes such as Ca(2+)-ATPase. A.L.W.

**A82-27733** † **Localization of adeninnucleotides in striated fibers of skeletal muscles (O lokalizatsii adeninnukleotidov v poperechnopolosatykh voloknakh skeletnykh myshts).** L. K. **A82-27734** † **The possible role of hydrogen bonds in the mechanism of muscular contraction (Vozmozhnaia rol' vodorodnykh sviazei v mekhanizme myshechnogo sokrashcheniia).** K. B. Tolpygo (Akademiia Nauk Ukrainskoi SSR, Fiziko-Tekhnicheskii Institut, Donetsk, Ukrainian SSR). *Biofizika*, vol. 27, Jan.-Feb. 1982, p. 95-98. 11 refs. In Russian.

A model is proposed for the process of energy transfer from ATP to the mechanical work of muscular contraction involving the creation of hydrogen bonds. Based on the observation that the activation energy of hydrogen bonds is comparable with the energy released upon the hydrolysis of ATP, the model states that this energy released goes into the excitation of hydrogen bonds in the actin-myosin system. Such bonds would be strong and far-acting enough to cause the mutual sliding of actin and myosin fibers, thus giving rise to macroscopic muscular contraction. The model allows the evaluation of muscle effort and its dependence on contraction rate and muscle efficiency. A.L.W.

Iaguzhinskii (Akademiia Nauk SSSR, Fizicheskii Institut; Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Biofizika*, vol. 27, Jan.-Feb. 1982, p. 114-119. 15 refs. In Russian.

A physical model is developed for the coupling of the rapid electron tunneling reaction with the slow process of proton transport from water to the membrane as the initial stage of energy transfer from electron to proton in oxidative phosphorylation. The model is based on the proposal of weak interactions providing the primary electron trap in which an electron would lose an insignificant amount of energy as the time spent in the trap becomes comparable with the proton transport time. The energized proton formed in the protein membrane will thus have sufficient energy for phosphorylation. It is noted that the model applies equally well to chloroplasts and mitochondria. A.L.W.

The critical selection of a model of morphogenesis or embryogenesis is examined in relation to the properties of corresponding stable dissipative structures. Differences between the stable dissipative structures corresponding to the Turing, Girer, and Meinhard models in one-, two-, and three-dimensional cases are determined. The obtained pattern of dissipative-structure stability is used to investigate organism-shape changes corresponding to various models of morphogenesis in relation to external stimuli. B.J.

S. Larin, N. V. Samosudova, S. O. Enenko, and V. E. Shungskaia (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika*, vol. 27, Jan.-Feb. 1982, p. 159-162. 7 refs. In Russian.

The determining role of membranes in the formation of the myofibrillar system at different stages of chick-embryo development (on the 8th, 12th, and 15th day) was investigated. At the early stages the myofibrillar assembly depends mainly on the plasma membrane (myofibrils are located beneath the sarcolemma), while later it depends on the developing sarcoplasmic reticulum and T-system. It is shown that transverse tubules invaginating from the plasma membrane are the framework for the forming myofibrillar system, and thin filaments are attached to the transverse tubules at sites of future Z-lines. Destruction of the membrane elements causes disorganization of myofibrillar contractile material. B.J.

**A82-27744** † **Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes (Vliianie vysokochastotnogo elektromagnitnogo polia na transport tetrafenilborata cherez bisloinye lipidnye membrany).** S. I. Alekseev, V. V. Tiazhelov, L. Kh. Faizova, and V. V. Chertishchev (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika*, vol. 27, Jan.-Feb. 1982, p. 162, 163. 8 refs. In Russian.

The effects of a microwave frequency electromagnetic field on tetraphenyl borate transport through a lipid bilayer membrane are studied taking into account concentrations of the indifferent electrolyte. Experiments were performed using a lecithin membrane with a 10% concentration of cholesterol in an electrolyte solution 0.1-1.6 M in NaCl and 0.00001 M in tetraphenyl borate, irradiated at 0.9 GHz. Increases in membrane saturation current indicative of tetraphenyl borate transport are found upon the activation of the microwave field, with the increase in transport proportional to the NaCl concentration of the solution. Results are attributed to local microwave heating of the electrolyte layers near the membrane.

Okon (Akademiia Nauk SSSR, Institut Biologicheskoi Fiziki, Pushchino, USSR). *Biofizika,* vol. 27, Jan.-Feb. 1982, p. 170-178. 65 refs. In Russian.

The use of NMR techniques to obtain two-dimensional cross-sectional images of biological structures for applications in medical diagnosis is discussed. The fundamental principles of NMR imagery, which detects variations in nuclear density, mobility and magnetic environment, are reviewed, and selected methods currently in use for obtaining proton NMR images reflecting the distribution of free water are examined, including the sensitive points methods, projective image reconstruction, selective excitation, the multiplanar and planar methods, linear scanning, and the echo-planar method. Advantages of specificity, noninvasiveness and the avoidance of ionizing radiation of NMR imagery with respect to other methods of diagnostic imagery are noted, and the potentials of nuclear imagery based on P-31 and F-19 are considered. Evidence for the role of pheophytin a, a magnesium-less derivative of chlorophyll, as the primary acceptor of electrons from chlorophyll in the photosystem II reaction centers of green plants is reviewed. Experiments have revealed the reversible photoreduction of pheophytin a in photosystem II preparations in which the presumed primary electron acceptor, designated Q, was reduced in the dark, indicating the function of pheophytin as the primary electron acceptor between the primary electron donor and Q. Further studies of chlorophyll luminescence, the photofilling of long-lived intermediates, pheophytin interactions with reaction system components, oxidation-reduction potentials and charge separation and stabilization in photosystem II reaction centers have demonstrated similarities between the characteristics of green plant photosystem II reaction centers and the reaction centers of purple photosynthetic bacteria. The spatial organization of microvessels in skeletal muscle is discussed, and the vascularization of red and white muscle fibers is compared. Data from in vivo microscopy of the spinotrapezius and quadriceps muscles of albino rats is presented which supports the principle of the polymeric homonomic organization of the muscle microcirculatory bed, with the intramuscular angioarchitectonics governed by functional units of the microcirculatory bed designated myoangions. Calculations of capillary bed capacity and reserve potential in white and red muscle fibers based on injection and staining studies show that in the muscle at rest, 40% of the capillaries of the red muscle fibers and 30% of the white muscle fiber capillaries function at any one time. The distribution of the functioning capillaries is also found to ensure optimal muscle metabolism and transorganic circulation reliability. A.L.W.

Biomicroscopy was employed to investigate microcirculation changes in the mesentery of rats exposed to single or repeated stressors (immobilization or electric stimulation) after adrenalectomy or the administration of adrenoblockers. It is found that catecholamines released from the adrenergic nerve terminals play an important role in microcirculation changes, including the formation of erythrocyte aggregates. These same catecholamines also play an active role in the development of adaptation responses to the repeated stressor effect in the microcirculation system. B.J.

A method for measuring the linear and volumetric rate of hepatic portal blood flow in rats is described. The method is based on the application of miniature ultrasonic transducers, contact biomicroscopy of the terminal microvessels of the intestine and liver, and the measurement of the systemic arterial blood pressure. B.J.

**A82-27761 † Mechanism for the antihypoxic effects of depakin (K mekhanizmu antigipoksicheskogo effekta depakina).** R. U. Ostrovskaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Feb. 1962, p. 42-44. 15 refs. In Russian.

The effects of the antiepileptic depakin (valproate) and other GABA-ergic substances on hypoxia tolerance are investigated. Experiments involved the measurement of survival, cerebral and cardiac lactate and pyruvate levels and the hypoxic lactate excess in mice under conditions of normobaric hypoxic hypoxia, and electrocardiogram changes in rats under hypoxic hypoxia, upon the administration of depakin, the alpha-ketoglutarato GABA transferase inhibitors aminooxyacetic and aminooxybutyric acids and hydroxylamine and the succinic semialdehyde dehydrogenase inhibitor diphenylhydantoin. A dose-dependent effect of depakin in increasing lifetimes, delaying the appearance of rhythm disturbances and preventing lactate accumulation is obtained. The magnitude of the response is similar to that to hydroxybutyrate and succinic semialdehyde, and significantly exceeds that to piracetam, while the succinic semialdehyde dehydrogenase inhibitors elicited no response. Results suggest that the inhibition of succinic semialdehyde dehydrogenase accompanied by the enhanced reduction of succinic semialdehyde plays an important role in the mechanism of action of depakin.

**A82-27762 † Phosphorylating oxidation during changes in physiological condition (Fosforiliruiushchee okislenie pri izmeneniiakh funktsional'nogo sostoianiia organizma).** T. A. Allik (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Fiziko-Tekhnicheskikh i Radiotekhnicheskikh Izmerenii, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Feb. 1982, p. 28-30. 14 refs. In Russian.

Changes in the rate of phosphorylating (mitochondrial) and free (microsomal) oxidation with physiological condition ranging from the optimal norm to profound pathology are investigated. Measurements of total and amythal-sensitive respiration were made in rats and mice in physically trained and normal conditions, prepathological conditions of fatigue or early neurosis, pathological conditions of pronounced multiple aseptic inflammation or pronounced neurosis, and prelethal forms of the above pathologies. The trained condition is found to be characterized by a reduced oxygen demand with respect to the norm, which is attributed to a decrease in phosphorylating oxidation. In the prepathological condition, oxygen demand increases, again due to the phosphorylating component, while in pronounced pathology of any etiology phosphorylating oxidation rises further and free oxidation declines sharply. The prelethal condition is characterized by a catastrophic increase in phosphorylating oxidation and a significant increase in total respiration despite a severe reduction in free respiration. A.L.W.

**A82-27765 † Effects of acoustic stress on rat sensorimotor cortex morphology (Vliianie akusticheskogo stressa na morfologiiu sensomotornoi kory krys).** N. I. Artiukhina and I. P. Levshina (Akademiia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Jan. 1982, p. 98-100. 10 refs. In Russian.

Changes in the structural and ultrastructural characteristics of the rat sensorimotor cortex upon prolonged exposure to high noise levels are examined and compared with corresponding changes in the auditory cortex. Animals were exposed for 14 hours a day to frequencies between 250 and 3500 Hz at an intensity 80 to 90 dB higher than the human audibility threshold for up to 21 days. After 7 days of exposure, focal percapillary hemorrhages are found in the sensorimotor cortex, with microglial cells and fibrous astrocytes accumulated around the site of the hemorrhages. Following longer exposures, fresh hemorrhages are not apparent, and signs of chromatolysis are evident in the neurons and neuroglia. Increases in the numbers of lysosomes containing pigmented granules and the accumulation of a turbid substance in the rough endoplasmic reticulum are also observed. The observations, which represent a more diffuse form of the changes seen in the auditory cortex, may account for the observed disturbances in motor function under conditions of acoustic stress. A.L.W.

**A82-27766 † A study of cerebral microvessels by means of automatic image analysis (Izluchenie mikrososudov mozga metodom avtomaticheskogo analiza izobrazhenii).** V. S. Shinkarenko and V. N. Larina (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Jan. 1982, p. 3-5. 6 refs. In Russian.

The technique of automatic image analysis is evaluated as a potential means for the study of the quantitative characteristics of the structure of the cerebral microvascular network, a potential indicator of pathological changes. Analysis of histological sections of dog brain with the vascular network filled with ink were performed with a texture analysis system. Measurements of total vascular fragment area, length and number, the area and lengths of fragments of a given diameter, measurement field area, specific vascular length per tissue volume and mean vessel diameter obtained for various areas of the brain by automatic analysis are found to be in general agreement with those obtained by hand, however require considerably less time and manpower than manual methods. In Russian.

The daily rhythms of persons working three shifts in a factory are investigated. It is shown that when cosinor analysis is used to study the daily rhythm it is necessary to take into account not only the circadian rhythm but also the infracircadian rhythm (less than 20 hours). It is suggested that criteria of the optimal organization of shift work be sought on the basis of relationships between circadian and infracircadian rhythms. B.J.

**A82-27772 †** **Adaptive changes in the rat hypophysical-adrenal system upon altitude hypoxia (Adaptivnye izmeneniia gipofizarno-nadpochechnikovio sistemy krys na vysokogornuiu gipoksiiu).** D. Zakirov and E. A. Iangalycheva (Akademiia Nauk Kirgizskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Kirgiz SSR). *Akademiia Nauk Kirgizskoi SSR, Izvestiia,* no. 6, 1981, p. 46-51. 20 refs. In Russian.

A combined biochemical and morphological study is presented of the reactions of the hypophysical-adrenal system during adaptation to altitude hypoxia in rats exposed for various lengths of time to an altitude of 3200 m. Measurements after up to 20 days of exposure reveal increases in the levels of corticosterone and catecholamines in the blood and adrenal glands, indicative of a stress response, followed by decreases in all levels with the exception of blood noradrenalin. A short-term decline in hypophysical ACTH and hypothalamic corticosterone-stimulating activity, followed by an increase and subsequent decrease is also observed. Histological data reveal a significant widening in vascular diameters and increase in nuclear areas in the adrenal cortex and neurohypophysis, which are correlated with variations in alkaline phosphatase and ATPase contents, respectively. Results suggest the enhanced secretion of endogenous vasopressin in the later stages of adaptation accompanied by a decrease in the antidiuretic activity of the hypothalamus. A.L.W.

In Russian.

Previous studies have implicated muscle glycogen content as the limiting factor in determining human submaximal aerobic work capacity. The present paper presents a study of the effects of an increase in carbohydrate resources on work capacity during the performance of near-maximal aerobic exercise (80-90% maximal oxygen consumption). Male subjects performed bicycle ergometer exercise at levels of 70%, 80% and 90% of maximal to exhaustion while following a normal mixed dietary regimen, and after a regimen consisting of carbohydrate-poor foods immediately after the exercise period, then three days of carbohydrate-rich foods (carbohydrate loading). The carbohydrate loading regime is found to increase aerobic work capacity at all levels tested, with the amount of increase inversely related to work power. An increase in the total quantity of carbohydrate oxidized during exercise without change in the mean rate of carbohydrate consumption is also observed. A.L.W.

I. Il'nitskii (Ternopol'skii Meditsinskii Institut, Ternopol, Ukrainian SSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Jan. 1982, p. 38, 39. In Russian.

The dependence of the cardiac volume of young athletes of different specializations on their level of training during various phases of the yearly training cycle is investigated. Measurements of cardiac volume were performed by means of biplanar teleradiography during the first and second stages of the preparatory period, the base period and the transitional period in long- and middle-distance runners, short-distance runners and wrestlers aged 13 to 16. Both absolute and relative (with respect to body weight) cardiac volumes are observed to vary in accordance with the stage and type of training, being greater in the endurance-trained athletes. Changes in absolute heart volume are, however, noted to become less marked with age. A.L.W.

A method is proposed for the determination of overall physical endurance based in the measurement of a number of cardiorespiratory parameters at rest and during exercise. The parameters employed, respiratory minute volume, oxygen uptake, and the rheographic index, were chosen so as to allow the evaluation of the three fundamental stages of oxygen supply: pulmonary uptake, absorption in the blood, and transport to the tissues. A physical endurance coefficient, defined as a product of the ratios of these parameters recorded at rest and during exercise, allows a distinction to be made between trained and untrained individuals, and among individuals at different levels of training for purposes of monitoring and selection. The state of the kallikrein-kinin system (KKS) and the effect of the antikinin agent parmidin and the protease inhibitor trasylol on microcirculation and vascular permeability were studied in the case of immobilization stress in rats. The blood KKS was found to be activated after immobilization for 1, 3, and 24 hours. Parmidin and trasylol improved microcirculation in the mesentery in the case of 1 hour of immobilization and had no appreciable effect on the mesenteric blood flow in the case of 24 hours of immobilization. These agents reduced disorders of vascular permeability caused by immobilization of 1 or 3 hours; in the case of immobilization for 24 hours, only trasylol was effective. B.J.

Malzack and Wall's (1965) gate control theory is examined, and it is shown that, according to this theory, not only the segmentary but also the supraspinal pain-suppression mechanisms are activated exclusively by low-threshold primary afferents. It is argued that this theory has certain defects which cannot be overcome without a radical reworking of the theory. Instead, another theory is proposed, which involves the formation of a 'pain flow' in the spinal cord and the transmission of this flow to the supraspinal structures. B.J.

A clinical study involving the use of bicycle ergometry in the diagnosis of cardialgia of different etiologies is presented. The study involved 120 men aged 30 to 50 years, 90 of whom had expressed complaints of pain in the cardiac region. Ergometric testing with concurrent recording of the EKG revealed significant differences between the work capacity, maximum oxygen uptake, oxygen energy equivalent and EKG responses of the control group and the work capacity of all patients, and the maximal oxygen uptake, oxygen energy equivalent and EKG response of patients diagnosed as having chronic coronary insufficiency. Results indicate the effectiveness of ergometry in distinguishing between chronic coronary insufficiency and functional heart diseases in difficult clinical cases.

In Russian.

Experience in the medical rehabilitation of patients with vibration sickness by the use of a constant magnetic field is reported. Magnetotherapy at a field intensity of 150-200 Oe was used in combination with vitamin therapy in the treatment of 50 miners with stage I vibration sickness, predominantly exhibiting autonomic neuritis, and results of treatment were compared with that of conventional vitamin and sympatolytic, spasmolytic or ganglioblocker treatment of patient controls. As with conventional therapies, the magnetic field is observed to have a positive action on certain nervous system functions, with particularly marked effects on pain, tendon and peristaltic reflexes, peripheral vascular reactivity and rheographic parameters, as well as catecholamine excretion.

Anokhin's theory of functional systems is applied to the objective evaluation of the functional state of persons performing monotonous work on a conveyer. Somatovegetative parameters characterizing the attainment of intermediate and end results of work activity were investigated for 72 female workers 18 to 28 years old engaged in the assembly and control of electrooptical systems. In the course of the establishment and sequencing of behavioral acts, the significance of the intermediate results was found to decrease, while that of the end result was found to increase, reflecting the degree to which the work activity was automated and the reduction of the time necessary to achieve the system result. The synchronization between the achievement of intermediate results and the variability of this synchronization between the achievement of intermediate results and the observed somatovegetative alterations and the variability of this synchronization reflected the extent of nervous and emotional tension. B.J.

Experimental results are presented on the time variations of cardiac activity and morphological abnormalities in the myocardium of rabbits resulting from daily stimulation for two weeks of negative emotiogenic zones (avoidance behavior) or from alternate stimulation of negative and positive zones (self-stimulation) of the hypothalamus. Particular attention is given to the occurrence of self-stimulation in the presence of subthreshold stimulation of negative emotiogenic hypothalamic zones and after their subsequent exclusion. It is found that there are no simple reciprocal relationships between mechanisms of positive and negative emotional responses. It is concluded that under certain conditions positive emotional states may play the role of an anti-stress factor. B.J.

In Russian.

Consideration is given to the electromagnetic fields found in the vicinity of meteorological radar stations and the significance of these fields to human health. The technical and operating characteristics of the three major types of meteorological radar, intended for use in determining cloud cover, conditions in the free atmosphere and the characteristics of thunderclouds and hail formations, are reviewed, and results of electromagnetic field surveys are presented which indicate meteorological radars to be significant sources of time- and spatially-varying microwave fields. Results of experiments in which rats were exposed to flux densities characteristic of those near meteorological radars (5 to 115 microwatt/sq cm) are indicated which have demonstrated significant changes in sensitivity to electrocutaneous stimulation, static work capacity, conditioned reflex activity as well as enzyme activities and metabolism following chronic exposure at the higher levels. Results thus demonstrate the need for the regulation of radar fields and the development of differentiated population norms. A.L.W.

In Russian.

A microdosimetric analysis of received radiation levels has been undertaken in an attempt to account for the observed variability of biological effects in space experiments. Experiments involved the irradiation of T4B bacteriophage with secondary radiation generated by the impact of 70-GeV protons with a target. The survival rates of the various phage ampules are found to follow a log-normal distribution. Results are consistent with a model taking into account spatial fluctuations in local energy absorption resulting from the short interaction lengths of the products of hadronic interactions. A.L.W.

**A82-27811 † The dynamics of rat bone marrow CFUc content during prolonged fractionated irradiation (Dinamika KOEk kostnogo mozga krys v protsesse dlitel'nogo fraktsionirovannogo oblucheniia).** V. M. Luzanov and K. N. Muksinova. *Radiobiologiia,* vol. 22, Jan.-Feb. 1982, p. 44-48. 15 refs. In Russian.

Changes in the levels of granulocyte precursor cells in the bone marrow of rats during prolonged exposure to ionizing radiation are studied. Numbers of colony-forming units in culture (CFUc) in the rat bone marrow were determined by the agar colony method along with myelocaryocyte and leukocyte numbers in rat bone marrow following daily exposure to 0.48 gram-roentgen dose of gamma radiation for up to 60 days. A 15% reduction in femoral CFUc levels is evident following the first irradiation with subsequent doses producing after 5 days a level 12% of that in intact rats. A less marked decrease in the levels of nucleated cells is also found in the first five days of irradiation. Following subsequent irradiation, however, CFUc numbers increased slightly to a final level 74% less than the control, and nucleated cell numbers continued to decline. Leukocyte levels remained at nearly the control values during the entire irradiation period. The decreases in precursor cells are thus concluded to be indicative of disturbances in granulocytopoiesis caused by radiation. A.L.W.

**A82-27812** 1 **Conductors of the airways (Dirizhery vozdushnykh trass).** N. Zykov. *Nauka i Zhizn',* Dec. 1981, p. 58, 59. In Russian.

The profession of air traffic controllers is discussed. The importance of air traffic control in the crowded airspace of today is pointed out, and the duties of the controller are indicated. Attention is also given to the qualifications and training required of an air traffic controller in the Soviet Union. A.L.W.

**A82-28025** **Sleep loss, recovery sleep, and military performance.** D. R. Haslam (Army Personnel Research Establishment, Farnborough, Hants., England). *Ergonomics,* vol. 25, Feb. 1982, p. 163-178. 35 refs.

The results of a sleep-loss followed by rest cycle experiment involving military exercises are reported. The trials comprised 90 hours of wakefulness during tactical field exercises, followed by six days of permitted 4 hr sleep, followed by a 30 hr rest period. Ten infantrymen served as subjects, and were kept constantly occupied during the wakefulness portion of the experiment. Measurements were performed on grouping accuracy during rifle-shooting episodes, and 20 min logical reasoning and 10 min decoding tests were given at 1300, 0100, and 0545 hr every day; EEG recordings were constantly monitored through portable instruments. A decrement of 20% was observed in the grouping accuracy, with recovery occurring on day six and continuing. Results for the logical reasoning tests were higher at 0100 than 1300, although overall scores declined, faster for the decoding test. Any amount of sleep improved the reasoning test performance. Finally, alpha-state increased throughout the sleep-deprived periods, and EEG recordings indicated that sleep deprivation produced traces definable as a need state. M.S.K.

**A82-28094** **How life began.** P. Cloud (Baas-Becking Geobiological Laboratory, Canberra, Australia). *Nature,* vol. 296, Mar. 18, 1982, p. 198, 199.

The discussions that took place at an international symposium in Jindabyne, New South Wales, in December 1981 are summarized. It was pointed out that molecules available as building blocks of life came from (1) chemical evolution in the dark nebulae of the Galaxy; (2) chemical evolution in the presolar nebula followed by the arrival on earth of its products in planetesimal debris; and (3) chemical evolution in the earth's primitive atmosphere and hydrosphere. Considerable attention was given to the origin of replication, with opinion divided on which came first: RNA, DNA, or sugars. It was contended that replication would have been favored by day-to-night temperature variations, and it was shown why chirality may not pose as much of a problem as once supposed. Attention was also given to the earliest known forms of life and to their probable biochemical evolution. C.R.

**A82-28099** **/H-3/-noradrenaline release potentiated in a clonal nerve cell line by low-intensity pulsed magnetic fields.** R. Dixey (St. Bartholomew's Hospital, London, England) and G. Rein (Queen Charlotte's Maternity Hospital, London, England). *Nature,* vol. 296, Mar. 18, 1982, p. 253-256. 25 refs.

**A82-28113** * **Symbiosis in cell evolution: Life and its environment on the early earth.** L. Margulis (Boston University, Boston, MA). Research supported by NASA, Boston University, and California Institute of Technology; Grant No. NGR-22-004-025. San Francisco, W. H. Freeman and Co., 1981. 438 p. 1061 refs. $15.

The book treats cell evolution from the viewpoint of the serial endosymbiosis theory of the origin of organelles. Following a brief outline of the symbiotic theory, which holds that eukaryotes evolved by the association of free-living bacteria with a host prokaryote, the diversity of life is considered, and five kingdoms of organisms are distinguished: the prokaryotic Monera and the eukaryotic Protoctista, Animalia, Fungi and Plantae. Symbiotic and traditional direct filiation theories of cell evolution are compared. Recent observations of cell structure and biochemistry are reviewed in relation to early cell evolution, with attention given to the geological context for the origin of eukaryotic cells, the origin of major bacterial anaerobic pathways, the relationship between aerobic metabolism and atmospheric oxygen, criteria for distinguishing symbiotic organelles from those that originated by differentiation, and the major classes of eukaryotic organelles: mitochondria, cilia, microtubules, the mitotic and meiotic apparatuses, and pastids. Cell evolution during the Phanerozoic is also discussed with emphasis on the effects of life on the biosphere. A.L.W.

**A82-28114** **Multiplication noise in the human visual system at threshold. I - Quantum fluctuations and minimum detectable energy.** M. C. Teich, P. R. Prucnal, G. Vannucci, M. E. Breton, and W. J. McGill (Columbia University, New York, NY). *Optical Society of America, Journal,* vol. 72, Apr. 1982, p. 419-431. 84 refs. Research supported by the National Institutes of Health and NSF.

A series of frequency-of-seeing experiments, similar to those performed by Hecht et al. (1942), was conducted. An Ar(+) laser operated at 514.5 nm was employed as the source of light in the experiments. The present experiments differed from those conducted by Hecht et al. in that high false-report rates were encouraged in certain blocks of trials. A quantitative relationship between the average number of photons required at the cornea, for 60% frequency of seeing, and the false-positive rate demonstrates that sensitivity and reliability are traded against each other over a broad range. A neural-counting model for threshold detection is developed. G.R.

**A82-28115** **Motion and vision. IV - Isotropic and anisotropic spatial responses.** D. H. Kelly (SRI International, Menlo Park, CA). *Optical Society of America, Journal,* vol. 72, Apr. 1982, p. 432-439. 17 refs. Grant No. NIH-EY-01128.

The preceding investigations in this series have dealt with the visual effects of stabilizing the retinal image of a vertical sine-wave grating that either was stationary or was moving at a constant horizontal velocity determined by the experimenter. The present investigation is concerned with a more general class of stimulus patterns which cannot be described as functions of any single Cartesian coordinate. The stabilized thresholds for a number of multicomponent patterns were measured and compared with the corresponding single-component, stabilized thresholds. It is found that, unlike the results with unstabilized patterns, the multicomponent results with stabilized, stationary patterns can be predicted by linear summation of the component contrasts. That is, when more than one component is present, the threshold depends mainly on the total contrast of the stimulus, not on the contrasts of the individual components. G.R.

**A82-28116** **Fading of stabilized retinal images.** U. Tulunay-Keesey (Wisconsin, University, Madison, WI). *Optical Society of America, Journal,* vol. 72, Apr. 1982, p. 440-447. 19 refs. Grants No. NIH-EY-00308; No. NIH-EY-02483.

It is well known that targets whose images are stabilized on the retina by optical means, as well as afterimages that are naturally stabilized on the retina, fade and eventually disappear. Comparative data are presented on the rate of disappearance of stabilized images and afterimages as a function of contrast and spatial frequency. The main finding is that they disappear in a similar fashion only when target contrast is low. (Author)

**A82-28117** **Finding the illuminant direction.** A. P. Pentland (MIT, Cambridge, MA). *Optical Society of America, Journal,* vol. 72, Apr. 1982, p. 448-455. 15 refs.

Shading is important for estimation of three-dimensional shape from the two-dimensional image, for instance, for distinguishing between the smooth occluding contour generated by the edge of a sphere and the shape occluding contour generated by the edge of a disk. In order to use shading information to solve such problems, one must know the illuminant direction L. This is because variations in image intensity (shading) are caused by changes in surface orientation relative to the illuminant. Each illuminant direction L has a unique effect on the distribution of changes in image intensity dI, potentially permitting the estimation of L. However, because dI is a function of both L and the surface curvature, L can be estimated from the image only by making an assumption about the imaged surface curvature. One assumption that is sufficient to disentangle L and surface curvature is that changes in surface orientation are isotropically distributed. This condition is true of images of convex objects bounded by a smooth occluding contour and is true on average over all scenes. Estimates made by using this assumption agree with estimates of illuminant direction given by human subjects for images of natural objects, even when both are objectively wrong. Further, there is a significant correlation between the variance of these estimates and the variance of the human subjects' estimates. (Author)

**A82-28123** **Comparison of flicker-photometric and flicker-threshold spectral sensitivities while the eye is adapted to colored backgrounds.** A. Eisner (Chicago, University, Chicago, IL). *Optical Society of America, Journal,* vol. 72, Apr. 1982, p. 517, 518. 8 refs. Grant No. NIH-EY-01711.

Eisner and MacLeod (1981) have reported that visual sensitivity as measured with flicker photometry on appropriately colored backgrounds is determined predominantly by the response from only one type of cone. The present investigation is concerned with the repetition of the chromatic-adaptation experiments in a modified form. This time the detection of flicker of a fully modulated test is used as a criterion in place of the flicker-photometric null or minimization of flicker. Since flicker thresholds provide an absolute measure of sensitivity and are amenable to a threshold versus intensity treatment, unlike flicker photometry, it is of interest to determine whether the two methods yield the same relative, i.e., spectral sensitivities for a given chromatic adapting field. It is found that there are no significant or systematic differences between the two measures of spectral sensitivity. Flicker photometry is the more precise measure. G.R.

**A82-28218** **Statistical optimization of interaction in man-machine systems.** I. V. Kurochkin and A. A. Mal'tsev. *(Avtomatika i Telemekhanika,* Aug. 1981, p. 35-45.) *Automation and Remote Control,* vol. 42, no. 8, Jan. 10, 1982, pt. 1, p. 1024-1031. 11 refs. Translation.

Statistical optimization of the interaction in a man-machine system is considered on the basis of finding the optimal gains of the actuating and indicating devices as a function of the characteristics of the human operator and the system noise level. It is assumed that the human operator acts like a Kalman filter and within certain limits he can adjust (adapt) his parameters to the parameters of the controlled plant and the environment in accordance with his performance criterion functional; the latter represents the operator's influence on the accuracy of stabilization of the plant coordinate, the intensity of 'his' control action, and the overall energy expenditure of the system on control. An analytic solution is studied, and it is experimentally checked for the problem of statistically optimal interaction between the human operator and a first-order dynamic plant. (Author)

**A82-28227 *** **Amino acid codes in mitochondria as possible clues to primitive codes.** T. H. Jukes (California, University, Berkeley, CA). *Journal of Molecular Evolution,* vol. 18, Dec. 1981, p. 15-17. 15 refs. Grant No. NGR-05-003-460.

Differences between mitochondrial codes and the universal code indicate that an evolutionary simplification has taken place, rather than a return to a more primitive code. However, these differences make it evident that the universal code is not the only code possible, and therefore earlier codes may have differed markedly from the previous code. The present universal code is probably a 'frozen accident.' The change in CUN codons from leucine to threonine (Neurospora vs. yeast mitochondria) indicates that neutral or near-neutral changes occurred in the corresponding proteins when this code change took place, caused presumably by a mutation in a tRNA gene. (Author)

**A82-28228 *** **Molecular relationships between closely related strains and species of nematodes.** M. H. Butler, S. M. Wall, K. R. Luehrsen, G. E. Fox, and R. M. Hecht (Houston, University, Houston, TX). *Journal of Molecular Evolution,* vol. 18, Dec. 1981, p. 18-23. 45 refs. Grant No. PHS-HD-11071; Grant No. NsG-7440.

Electrophoretic comparisons have been made for 24 enzymes in the Bergerac and Bristol strains of Caenorhabditis elegans and the related species, Caenorhabditis briggsae. No variation was detected between the two strains of C. elegans. In contrast, the two species, C. elegans and C. briggsae exhibited electrophoretic differences in 22 of 24 enzymes. A consensus 5S rRNA sequence was determined for C. elegans and found to be identical to that from C. briggsae. By analogy with other species with relatively well established fossil records it can be inferred that the time of divergence between the two nematode species is probably in the tens of millions of years. The limited anatomical evolution during a time period in which proteins undergo extensive changes supports the hypothesis that anatomical evolution is not dependent on overall protein changes. (Author)

**A82-28229 *** **Formation of pyrophosphate, tripolyphosphate, and phosphorylimidazole with the thioester, N, S-diacetylcysteamine, as the condensing agent.** A. L. Weber (Salk Institute for Biological Studies, San Diego, CA). *Journal of Molecular Evolution,* vol. 18, Dec. 1981, p. 24-29. 56 refs. Grant No. NsG-7627.

The formation of pyrophosphate, tripolyphosphate and phosphorylimidazole from orthophosphate in the presence of the thioester N, S-diacetylcysteamine is reported. Reactions performed with 0.20 M orthophosphate and 0.20 M N, S-diacetylcysteamine in 0.40 M imidazole under drying conditions at 50 C yielded pyrophosphate and tripolyphosphate after six days in the presence and absence of divalent metal ions. Reactions carried out at ambient temperature yielded phosphorylimidazole in the presence or absence of 0.06 M MgCl2, phosphorylimidazole and pyrophosphate in the presence of 0.05 M CaCl2, and pyrophosphate and tripolyphosphate in the presence of 0.15 M CaCl2. Such reactions represent potential pathways for the formation of energy-rich compounds providing free energy for use in prebiotic biopolymer synthesis. A.L.W.

**A82-28230** **Comparative biosequence metrics.** T. F. Smith (Northern Michigan University, Marquette, MI), M. S. Waterman (Los Alamos National Laboratory, Los Alamos, NM), and W. M. Fitch (Wisconsin, University, Madison, WI). *Journal of Molecular Evolution,* vol. 18, Dec. 1981, p. 38-46. 15 refs. NSF Grant No. DEB-78-14197.

A comparison is presented of the algorithms of Needleman and Wunsch (1970) and of Sellers (1974) for comparing unaligned macromolecular sequences in order to obtain a measure of their evolutionary relatedness. The Needleman-Wunsch algorithm is shown to result in alignments having a maximum similarity measure, while the Sellers algorithm results in alignments having a minimal distance or dissimilarity measure. The algorithms are equivalent, however, and give the same results under the conditions that the weight assigned to gaps in the Sellers algorithm exceeds that in the Needleman-Wunsch algorithm by the product of half the gap length with the maximum match value, and the sum of the respective degrees of similarity and dissimilarity equals a constant. Applications of the two algorithms to studies of sequences incorporating functionally aligned elements are illustrated, and it is noted that the algorithms may be used to align anything from geological sequences to protein amino acids. A.L.W.

**A82-28231 *** **The current status of REH theory.** R. Holmquist and T. H. Jukes (California, University, Berkeley, CA). *Journal of Molecular Evolution,* vol. 18, Dec. 1981, p. 47-59; Reply, p. 60-67. 70 refs. Grant No. NGR-05-003-460.

A response is made to the evaluation of Fitch (1980) of REH (random evolutionary hits) theory for the evolutionary divergence of proteins and nucleic acids. Correct calculations for the beta hemoglobin mRNAs of the human, mouse and rabbit in the absence and presence of selective constraints are summarized, and it is shown that the alternative evolutionary analysis of Fitch underestimates the total fixed mutations. It is further shown that the model used by Fitch to test for the completeness of the count of total base substitutions is in fact a variant of REH theory. Considerations of the variance inherent in evolutionary estimations are also presented which show the REH model to produce no more variance than other evolutionary models. In the reply, it is argued that, despite the objections raised, REH theory applied to proteins gives inaccurate estimates of total gene substitutions. It is further contended that REH theory developed for nucleic sequences suffers from problems relating to the frequency of nucleotide substitutions, the identity of the codons accepting silent and amino acid-changing substitutions, and estimate uncertainties. A.L.W.

**A82-28260** **Oculoparalytic illusion - Visual-field dependent spatial mislocalizations by humans partially paralyzed with curare.** L. Matin, E. Picoult, D. Young, R. MacArthur (Columbia University, New York, NY), J. K. Stevens (Toronto, University, Toronto, Canada), and M. W. Edwards, Jr. (Pennsylvania, University, Philadelphia, PA). *Science,* vol. 216, Apr. 9, 1982, p. 198-201. 12 refs. Grant No. NIH-EY-03198; Contract No. N62269-80-C-0298.

In darkness, observers partially paralyzed with curare make large (greater than 20 deg) gaze- and dosage-dependent errors in visually localizing eye-level horizontal and median planes, in matching the location of a sound to a light, and in pointing at a light. In illuminated, structured visual fields, visual localization and pointing are accurate but errors in auditory-to-visual matches remain. Defects in extraretinal eye position information are responsible for all errors. The influence of extraretinal eye position information on visual localization is suppressed by a structured visual field but is crucial both in darkness and for intersensory localization if visual capture is prevented. (Author)

**A82-28284** **Basic nitrogen-heterocyclic compounds in the Murchison meteorite.** P. G. Stoks and A. W. Schwartz (Nijmegen, Katholieke Universiteit, Nijmegen, Netherlands). *Geochimica et Cosmochimica Acta,* vol. 46, Mar. 1982, p. 309-315. 29 refs.

A fragment of the Murchison (C2) carbonaceous meteorite was analyzed for basic, N-heterocyclic compounds, by dual detector capillary gas chromatography as well as capillary gas chromatography/mass spectrometry, using two columns of different polarity. In the formic acid extract 2, 4, 6-trimethylpyridine, quinoline, isoquinoline, 2-methylquinoline and 4-methylquinoline were positively identified. In addition, a suite of alkylpyridines and quinolines and/or isoquinolines was tentatively identified from their mass spectra. The (iso)quinolines are found to contain methyl substituents exclusively. The distribution of the pyridines observed reveals a similarity to that observed from catalytic reactions of ammonia and simple aldehydes under conditions similar to those applied in Fischer-Tropsch reactions. (Author)

**A82-28393** # **Design and validation of a tracking test for forming matched groups for continuous tracking experiments.** F. D. Pitrella and W. Krüger. Wachtberg-Werthhoven, West Germany, Forschungsinstitut für Anthropotechnik (Forschungsinstitut für Anthropotechnik, Bericht, No. 49), 1981. 29 p. 22 refs.

Questions regarding the appropriate selection of an experimental design are examined, taking into account within-subject designs, hybrid designs, and between-subject designs. The selection of a criterion task and the selection of a matching test control device are discussed, and a description is presented of the procedure employed to validate a matching test. A pilot experiment is considered along with validation experiments, questions of predictive validity, and aspects of matching validity. A data analysis is conducted, giving attention to test reliability data, the performance degradation problem, the selection of the correlation coefficient, and the validation coefficients. Validation coefficients for low error half blocks and high error half blocks are listed in tables. G.R.

**A82-28394** # **The evaluation of information display on the basis of the transinformation (Die Bewertung von Anzeigen durch den Transinformationsfluss).** K. R. Kimmel. Wachtberg-Werthhoven, West Germany, Forschungsinstitut für Anthropotechnik (Forschungsinstitut für Anthropotechnik, Bericht, No. 52), 1981. 86 p. 92 refs. In German.

Investigations in the area of human engineering require, in addition to mathematical models describing the activities of man, also suitable parameters for an evaluation of the relevant ergonomic performance quantities. The present investigation is concerned with a comparison of two evaluative criteria, including the rms control error and the transinformation. The rms control error provides a measure concerning the control performance obtained for various parameter configurations. The parameter 'transinformation' can be used as a measure with respect to the capability of man to function as an information-processing system in connection with the performance of a control task. An understanding of a part of the arising transinformation-related effects could be obtained on the basis of theoretical considerations. The superiority of transinformation as a measure was found to be ultimately based on a greater general validity and the dimensionless properties. G.R.

**A82-28453** † **Tissue chemoreceptors (Tkanevye khemoretseptory).** V. A. Lebedeva, L. V. Filippova, T. N. Bratus', and V. N. Iartsev (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Feb. 1982, p. 137-149. 36 refs. In Russian.

Results of studies conducted over the past 25 years on the role of tissue chemoreceptors in the reflex regulation of cardiovascular and respiratory activity are reviewed. Experimental modifications of the acid-base balance of the cat small intestine by perfusion or the administration of acid are presented which have shown an increase in mesenteric nerve firing and elevation of systemic arterial pressure upon induced acid concentrations within the normal range, with a greater sensitivity to metabolic than respiratory acidosis. Further studies have shown the skeletal muscle chemoreceptors to be less sensitive than the small intestine chemoreceptors, although thresholds for stimulation were still in the physiological range, and have demonstrated a possible action of the small intestine chemoreceptors in the reflex regulation of respiration. Results are noted to support the view of Chernigovskii concerning the role of the tissue chemoreceptors in providing the central nervous system with information on the rate of tissue metabolism. A.L.W.

**A82-28454** † **Trace reactions and the ambient temperature (Sledovye reaktsii i temperatura sredy).** A. D. Slonim (Akademiia Nauk Kirgizskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Vysokogor'ia, Frunze, Kirgiz SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Feb. 1982, p. 172-176. 45 refs. In Russian.

Experimental data concerning thermoregulatory trace reactions on the organismal, organ and tissue levels in response to the effects of ambient temperatures is discussed. Observations have allowed three major types of reaction to be distinguished: adaptation upon continuous or intermittent exposure to temperature, the formation of a conditioned thermoregulatory reflex, and habituation following either single or repeated thermal stimuli. Reactions on the cellular and tissue levels are observed within 6 to 24 hours of the thermal stimulus, while reactions on the level of the entire organism form after 5 days of high-intensity intermittent exposure and persist for up to 30. The traces may be maintained after prolonged and repeated exposures for periods of months or even years, combining with natural physiological rhythms. The effects of thermal stimuli are observed to be greatest in the regulatory systems, and in complex behavioral acts, and lesser in effector systems and in the more simple behaviors. A.L.W.

**A82-28455** † **Some neurophysiological correlates of visual perception (O nekotorykh neirofiziologicheskikh korreliatakh zritel'nogo vospriiatiia).** V. D. Glezer (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Feb. 1982, p. 220-228. 33 refs. In Russian.

The role of the spatial frequency filter receptor fields of the visual cortex in shape and image perception is discussed on the basis of an examination of the structural organization of the simple and complex receptor fields of the visual cortex. The two dimensional weighting function determining the spatial frequency and orientation sensitivity of the spatial frequency filter is analyzed. Two types of modules, cortical neuron cylinders with overlapping visual fields but tuned to different spatial frequencies and orientations, are considered: those containing neurons which give a Fourier description of image portions and those which provide a power spectrum, which are suggested to function in texture description. Receptive field inhibition by side frequencies of the optimal frequency and orientations perpendicular to the optimal orientation is taken as evidence of the mutual inhibition of module neurons. A.L.W.

**A82-28456** † **Some mechanisms of central inhibition (O nekotorykh mekhanizmakh tsentral'nogo tormozheniia).** A. B. Kogan (Rostovskii Gosudarstvennyi Universitet, Rostov-on-Don, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Feb. 1982, p. 256-262. 28 refs. In Russian.

The organization of the various complex processes of central inhibition, by which the central nervous system takes part in the organization, fine-structure specification and space-time determination of any nervous act, is discussed. On the neuronal level, inhibition is shown to be expressed by the reorganization of subcellular elements, while at the level of nerve centers it is achieved by the patterns of inhibited and excited neurons and at the level of systems of nervous activity by the hierarchical relations of interacting nervous centers. It is noted, however, that at all levels inhibition or excitation is organized according to the specific space-time distribution of the activities of the components in question. A.L.W.

**A82-28457** † **The contribution of V. N. Chernigovskii to the development of diving physiology and medicine (Vklad V. N. Chernigovskogo v razvitie vodolaznoi fiziologii i meditsiny).** I. A. Sapov. *Fiziologicheskii Zhurnal SSSR,* vol. 68, Feb. 1982, p. 263-266. 16 refs. In Russian.

Work done by V. N. Chernigovskii in the field of diving physiology and medicine during his tenure at the Soviet Naval Medical Academy and the Standing Commission on Underwater Physiology and Medicine of the Presidium of the Soviet Academy of Sciences is reviewed. His major contributions were in the organization of fundamental studies of physiological reactions to elevated pressures and the occupational pathology of divers, and the planning, interpretation and generalization of the results of fundamental and practical investigations covering a wide range of subjects in the physiology and medicine of diving. A.L.W.

**A82-28458** † **Mechanisms for the adaptive and trophic effects of the sympathetic nervous system on cerebral vessels and tissue (Mekhanizmy adaptatsionno-troficheskikh vliianii simpaticheskoi nervnoi sistemy na sosudy i tkan' golovnogo mozga).** S. I. Teplov (Leningradskii Neirokhirurgicheskii Institut, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Feb. 1982, p. 275-283. 19 refs. In Russian.

The adaptive and trophic role of sympathetic innervation is studied in experiments on the immediate and delayed effects of cervical sympathectomy and postganglionic fiber stimulation on cerebral blood flow, hypothalamic neurosecretion and cerebral metabolism. Acute experiments on cats have revealed the adaptive functioning of the sympathetic innervation of cerebral vessels during rapid changes in systemic arterial pressure by rapid autoregulation and the maintenance of the blood-brain barrier, as well as the dependence of the circulatory effects of desympathetization on basal vascular tonus. The delayed effects of sympathetic excitation, vasoconstriction and edema, are found to depend on vasopressin secretion. Biochemical investigations on rats also demonstrated changes in ATPase activity, oxidation and phosphorylation rates, cAMP cGMP and prostaglandin concentrations following cervical desympathetization and cerebral ischemia. Results have significance for the understanding of brain compensatory mechanisms for hypoxia and other damaging factors. A.L.W.

**A82-28459** † **The information content of indicators of cerebral vascular responses to adequate influences (Ob informativnosti pokazatelei reaktsii mozgovykh sosudov na adekvatnye vozdeistviia).** Iu. E. Moskalenko, V. A. Khil'ko, G. B. Vainshtein, D. Kh. Gardovska, V. N. Semernia, B. V. Gaidar, and E. S. Hurguzhaev (Akademiia Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii, Leningrad, USSR; Voenno-Meditsinskaia Akademiia, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 68, Feb. 1982, p. 284-292. 8 refs. In Russian.

Possible indicators of cerebral vascular reactivity to adequate biomechanical effects are evaluated for their information content in the assessment of the physiological condition of cerebral circulatory regulation. Experiments involved the measurement of the level of cerebral blood flow, intracranial pressure, and cerebral blood-filling dynamics as well as central hemodynamic parameters in animals, healthy people including children of various ages and surgical patients with craniocerebral traumas under normal conditions and during the performance of the Valsalva, Queckenstedt, Stukkey and orthostatic tests. Changes in the levels of all the parameters measured during hemodynamic and liquorodynamic stresses are found to depend on the physiological condition of the organism, indicating that they may be used to provide objective criteria for the evaluation of the activity of regulatory processes in cerebral circulation. A.L.W.

**A82-28478** **The extraction and identification of drugs in aviation toxicology.** R. W. Mayes (RAF, Institute of Pathology and Tropical Medicine, Halton, Bucks., England). *(Joint Committee on Aviation Pathology Scientific Session, 12th, Aylesbury, Bucks., England, Oct. 14-16, 1980.) Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 332-335. 6 refs.

The drug screen as used in Aviation Pathology is unique in toxicological analysis in that it seeks to identify the whole range of clinical drugs at or below therapeutic levels. Recently the introduction of proteolytic enzymes has enabled more efficient extraction of drugs from tissues. The measurement of the Gas Chromatographic Retention Index can provide an important parameter in the identification of drug substances. (Author)

**A82-28479** **G stress on A-10 pilots during JAWS II exercises.** K. K. Gillingham, D. L. Makalous, and M. A. Tays (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 336-341. 9 refs.

It had been found that the jinking maneuvers employed by A-10 pilots to deprive the enemy of a readily trackable target resulted in a nearly constant exposure to moderate levels of G stress, with frequent excursions to relatively high G levels. The present investigation is, therefore, concerned with the contribution of G stress to fatigue experienced by pilots in connection with A-10 operations. Continuous time records of +G load on the aircraft were obtained on eight sorties with an Inflight Physiological Data Acquisition System module. It was found that defensive jinking maneuvers during combat necessitates numerous short exposures to G level in the 4-7 G range, but acute symptoms of G intolerance in A-10 pilots are nearly nonexistent. Repetitiveness of G exposure may contribute to pilot fatigue. However, the problem of task saturation is of far greater importance to the pilot than G stress. G.R.

**A82-28480** **Altitude and hypoxia as phase shift inducers.** I. E. Ashkenazi, J. Ribak, D. M. Avgar, and A. Klepfish (Tel Aviv University, Tel Aviv; Israel Air Force, Aeromedical Centre, Israel). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 342-346. 18 refs.

Experimental results to determine if an unnatural mechanism could be introduced so that circadian rhythm shifts could be accomplished abruptly, rather than over an adaptive period, are reported. Two females and one male practiced questionnaires and performance tests, maintained the same waking/rest cycles, and ate the same food for a week. Subsequent exposure to atmospheric pressure reduction and hypoxia in a flight simulator were followed by medical tests and performance of perceptual, recognition, and cognitive tests, and performance was tracked for 24 hr diurnal rhythms in performance ability. The tests were repeated for 6 days. The test results indicated a circadian rhythm phase shift immediately after exposure to simulated flight, which led to postulation of two kinds of biological synchronizers. One controls a slow adaptation to changes in the temporal order, letting each receptor (oscillator) in the body react in its own time, while a second mechanism reacts to alien cues not experienced by evolution, and which induces all receptors to react as one. M.S.K.

**A82-28481** **Evidence for the involvement of central alpha2 mechanisms in intrathoracic volume expansion-induced diuresis - A study with clonidine and propranolol.** P. Montastruc, J.-L. Montastruc, and L. D. Tran (Toulouse III, Université, Toulouse, France). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 347-353. 17 refs.

The inhibition of diuresis through use of clonidine, an alpha2-adrenergic agonist, induced by a rise in intrathoracic plasma volume in dogs was studied to define the role of alpha2 adrenoreceptors. Thirty anesthetized dogs were monitored for blood pressure, heart rate, respiratory frequency, and urinary volume, while the lungs were connected to a spirometer after tracheotomy. An incision was made in the fourth left intercostal space in order to insert a balloon into the left atrium, followed by inflation of the balloon with water. The dogs were exposed to negative pressure breathing for 30 min/hr. An intravenous or intracisternal clonidine injection inhibited the diuretic response to negative pressure breathing and left atrial distension. Intravenous yohimbine opposed the effects of the clonidine. The results indicated that the adrenergic receptor associated with the volumetric control of vasopressin secretion is an alpha2 subtype. M.S.K.

**A82-28482** **Ventilation and acid-base equilibrium for upper body and lower body exercise.** M. N. Sawka, D. S. Miles, J. S. Petrofsky, S. W. Wilde, and R. M. Glaser (Wright State University;

U.S. Veterans Administration Medical Center, Dayton, OH). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 354-359. 35 refs. Research supported by the U.S. Veterans Administration; Grant No. NIH-7-RO1-NS-16003-01; Contract No. F33615-78-C-0501.

Results of a comparison of pulmonary ventilation and blood acid-base responses of humans during arm crank and cycle ergometer exercise at various metabolic intensities are reported. Nine male subjects were monitored on ECG, cardiotachometer, spirometer, and gasometer, in addition to measurements of blood pH and flow, respiration rate, and alveolar ventilation. Oxygen uptake, pulmonary ventilation, alveolar ventilation and blood lactate values increased during submaximal exercise, and were lower in arm crank than in cycle ergometer maximal exercise. However, further investigation of the measured values in relation to peak oxygen uptake revealed identical response patterns, implying that the pulmonary ventilation and blood acid-base responses are more dependent on the relative exercise intensity than on the muscle groups employed. M.S.K.

**A82-28483** **Effect of flight on the Eustachian tube function and the tympanic membrane system - A follow-up study.** P. Groth, A. Ivarsson, and O. Tjernstrom (Lund, Universitet, Lund; Malmo General Hospital, Malmo, Sweden). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 360-364. 17 refs.

The Eustachian tube function in 32 aviation trainees was comprehensively tested in simulated flights in a pressure chamber on three occasions during their training. Their mean flight experience between tests comprised 150 h in jet training planes and 260 h in jet fighters. Their capacity to clear the ears in descent did not improve convincingly between tests, but the pressure opening level in ascent was significantly lowered. The elasticity of the eardrum system was significantly increased. The results suggest that the first test, before the flight training, is reliable for selection purposes. Reasons for difficulties in finding good agreement between test results and results of actual flight training are discussed. (Author)

**A82-28484** **The strength-endurance relationship in skeletal muscle - Its application to helmet design.** J. S. Petrofsky and C. A. Phillips (Wright State University, Dayton, OH). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 365-369. 17 refs. Grant No. DAMD17-80-C-0069.

The isometric strength and endurance of the neck muscles in man was measured in four male subjects during dorsal, ventral, and lateral flexion of the head in a helmet dynamometer. The purpose of these experiments was to quantify the maximum strength of the neck muscles in these directions and to examine the relationship between isometric strength and endurance for various submaximal isometric tensions. Isometric contractions were sustained to fatigue by these subjects at tensions of 25, 40, 55, 70, and 90% of the maximum isometric strength in each of the directions of movement. Generally, the endurance of the muscles involved in ventral flexion was less than that found in dorsal and lateral flexion of the head. However, the strength of the muscles involved was progressively greater for lateral, dorsal, and ventral flexion, respectively. The implication of these findings in helmet design and helmet loading are discussed. (Author)

**A82-28485** **Effects of space flight factors at the cellular level - Results of the Cytos experiment.** H. Planel, R. Tixador, Iu. Nefedov, G. Grechko, and G. Richoilley (Toulouse III, Université, Toulouse, France; Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 370-374. 20 refs.

Paramecium tetraurelia was cultivated aboard the Soviet orbital station Salyut 6. Each culture included one cell, bacterized culture medium, and two small glass tubes filled with a fixative. Cultures were kept at a low temperature before Soyuz-Salyut docking. Cultures were maintained at 25 plus or minus 0.1 C in orbit and were fixed every 12 h. The space flight resulted in an increase in cell growth rate and in cell volume. Measurements of cell dry weight and total protein content favor a higher cell water content. Respective roles of cosmic rays and microgravity are discussed. Cytos results are compared to those of previous space experiments. (Author)

**A82-28486 *** **A practical ultrasonic plethysmograph.** V. C. Wu, W. T. Nickell, and P. K. Bhagat (Kentucky, University, Lexington, KY). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 375-378. 9 refs. Contract No. NAS9-15452.

An ultrasonic plethysmograph, which gives improved performance over the standard Whitney Strain Gauge, is described. This instrument monitors dimension changes in human limbs by measuring the transit times of acoustic pulses across two chords of the limb. In the case of a small uniform expansion, the percentage change in limb volume is shown to be proportional to twice the percentage change in either of the measured chords. Measurement of two chords allows correction for possible non-uniform expansion. In addition, measurement of two chords allows an estimate of the absolute cross-sectional area of the limb. The developed instrument incorporates a microprocessor, which performs necessary calculation and control functions. Use of the microprocessor allows the instrument to be self-calibrating. In addition, the device can be easily reprogrammed to incorporate improvements in operating features or computational schemes. (Author)

**A82-28487** **Relationship of personality factors and some social habits to cardiovascular risk in submariners.** D. V. Tappan and B. B. Weybrew (U.S. Navy, Naval Submarine Medical Research Laboratory, Groton, CT). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 379-389. 34 refs.

**A82-28488** **Post-acceleration chaotic atrial rhythm.** J. E. Whinnery (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 390-392. 11 refs.

Chaotic atrial rhythm has traditionally been a dysrhythmia of the seriously ill elderly patient and commonly associated with pulmonary disease. It has been reported less frequently in young individuals with and without pulmonary disease. An apparently healthy asymptomatic centrifuge subject had reproducible episodes of chaotic atrial rhythm only in the recovery period after exhaustive +G2 simulated aerial combat maneuvering. The underlying mechanism responsible for initiation of chaotic atrial rhythm is unknown, but may be related to distension of atrial tissue. In lung disease with attendant pulmonary hypertension or post +G2 stress with the sudden increase in venous return, the necessary distension of the right atrium can be induced. The prognosis of individuals with chaotic atrial rhythm depends on the severity of the underlying illness and is probably benign in apparently healthy asymptomatic individuals with normal cardiovascular evaluation. (Author)

**A82-28489** **Airline pilot disability - Economic impact of an airline preventive medicine program.** R. Anderson (Air Canada, Montreal, Canada) and C. C. Gullett (Harvey W. Watt and Co., Atlanta, GA). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 393-402.

The current economic crisis facing most major United States airlines has forced a close examination of airline-sponsored activities. The effectiveness of one airline's pilot preventive medicine program was estimated by comparing disability experience of its pilots against the experience of a larger population of airline pilots. The preventive medicine program at the studied airline was shown to reduce disability experience by one-third, while saving the airline better than $6 million annually. This program yielded the airlines better than a 6-1 return on investment during the years studied. (Author)

**A82-28490** **Beta adrenergic blocking agents to control hypertension in aviation personnel.** C. L. Schamroth, R. Davidoff, J. M. Schamroth, and D. P. Myburgh (Institute for Aviation Medicine, Pretoria, Republic of South Africa). *Aviation, Space, and Environmental Medicine,* vol. 53, Apr. 1982, p. 403, 404. 6 refs.

Beta adrenergic receptor blocking agents were used in the treatment of 15 hypertensive aircrew who had failed to respond to thiazide diuretics. Atenolol (Tenormin) resulted in adequate control of blood pressure in all subjects. Side effects were minimal and insignificant. It is recommended that a cardio-selective, water-soluble beta blocker, such as atenolol, be made available to selected hypertensive aircrew. (Author)

**A82-28600** **Evidence for a boundary effect in roll vection.** J. T. Reason, A. R. Mayes, and D. Dewhurst (Manchester, Victoria University, Manchester, England). *Perception and Psychophysics,* vol. 31, no. 2, Feb. 1982, p. 139-144. 13 refs.

Experiments on the effects of the structural characteristics of large circular displays rotating around the line of sight on the magnitude and onset latency of the illusory tilt of the perceived true vertical are presented. In the first experiment, subjects viewed each of nine displays with varying numbers and areas of circular elements, and it was found that the tilt magnitudes increased and latency decreased as the sum of element diameters increased, suggesting the illusion of tilt to be linear related to the logarithm of total boundary length. A second experiment conducted with two displays of equal element boundary length but different spatial frequencies confirmed the determining influence of boundary length. A final experiment with four annular displays with the same number of equally sized elements at different retinal eccentricities showed that more peripheral displays produced a greater tilt magnitude and more rapid onset, indicating the boundary effect to be influenced by retinal location.

Ronald Robberecht and Martyn M. Caldwell *In its* Higher Plant Response to Elevated Ultraviolet Irradiance 30 Dec. 1981 59 p refs
Avail: NTIS HC A18/MF A01 CSCL 06C

Plant adaptations ameliorating or repairing the damaging effects of ultraviolet-B (UV-B) radiation on plant tissue were investigated. The degree of phenotype plasticity in UV protective mechanisms and acclimation in relation to the natural solar UV-B radiation flux and in an enhanced UV-B irradiance environment was also examined. Mechanisms by which plants avoid radiation, adaptations altering the path of radiation incident on the leaf, and repair processes were considered. Attenuation of UV-B by tissues, UV-B irradiation into the leaf, and the effects of UV-B on photosynthesis were investigated. J.D.H.

**ACTION SPECTRA FOR PHOTOSYNTHETIC INHIBITION Final Report**
Martyn M. Caldwell, Stephan Flint, and L. B. Camp *In its* Higher Plant Response to Elevated Ultraviolet Irradiance 30 Dec. 1981 20 p refs
Avail: NTIS HC A18/MF A01 CSCL 06C

The ultraviolet action spectrum for photosynthesis inhibition was determined to fall between that of the general DNA action spectrum and the generalized plant action spectrum. The characteristics of this action spectrum suggest that a combination of pronounced increase in effectiveness with decreasing wavelength, substantial specificity for the UV-B waveband, and very diminished response in the UV-A waveband result in large radiation amplification factors when the action spectra are used as weighting functions. Attempted determination of dose/response relationships for leaf disc inhibition provided inconclusive data from which to deconvolute an action spectrum. J.D.H.

The effects of 18.5 days of weightlessness on the body composition of young, growing, male laboratory rats were examined. Three groups of 5 rats each were examined. It is indicated that exposure of young, growing, male rats to 18.5 days of weightlessness produces: (1) no effect on the quantity of fat stored by the body; (2) a slight reduction in the quantity of fat free tissue laid down by the body; (3) a small reduction in the fraction of water contained by the fat free body mass; (4) a similar reduction in the fraction of water contained by the fat free skin and fat free carcass; (5) a shift in relative distribution of the total body water from skin to viscera; (6) a diminution in the fraction of extracellular water contained by the fat free body; (7) no effect on the fraction of total skeletal musculature contained by the fat free body, as indicated by body creatine content; (8) a sizeable reduction in the fraction of bone mineral contained by the fat free body, as calculated from body calcium content. The nature of the physiological changes induced by unloading from Earth gravity in the mammalian organism are illustrated. GRA

The experimental and clinical data published during the last 15 years that concern the effect of radioprotector drugs on the reactivity of organisms exposed to acceleration, vibration, motion sickness, hypodynamics, hypo- and hyperoxia are summarized and discussed. It is concluded that it is possible to use drugs to enhance radioresistance during flights; however, one should proceed with some caution in recommending a specific inflight radioprotective agent. The results of studies with the participation of men confirmed the assumption that intake of the short-acting radioprotector ambratin and prolonged-action protector amitetravit has no adverse effect on the human body according to tests with endurance of motion and prolonged accelerations. For this reason, they were recommended as radioprotective agents for use during manned flights aboard the Soyuz series of spacecraft. M.G.

**STRESS AND BIOLOGICAL RHYTHMS**

S. I. Stepanova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 2025 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 16-20

Avail: NTIS HC A07/MF A01

It is noted that numerous data give evidence that the reactions of the human body to diverse stimuli vary in an oscillatory, wave-like pattern. This phenomenon is associated with a general biological law of the wave-like pattern of adaptive processes, according to which they are realized at any stage (anxiety, resistance, depletion) in an oscillatory pattern. The wave-like pattern of the adaptive process is an expression of the dialectic law of unity and struggle of opposites; in this case, unity and struggle of construction and destruction, maintaining continuous self-reproduction and self-preservation of a living system in its environment. Consideration of the law of undulatory nature of the adaptation process in space opens the way for reliable forecasting of the dynamics of general state and different functions of cosmonauts during flights. It is imperative to make a special study of this phenomenon in order to further refine the set of measures related to the support of man's life in space. M.G.

### RESULTS OF STUDIES OF COSMONAUTS' VESTIBULAR FUNCTION AND SPATIAL PERCEPTION

I. Ya. Yakovleva, L. N. Kornilova, I. K. Tarasov, and V. N. Alekseyev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 26-33 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 20-26

Avail: NTIS HC A07/MF A01

The results of studying the vestibular function and the function of spatial perception in 26 cosmonauts before and after 30 space flights are discussed. The typical postflight changes in these functions were: an increase in the reactivity of the otolith organ; a decrease in the sensitivity of semicircular canals; a decline in the accuracy of perception of spatial coordinates; asymmetry of most parameters, and development of illusionary reactions inflight. The cosmonauts also showed individual variations with respect to the degree of the above responses, the dynamics and length of adaptation, the development of the motion sickness symptom-complex, etc. At R+O some cosmonauts exhibited a change in the direction of the eye counter-rotation, i.e., the negative otolith reflex or at turn towards the tilt direction. Possible mechanisms of these vestibular changes are discussed. M.G.

### PROBABILITY OF CAISSON DISEASE AFTER PRESSURE DROP FROM 840 TO 308 MM Hg

A. S. Barer, M. I. Vakar, G. F. Vorobyev, L. R. Isayev, S. N. Filipenkov, and V. I. Chadov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 34-37 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 26-28

Avail: NTIS HC A07/MF A01

The mode of decompression to a pressure of 308 mm Hg after exposure for 2 to 12 h to a hyperbaric air atmosphere at a pressure of 840 mm Hg was studied. The objective was to determine the effect of additional saturation of the body with nitrogen in the presence of elevated air pressure on probability of caisson disease (altitude decompression sickness) after changing to an absolute pressure of 308 mm, which is relatively safe in decompression from normal Earth atmosphere. The decompression from the hyperbaric air atmosphere with the pressure 840 + or - 5 mm Hg and subsequent 40 min exposure to the hypobaric atmosphere 308 + or - 1 mm Hg containing 40 to 95% O2 caused a decompression disease in 5 to 40% cases. The probability of the disease depends on the duration of nitrogen saturation at an increased pressure, physical fitness and individual susceptibility to decompression sickness. M.G.

### ION REGULATING FUNCTION OF HUMAN KIDNEYS DURING LONG-TERM SPACE FLIGHTS AND IN MODEL STUDIES

A. L. Grigoryev, B. R. Dorokhova, G. S. Arzamazov, and B. V. Morukov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 38-44 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 29-33

Avail: NTIS HC A07/MF A01

Ten cosmonauts who performed 30- to 175-day space flights onboard Salyut-4 and Salyut-6, and 50 test subjects exposed to head-down tilt (-4 deg) for 182 days were examined. In actual and simulated weightlessness renal excretion of calcium and potassium increased, reaching maximum during the 4 to 6th weeks. Before and after flight the test subjects were exposed to loading salt tests. Renal excretion of calcium and potassium in response to the loading tests with their salt postlight was much higher than preflight. During the potassium chloride load the aldosterone content in blood correlated with potassium excretion, and during the calcium lacate load an increase in calcium excretion was paralleled by a decrease in the parathormone content in blood. It is most likely that the negative balance of ions in weightlessness is associated with the reduced capacity of tissues to retain electrolytes due to the decreased ion pool. It was shown that electrolyte balance can be beneficially influenced by exercise. M.G.

### STRUCTURAL AND FUNCTIONAL PROPERTIES, AND ENERGY METABOLISM OF ERYTHROCYTES DURING SPACE FLIGHTS VARYING IN DURATION

A. S. Ushakov, G. I. Kozinets, S. M. Ivanova, and V. P. Matviyenko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 45-50 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 34-37

Avail: NTIS HC A07/MF A01

The structural and functional properties and energy metabolism of erythrocytes in peripheral blood of crew members who performed space flights of varying duration were investigated. Certain changes in the morphology, function, and energy metabolism of erythrocytes were seen after long-duration space flights. The demonstrated changes in energy metabolism (decline of ATP and increase in glycolytic activity) are probably related to triggering of compensatory mechanisms in response to the effects of space flight factors, and they are directed toward preserving the structural integrity of cells. On the whole, the obtained data indicate that short-term flights lasting up to 8 days do not elicit appreciable changes in structural and functional, as well as metabolic parameters of erythrocytes. M.G.

### RELATIONSHIP BETWEEN MICROFLORA AND IMMUNITY OF COSMONAUTS CARRYING STAPHYLOCOCCUS AUREUS IN THE NASAL CAVITY

T. N. Nikolayeva, Ye. V. Guseva, R. Yu. Tashpulatov, and G. D. Syrykh *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 55-58 refs Transl. into ENGLISH from Kosm. Biol.

Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 40-43

Avail: NTIS HC A07/MF A01

The correlations between microflora and preflight parameters of immunological resistance of cosmonauts who were carriers of S. aureus in the nasal cavity and subjects who are not carriers of this microorganism were examined. The crewmembers who carried aureus in the nasal cavity preflight showed an increased content of immunoglobulins IgA and IgM in the nasal cavity and that of IgM in blood serum postflight. The increased content of IgM in the nasal cavity did not depend on the size of the microbial focus in that biotope because there was no significant correlation between the two parameters (local and serum). M.G.

**N82-20844#** Joint Publications Research Service, Arlington, Va.

**CORRELATION BETWEEN INDIVIDUAL DISTINCTIONS OF FUNCTIONAL ASYMMETRY OF CEREBRAL HEMISPHERES AND PILOT PERFORMANCE**

A. A. Gyurdzhian and A. G. Fedoruk *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 59-62 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 44

Avail: NTIS HC A07/MF A01

It was shown that the high professional characteristics of pilots (quality of their flight performance and low susceptibility to spatial illusions) are in close correlation with the more pronounced predominance of the left hemisphere of the brain. The most informative criterion of the left hemisphere predominance that correlates with the flight performance is the index of the right ear predominance, i.e., the index of the left hemisphere predominance with respect to the speech perception. The less demonstrative parameters are the predominance of the right hand and the leading right eye. R.J.F.

**N82-20845#** Joint Publications Research Service, Arlington, Va.

**INFLUENCE OF ORIENTATION METHOD ON QUALITY OF PILOT'S SPATIAL ORIENTATION**

V. V. Lapa and N. A. Lemeshchenko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 63-68 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 63-68

Avail: NTIS HC A07/MF A01

The efficiency of pilot's spatial orientation after disorientation was studied in relation to the coordinates system used, i.e., the method of orientation. It was found that the use of the geocentric system of coordinates (as compared to that of the geocentric system) caused and increase in the time of spatial perception and in the number of errors. It can therefore be concluded that the instrument-aided spatial orientation inflight (with the Earth unseen) must help the pilot to develop spatial perception, reflecting spatial relations in the geocentric system of coordinates. Author

**SOME FEATURES OF EVALUATION OF WORK CAPACITY AND FATIGUE IN HELICOPTER PILOTS**

Yu. N. Kamenskiy *In its* USSR Rept: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1981 (JPRS-80323) 16 Mar. 1982 p 77-81 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 55-58

Avail: NTIS HC A07/MF A01

In helicopter pilots the direct index of their work capacity increased while indirect indices decreased in the course of the flying shift. The peak of their professional performance occurred at the end of the flying shift coinciding with the expressed feeling of fatigue. Evaluation of professional work capacity using direct methods does not yield adequate information about the state of pilots, making them unsuitable to diagnose fatigue and to measure permissible work load. Proper diagnostics of fatigue does not necessarily require examinations of the pilot's state inflight. Adequate information can be obtained on the ground during the flying shift. Author

Yu. G. Matveyev and Yu. N. Kamenskiy *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 82-86 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 59-61

Avail: NTIS HC A07/MF A01

The vibration damper reduces vibrations in the helicopter cockpit two to three-fold during horizontal flight and four to five-fold at the braking stage. The use of the vibration damper improves reception of the panel information and helicopter control, improves the working conditions, and maintains the high performance of the crewmembers during the flying shift. Avail: NTIS HC A07/MF A01

The effects of acceleration of different values (up to 2 g) on the level of motion sickness, vestibular, and postural reactions to rotation were studied. The experiments were carried out in a centrifuge equipped with a cabin that could be mounted at a different distance from the axis of rotation. Three experimental runs were conducted with a rate of rotation of 15.3 and acceleration values of 1.08, 1.6, and 2.0 g. Vestibular stimulation was produced by heat movements of a predetermined number. It was found that with increase in the the acceleration value the level of motion sickness decreased and the nystagmic reaction and balance dysfunction enhanced. Author

**COMPARATIVE EVALUATION OF PRESSURE CHAMBER CONDITIONING AND MAN'S ADAPTATION TO HYPOXIA AT HIGH ALTITUDE**

A. Yu. Katkov, R. N. Chabdarova, N. V. Pravetskiy, S. A. Vtoryy, V. V. Lenskiy, and A. A. Titov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 107-110 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 74-77

Avail: NTIS HC A07/MF A01

It was demonstrated that a 3 day pressure chamber training may increase the maximum tolerable altitude at rest from 8,600 to 8,900 m (depending on the onset rate of hypoxia) to 9,600 m. After pressure chamber training the maximum tolerable altitude increased from 8,200 m to 9,200 m, when exercising in a bicycle ergometer at 200 kgm/min and continuously ascending at a rate of 20 m/sec. A similar antihypoxic effect was also provided by a 7 day high altitude adaptation. Using polarographic measurements of oxygen tension in the skin, it was found that adaptation to hypoxia induced a more pronounced oxygen decrease at high altitudes. This can be attributed to a more distinct blood redistribution, i.e., a better blood supply of the vital organs at the expense of peripheral tissues. Author

**ACTIVITY OF SOME RAT LIVER ENZYMES FOLLOWING FLIGHT ABOARD COSMOS-936 BIOSATELLITE**

S. Nemeth and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 111-115 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 77-80

Avail: NTIS HC A07/MF A01

After the 18.5 day flight onboard the biosatellite Cosmos-936, the activity of 6 glucocorticoid-activated enzymes in the rat liver was investigated. It was found that at R+0 activities of tyrosine aminotransferase and tryptophan pyrolase, as well as fructose-1,6-diphosphatase, glucose-6-phosphatase, aspartate aminotransferase and alanine aminotransferase increased. Two two former enzymes react rapidly (within several hours) to an increase in the glucocorticoid level, whereas those latter react only to a continuous prolonged effect of glucocorticoids. These increases were paralleled by a growth in the glycogen concentration in the liver. The findings indicate that during the flight the rats underwent a chronic stress induced by weightlessness. **CATECHOLAMINE CONTENT OF RAT BLOOD AFTER FLIGHT ABOARD COSMOS-936 BIOSATELLITES**

R. Kvetnansky and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 116-119 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 80-83

Avail: NTIS HC A07/MF A01

The content of epinephrine and norepinephrine was measured in plasma of the rats flown onboard the biosatellite Cosmos-936 in the weightless state and under artificial gravity. With respect to the norepinephrine content there was no difference between the two flight groups, while its level in the flight rats was higher than in the ground-based controls. The epinephrine content in the flight rats remained essentially unchanged. These data give evidence that a prolonged exposure to weightlessness is not a stressogenic factor as related to the sympathoadrenal system. Author

Avail: NTIS HC A07/MF A01

The intensive discharge of microorganisms from the human integument into the environment in a pressure chamber was investigated. The role of microflora in the process of dissociation of urea contained in urine was investigated. The ammonia released as a result of hydrolysis pollutes the atmosphere of the sealed space and has an adverse effect on the quality of water reclaimed from urine and complicates the regeneration process proper. The following areas were studied: (1) investigation of dynamics of total number of microorganisms of urine when stored for a long time under nonsterile conditions and comparison to dynamics of decomposition of urea and accumulation of ammonia in urine; (2) determination of quantity of microorganisms and intensity of decomposition of urea when sterile urine is used for monocultures of bacteria that are the most typical of the microflora of urine and sealed habitats; (3) comparative evaluation of urease activity of several strains of bacteria isolated from the interior surfaces of a manned spacecraft in flight and analogous stock strains. **HEMATOGICAL LESIONS AS A FUNCTION OF DOSAGE OF LONG-TERM RADIATION**

V. G. Gorlov and O. V. Neyman *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 1, Jan. - Feb. 1982 (JPRS-80323) 16 Mar. 1982 p 124-129 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 16, no. 1, Jan. - Feb. 1982 p 86-89

Avail: NTIS HC A07/MF A01

The quantitative patterns of damage to the blood system in the course of prolonged exposure to the ionizing radiation inherent in space were studied as well as the time characteristics of development of lesions in different blast elements. An effort was made to determine the minimal volume of hematological tests during long-term exposure to radiation to assess the general state of the blood system, on the basis of comparison of dynamics of changes in bone marrow and peripheral blood. Experiments were conducted on 285 mongrel rats weighing 180 to 200 g. The animals were exposed to radiation at dose rates of 300, 100, and 50 R/day. They were exposed continuosuly for 22-23/day. Analysis of the findings revealed that the dynamics of decline in total number of bone marrow cells during the phase of primary depletion is governed by an exponential law.

There was distinct demonstration of the effects of cumulative dose and dose rate. A typical finding in all cell populations of bone marrow was an initial exponential decline in number of cells. B.W.

**PATTERNS OF BACTERIOPLANKTON GROWTH IN THE SEA Ph.D. Thesis**

Jed Alan Fuhrman 1981 122 p

Avail: Univ. Microfilms Order No. 8129243

The bacterioplankton role in organic matter flux from phytoplankton to higher trophic levels was studied. Two approaches were developed for measuring bacterioplankton growth. The first assumes only growing cells synthesize DNA; rates of tritiated thymidine incorporation into DNA are used to calculate bacterioplankton growth rates. The second approach measures the increase of bacterial numbers in seawater which had been filtered to remove bacteriovores. The thymidine incorporation approach was more sensitive, foster and easier to use at sea, and less subject to artifacts than the other approach, so it was chosen for most field studies almost exclusively by bacteria, and effectively all the 'active' bacteria utilize exogeneous thymidine. Production estimates were lower in Antarctic waters than in temperate waters and the fraction of primary production which is channeled into bacterioplankton production in both eutrophic and oligotrophic waters was approx. 5% to 25%. Dissert. Abstr.

**ULTRASONIC BLOOD FLOW IMAGING USING CORRELATION PROCESSING Ph.D. Thesis**

Michael De Olinger 1981 58 p

Avail: Univ. Microfilms Order No. 8126538

A general investigation of those fundamental processes affecting the design of ultrasonic blood flow imaging instruments is presented. First, known physical attributes of the various biological issues are combined to formulate a simple model which describes the interaction of ultrasound with the human body. Using this model, it is shown that a periodic pulse train is the preferred transmitted signal and that significant performance improvement may be realized by implementing true correlation as opposed to the conventional correlation processing. The desirability of having the true correlation receiver operate in a near optimum manner is demonstrated and the constraints imposed on signal bandwidth, effective signal duration, achievable velocity resolution and transducer angle are presented. In order to present the complex interrelationships which exist between these constraints, a unique set of design curves were generated. These curves indicate those combinations which insure near optimality. Dissert. Abstr.

**A QUANTITATIVE ANALYSIS OF TRANSCUTANEOUS OXYGEN MEASUREMENT Ph.D. Thesis**

Daniel Wade Piraino 1981 207 p

Avail: Univ. Microfilms Order No. 8126136

The effects of skin blood flow, diffusion, and temperature each independently on the transcutaneous measurement of oxygen were determined. A model was derived to predict the transcutaneous oxygen partial pressure under varying conditions of blood flow, temperature, and arterial oxygen partial pressure. The model was then compared to data from twelve volunteer subjects under different conditions of blood flow and temperature. The following results were found. (1) The model is valid only after heating the sensor to 44-45 C. (2) There is a hysteresis with temperature in the quantity d/x sub o, where d is the diffusion constant and x sub o is the distance from capillary to skin sensor. If skin is preheated to 44-45 C for one-half hour, transcutaneous oxygen measurements at a lower temperature will be higher than if the skin had not been preheated, at the same blood flow. (3) At 41 C, with the hemoglobin curve shift taken into account, skin blood flow is adequate for 97% arterialization. These results may be applied to the future correction of the transcutaneous oxygen value in adult patients in critical care areas. Dissert. Abstr.

**AN EVALUATION OF THE EFFECTIVENESS OF COLOR CODED TACTICAL SYMBOLOGY APPLIED TO MILITARY MAPS M.S. Thesis**

Peter Kafurke Sep. 1981 89 p refs
(AD-A109675) Avail: NTIS HC A05/MF A01 CSCL 05/1

This thesis examined the effect of using color coded tactical symbology on military maps. It reviewed the basic aspects of color coding techniques and described a task paced experiment in which conventional monochrome (blue vs. red) coding techniques were compared to multiple color coding. The multicolor coded stimuli used were 5 standard symbols representing Artillery, Armor, Infantry, Mechanized Infantry and Engineers. The symbols were coded red, green, blue, orange and black respectively. The analysis of the data obtained from 20 subjects revealed that performance under multicolor coding condition was significantly superior with respect to response time, accuracy of response and accuracy of location transfer onto a copy of the displayed map. **RELATIVE DEPTH AND LOCAL SURFACE ORIENTATION FROM IMAGE MOTIONS**

K. Prazdny Jan. 1981 34 p refs
(Contract DAAG53-76-C-0138; DARPA Order 3206)
(AD-A109565; CSC-TR-996) Avail: NTIS HC A03/MF A01 CSCL 05/8

A simple mathematical formalism is presented suggesting a mechanism for computing relative depth of any two texture elements characterized by the same relative motion parameters. The method is based on a ratio of a function of the angular velocities of the projecting rays corresponding to the two texture elements. The angular velocity of a ray cannot, however, be computed directly from the instantaneous characterization of motion of a 'retinal' point. It is shown how it can be obtained from the (linear) velocity of the image element on the projection surface and the first time derivative of its direction vector. A similar analysis produces a set of equations which directly yield local surface orientation relative to a given visual direction. The variables involved are scalar quantities directly measurable on the projection surface but, unlike the case of relative depth, the direction of (instantaneous) motion has to be computed by different means before the method can be applied. The relative merits of the two formalisms are briefly discussed. Author (GRA)

**DETERMINING THE INSTANTANEOUS DIRECTION OF MOTION FROM OPTICAL FLOW GENERATED BY A CURVILINEARLY MOVING OBSERVER**

K. Prazdny Feb. 1981 30 p refs
(Contract DAAG53-16-C-0138; DARPA Order 3206)
(AD-A109566; CSC-TR-1009) Avail: NTIS HC A03/MF A01 CSCL 05/8

A method is described capable of decomposing the optical flow into its rotational and translational components. The translational component is extracted implicitly by locating the focus of expansion associated with the translational component of the relative motion. The method is simple, relying on minimizing an (error) function of three parameters. As such, it can also be applied, without modification, in the case of noisy input information. Unlike the previous attempts at interpreting optical flow to obtain information about the three dimensional disposition of texture elements, the method uses only relationships between quantities on the projection plane. No 3D geometry is involved. Also outlined is a possible use of the method for the extraction of that part of the optical flow containing information about relative depth directly from the image intensity values, without extracting the 'retinal' velocity vectors. **DISPLAY-CONTROL COMPATIBILITY IN 3-D DISPLAYS. 1: EFFECTS OF ORIENTATION**
A. W. F. Huggins and David J. Getty 15 Nov. 1981 79 p refs
(Contract N00014-80-C-0750; NR Proj. 196-166)
(AD-A109491; BBN-4724) Avail: NTIS HC A05/MF A01 CSCL 09/2

The recent development of true volumetric displays, such as SpaceGraph, has raised questions about display-control relationships that cannot be answered from earlier work with 2-D displays. We measured the speed and accuracy of simple control decisions when the displayed object was presented in orientations rotated away from congruence with the control orientation. Reaction times were measured for identifying the marked face of a static cube, presented with SpaceGraph, as a function of how much the cube image was rotated away from congruence with fixed physical cube on which the observer responded, and which dimension of the display corresponding to the rotation axis. The following results were obtained: The fastest and most accurate identifications occurred when there was a simple direct spatial mapping between the display and the control for all orientations presented. Decision times made with this strategy were relatively unaffected by orientation; Marked display-control incompatibility was found under some specific conditions; and The shape of the decision time functions suggest that decision strategies involved both propositioned coding and mental rotation. **TESTING AND EVALUATION OF THE US NAVY SUPPLIED AIR SUIT**
O. D. Bradley and James D. DeField Feb. 1981 42 p ref
(Contract W-7405-eng-36)
(LA-8727-MS) Avail: NTIS HC A03/MF A01

An airline type supplied air suit for use during the asbestos removal operations is discussed. This supplied air suit was submitted for testing and evaluation of the degree of protection provided. Testing was limited to (1) evaluating interior sound pressure levels, (2) evaluating integrity of air lines and connectors, and (3) evaluating suit removal procedures. The testing was performed using a 16 cubic meter test chamber and a polydispersed dioctyl phthalate aerosol. Aerosol concentrations were measured with a light scattering photometer. The spunbonded olefin supplied air suit indicated protection factors in excess of 18K for all subjects tested and in all tests performed. R.J.F.

29 Jan. 1982 23 p refs
(Contracts NAS7-100; JPL-955332)
(NASA-CR-168652; JPL-9950-645; NAS 1.26:168652; ITEC-10-81) Avail: NTIS HC A11/MF A01 CSCL 05H

A class of interactive control systems is derived by generalizing interactive manipulator control systems. Tasks of interactive control systems can be represented as a network of a finite set of actions which have specific operational characteristics and specific resource requirements, and which are of limited duration. This has enabled the decomposition of the overall control algorithm simultaneously and asynchronously. The performance benefits of sensor referenced and computer-aided control of manipulators in a complex environment is evaluated. The first phase of the CURV arm control system software development and the basic features of the control algorithms and their software implementation are presented. An optimal solution for a production scheduling problem that will be easy to implement in practical situations is investigated. S.L.

**A REVIEW OF AIRCRAFT CABIN CONDITIONING FOR OPERATIONS IN AUSTRALIA**
Brian Rebbechi Oct. 1980 80 p refs
(AD-A109044; ARL/MECH-ENG-159) Avail: NTIS HC A05/MF A01 CSCL 13/1

A review is presented of aircraft cabin conditioning. This review has been undertaken because of the inadequate performance of many aircraft air conditioning systems in the hottest conditions encountered in Australia. The factors included in this study were the climatic conditions (both Australia and world-wide), human performance in hot conditions, the heat balance of aircraft cabins, cooling system performance, and specification of cabin environment control systems. It is concluded that climatic conditions in Australia are not severe in a world-wide context, and that there is no technological reason why the cabin conditioning systems of aircraft should be inadequate. Compliance with present RAAF specifications will provide an acceptable cabin environment for operation of aircraft in Australia. Author (GRA)

(AD-A109511; NOSC/TD-266-Rev-A) Avail: NTIS HC A06/MF A01 CSCL 14/2

This report describes the application of models and mockups as design aids in initially determining or improving control panel layouts and equipment/compartment arrangements to facilitate personnel and personnel/equipment interactions during system operations and maintenance. The report describes how these models and mockups (M&M) have been used, types of M&M and their applications in various phases of the design development cycle, and finally, a description of the use of M&M for man-machine design and design improvements. Three appendices are included in the report and contain: (1) Descriptions of NOSC M&M applications; (2) Examples of M&M specifications; and (3) An M&M characteristics checklist to aid in the preparation of M&M specifications. **A COMPARISON OF RAF AND ITALIAN AIRCREW: ANTHROPOMETRIC DATA**
E. J. Lovesey London HMSO Nov. 1980 20 p refs
(RAE-TM-FS-367; BR77205) Avail: NTIS HC A02/MF A01

Means and standard deviations were taken from Hertzberg's anthropometric survey of Italian pilots and from a survey of 2,000 RAF aircrews. The results generally show that the Italian pilots have similar body and limb circumferences to RAF aircrews. The Italian linear dimensions are, however, considerably less than those of the RAF aircrews. These differences need to be taken into account when designing cockpit and rear cabin work stations. The development of displays for monitoring and controlling complex technical systems is facilitated by employing a computer simulation of the man machine system during the theoretical design phase. A simulation model for the manual control task is described which leads to a method for evaluating displays. The capabilities and applications of this simulation model to a pilot airplane system restricted to aircraft motion in the vertical plane and a two channel pilot model are presented. Results suggest that the model should be further developed. Author (ESA)

Papers are presented concerning the nature and distribution of life in the universe, particularly in the areas of the origins of life, life-supporting environments, the evolution of life in the Galaxy, and the detectability of technological civilizations. Specific topics include a preliminary discussion of the role of life in the universe, followed by examination of the role of water in thin films and cold environments in the origin of life, the relation between atmospheric composition and evolution, the possibility of planetary orbits in multiple star systems, and the prospects for detecting extrasolar planetary systems. Attention is also given to the origin of protein synthesis, the evolution of intelligence in multicellular organisms, the manifestations of advanced civilizations, and plans and principles for SETI. Wistar-strain white female rats were divided into three groups, with the first group subjected to motion loading, the second used as control, and the third group was immobilized. A considerable reduction in numbers of corpora lutea was observed in the immobilized group, together with smaller numbers of embryos, high percent of embryo mortality, fetal growth retardation, and endometrium disorders. The control group showed no deviation from normal conditions, and there was slight improvement in reproductive activity of animals under motion loading. B.W.

**MICROBIAL ECOLOGY OF EXTREME ENVIRONMENTS: ANTARCTIC DRY VALLEY YEASTS AND GROWTH IN SUBSTRATE LIMITED HABITATS Progress Report, 1 Dec. 1980 - 30 Nov. 1981**
Helen S. Vishniac 30 Nov. 1981 27 p refs
(Grant NAGw-26)
(NASA-CR-168742; NAS 1.26:168742) Avail: NTIS HC A03/MF A01 CSCL 06C

The multiple stresses temperature, moisture, and for chemoheterotrophs, sources of carbon and energy of the Dry Valley Anarctica soils allow at best depauperate communities, low in species diversity and population density. The nature of community structure, the operation of biogeochemical cycles, the evolution and mechanisms of adaptation to this habitat are of interest in informing speculations upon life on other planets as well as in modeling the limits of gene life. Yeasts of the Cryptococcus vishniacii complex (Basidiobiastomycetes) are investigated, as the only known indigenes of the most hostile, lichen free, parts of the Dry Valleys. Methods were developed for isolating these yeasts (methods which do not exclude the recovery of other microbiota). The definition of the complex was refined and the importance of nitrogen sources was established as well as substrate competition in fitness to the Dry Valley habitats. S.L.

**SETTLEMENT OF FOULING ORGANISMS AT THE JITTRE NORTH BARNARD ISLAND RAFT SITE**
John A. Lewis Apr. 1981 13 p refs
(MRL-TN-450) Avail: NTIS HC A02/MF A01

Data on the settlement of the major fouling organisms below the marine exposure raft at the North Barnard Islands, Queensland, are presentd for a twelve month period. Organisms settled throughout the year. The red algal species Heterodermа sp. and Laurencia obtusa were the dominant organisms when assessed as number of individuals per unit area. However, the most abundant organisms were the brown alga Feldmannia indica, the hydroid Campanularia delicatula and the stoloniferous bryozoan Aetea truncata. In all, seventy-one taxa from ten phyla settled during the study period. On the basis of fouling settlement, the raft is considered a suitable site to test the resistance of coatings to fouling growth under tropical conditions. R.J.F.

**N82-21871#** Materials Research Labs., Melbourne (Australia).
**SETTLEMENT OF FOULING ORGANISMS AT THE HMAS STIRLING RAFT SITE**
John A. Lewis Nov. 1980 13 p refs
(MRL-TN-441) Avail: NTIS HC A02/MF A01

The settlement of fouling organisms on non-toxic panels was studied over a twelve-month period on a marine exposure raft at HMAS STIRLING in Cockburn Sound, western Australia. Monthly settlement counts for the six major organisms and water temperature measurements indicated that the raft met the criteria of Australian Standard 1580, test method 481.5 in these respects, as required for registration by the National Association of Testing Authorities. Larval settlement occurred throughout the year and water temperatures are within the range prescribed by the standard. Species which settled on the panels represented each of the major groups of fouling organisms. Panels immersed for twelve months were initially dominated by algae but these were subsequently displaced by barnacles, ascidians and bivalve molluscs. R.J.F.

Spheroidal aggregates of cultured chick cardiac cells were used to study effects of 2450-MHz radiofrequency radiation (RFR) on excitable membranes. Rhythmically beating aggregates under normal culture conditions were exposed to known amounts of RFR energy in a specially developed open-ended coaxial device. Exposure level was given in terms of Specific Absorption Rate (SAR) in mW/g. Short-term recordings with intracellular electrodes suggested that increased variability in beat rate and in action potential maximum upstroke velocity occurred in the range of 10-40 mW/g for continuous wave (CW) RFR and RFR modulated as 10.9-microsecond pulses at 10,000 pps (PW). Long-term recordings with extracellular electrodes and video imaging were used to gather interbeat interval (IBI) data for computing mean IBI and coefficient of variation (CV). Three-minute exposures to CW and PW RFR and to RFR square-wave modulated at 1.6 or 16 Hz were made for SARs between 1.2 and 85.5 mW/g. Decreases in mean IBI during exposure for SARs greater than 30 mW/g closely matched those expected from induced temperature rises. However, IBI changes at smaller SARs, including an increase at 1.2 mW/g, were not fully explained by temperature changes. Small changes in CV occurred during exposure and were similar to those during sham exposures. GRA

HC A02/MF A01

Phycobilisomes, serving as primary light harvesting complexes in cyanobacteria and red algae, were investigated. Allophycocyanin is in the center near the thylakoid. Stacked rods composed of phycocyanin, or phycocyanin phycoerythrin radiate peripherally from the allophycocyanin core. Phycobilisomes of Nostoc sp. and Fremyella diplosiphon, after separation into separate allophycocyanin and phycoerythrin phycocyanin fractions were associated in vitro. Hybrid phycobilisomes, derived from mixtures of phycobiliprotein from these species were also obtained. Phycobilisomes were similar in their sedimentation, absorption, fluorescence excitation, fluorescence emission, and by electron microscopy. Many of the colorless polypeptides were also highly similar between Nostoc and Fremyella. The polypeptide composition of Porphyridium cruentum phycobilisomes is the most complex of any thus far examined. The phycobiliprotein containing polypeptides comprised 84% of the total stainable protein, while the remaining were colorless. Most of the colorless polypeptides occurred in a pelletable fraction, which was enriched in allophycocyanin and phycocyanin. DOE

HC A02/MF A01

Research during the past year was directed at induction of specific protein synthesis in differentiated mammalian cells. The Primer Hypothesis for the regulation of eukaryotic gene expression suggests that RNA transcription is primed by small molecular weight RNA. It predicts that albumin mRNA transcription in a 3T3 fibroblast, which ordinarily does not produce albumin, can be initiated by RNA primer present in liver cells. During this past year experiments in which mouse fibroblasts were incubated with mouse liver RNA in the presence of polylysine were continued. Although these cells did indeed produce albumin which was detected by counterimmunoelectrophoresis the results were not consistent but depended on as yet unknown conditions of the extracted RNA. Conditions of phenol preparation extraction of RNA and incubation of RNA and cells were carefully monitored. None of these variations in technique were successful in reproducibly stimulating albumin synthesis on a repetitive basis although intermittently positive results were obtained. Because of these inconsistent results other methods of introducing RNA into cells were considered. DOE

**A COMPARISON OF THE ANTIMUSCARINIC PROPERTIES OF APROPHEN WITH THOSE OF SOME OTHER ANTICHOLINERGIC DRUGS**
R. M. Dawson, S. E. Freeman, and B. M. Paddle Sep. 1980
11 p refs
(MRL-R-794) Avail: NTIS HC A02/MF A01

Apparent dissociation constants K sub i for the interaction of benactyzine, aprophen, and atropine with the muscarinic cholinoceptor were determined in the brain (striatum and pons-medulla) and ileum of the guinea pig by competition with (3H)- quinuclidinyl benzilate (QNB) in a direct binding assay. Corresponding dissociation constants in the atrium were determined by antagonism of antagonism of acetylcholine-induced contractions. In all regions studied, aprophen and benactyzine (which are closely related structurally) were approximately equi-effective, based on their K sub i values, and about 1/4 as effective as atropine. Hyoscine and the glycollate T3436 were also studied in the atrium and found to be more potent muscarinic antagonists than atropine. Values of K sub i were in the nanomolar range. For any one antagonist, significant differences were observed between K sub i values for different regions. Author

**AN EXAMINATION OF THE FEASIBILITY OF ADMINISTERING PROPHYLACTIC PYRIDOSTIGMINE BY THE PERCUTANEOUS ROUTE**
Hugh D. Crone and Michael P. Bladen 1981 16 p refs
(MRL-TN-449) Avail: NTIS HC A02/MF A01

The feasibility of administering pyridostigmine by the percutaneous route was examined by the use of guinea pigs in vivo and their skin in vitro. Pyridostigmine has a possible use as a prophylactic against inhibit blood cholinesterase, producing effects observable in 30 minutes. Evidence of the storage of pyridostigmine in skin was found. The compound when crossing skin in vitro takes 1,000 minutes to reach an equilibrium rate. A permeability constant was estimated. The main problem remaining is the practical on of making a dosage form suitable for presenting the pyridostigmine at constant concentration to the skin for a long period. Author

(AF Proj. 7231)
(AD-A110199; AFAMRL-TR-81-113) Avail: NTIS HC A02/MF A01 CSCL 06/19

A review of the accident investigation reports of all non-fatal F/FB-111 ejections which occurred from 19 October 1967 to 26 March 1980 was conducted. The available spinal radiographs of the ejectees were also reviewed. The overall vertebral fracture rate among survived ejectees in a properly functioning module was found to be 29.5% (23 of 78). There was no correlation of these fractures with negative inertia reel strap angles. Five radiologic and orthopedic consultants did not agree on the specific mechanism of vertebral fracture in the involved crewmembers. A significant reduction in the vertebral fracture rate appears achievable only by decreasing the acceleration stresses imposed on the crewmembers during landing impact. GRA

Temporal factors in vision are reported. A literature and information search is included. An integrative review of the literature is provided which deals with application of findings to display design. Perception of temporal events - specifically motion perception (real and apparent) and flicker/flash sensitivity is examined. Temporally based phenomena which distort or degrade perception are covered. Features of these phenomena are observed in visual displays. Equations are provided for the calculation of design criteria (e.g., peripheral motion threshold, contrast thresholds, contrast thresholds and age, etc.). General guidelines are offered for incorporating design criteria into perceptions due to temporal events. E.A.K.

**SYMBOLIC REASONING AMONG 3-D MODELS AND 2-D IMAGES Ph.D. Thesis**
Rodney Allen Brooks Jun. 1981 98 p refs
(Contract MDA903-80-C-0102)
(AD-A110316; STAN-CS-81-861; AIM-343) Avail: NTIS HC A05/MF A01 CSCL 09/2

An implemented and operational model-based vision system is described. Examples are given of its interpretation of images, including extraction of three dimensional parameters from monocular images. Advances are presented in representation for geometric modeling of objects and objects classes, in techniques for manipulating non-linear symbolic algebraic constraints, in geometric reasoning in incompletely specified situations, and in constructing algebraic constraints from image measurements. Both generic object classes and specific objects are represented by volume models which are independent of viewpoint. Complex real world object classes are modeled. Variations in size, structure and spatial relations within object classes can be modeled. New spatial reasoning techniques are described which are useful both for prediction within a vision system, and for planning within a manipulation system. New approaches to prediction and interpretation are introduced, based on the propagation of symbolic constraints. Predictions are two-pronged. First, prediction graphs provide a coarse filter for hypothesizing matches of objects to image features. Second, prediction graphs contain instructions on how to use measurements of image features to deduce three dimensional information about tentative object interpretations. Interpretation proceeds by merging local hypothesized matches, subject to consistent derived implications about the size, structure and spatial configuration of the hypothesized objects. Prediction, description and interpretation proceed concurrently, from coarse object subpart and class interpretations of images, to fine distinctions among object subclasses, and more precise three dimensional quantification of objects. (AD-A110191; N14-0742-81C-0002) Avail: NTIS HC A04/MF A01 CSCL 14/5

Two levels of measurement were used in this investigation: subjective measures consisting of observer responses, and objective measures consisting of observer eye movements. Two major experimental techniques were used. These were the selectively stabilized image technique, in which part of the stimulus image was stabilized on the observer's retina; and a motion-in-depth technique that allowed us to measure changes in an observer's perception of three dimensional stimuli. The major findings of this study are: (1) the human stereo mechanisms responsible for the perception of depth and of motion-in-depth are sensitive to different aspects of the retinal images produced by three-dimensional displays than is the form perception mechanism; (2) it is possible to drive the human stereo mechanism with retinal images that do not drive the form perception mechanism; (3) observer variables such as ocular dominance and familiarity with three-dimensional displays interact with the three-dimensional display parameters (image luminance, image contrast, and interocular contrast), but appear not to influence the perception of motion-in-depth in three-dimensional displays during binocular image misregistration. **POTENTIAL FOR INTERACTION OF LOW-LEVEL IMPULSE AND CONTINUOUS NOISE**
Roger P. Hamernik, Donald Henderson, and Richard Salvi Wright-Patterson AFB, Ohio AMRL Mar. 1981 56 p refs
(Contract F33615-78-C-0513; AF Proj. 2312)
(AD-A109430 AFAMRL-TR-80-68) Avail: NTIS HC A04/MF A01 CSCL 06/19

The purpose of the experiments described in this report was to establish whether a synergistic interaction occurs between relatively low levels of continuous and impulse noise to produce an increased hearing loss and cochlear pathology. Twenty-three monaural chinchillas were used as experimental subjects. The animals were divided into six groups. Each group was exposed 8 hours per day for 8 weeks to various combinations of impulse and continuous noise presented at various levels. Using behavioral conditioning techniques, hearing thresholds were measured before, during, and after noise exposure. After a minimum of 30 days post-exposure the animals were killed and their cochleas were analyzed using the surface preparation technique. Histological results were qualified in the form of a cochleagram. In contrast to earlier findings the results of this study found no evidence of a synergistic interaction when the animals were exposed to a combination of continuous (between 75-85 dB SPL) and impulse (103 dB SPL peak exposure) noise. **HUMAN REACTION TO LOW FREQUENCY MOTION: PRELIMINARY STUDIES**
C. H. duRoss London HMSO 10 Nov. 1980 46 p refs
(RAE-TM-FS-365; BR77320) Avail: NTIS HC A03/MF A01

A ship motion simulator was used to ascertain the effects of low frequency ship and sinusoidal motion on man and his

performance. Ship motion signals based on those recorded at 25 knots into a force 4 wind were employed. Heave, pitch and roll sinusoidal motion in the 0.1 to 0.4 Hz frequency range occurred. A tracing task involving unsupported arm movements was seriously affected by the motion; a tracing task showed a small decrement in performance and a digit keying task was unaffected. There was no evidence that adverse effects were caused by motion sickness. Accelerations measured at the head and hand of subjects resulted in transmissibilities showing that relatively large rotational motions could be induced.

**RECORDING BASIC CLIMATIC PARAMETERS AND THEIR PROCESSING INTO INTEGRATED HEAT STRESS INDICES**
G. Kleinhanss, C. Piekarski, and E. Haug Mar. 1981 33 p refs Transl. into ENGLISH from Biomedizinische Tech. (Germany), v. 25, no. 1-2 1980 p 12-26
(DRIC-T-6292; BR78677) Avail: NTIS HC A03/MF A01

A method of estimating heat stress and climatic strain on man is described. Mathematical compound values based on simultaneously recorded meteorological factors related to physiological strain in exposed human beings are used. A procedure is presented which simplifies and improves the previous method used for field testing environmental strain of the workplace. With the aid of the mathematical model, it is possible using a simple electronic calculator to calculate the stress from a number of selected heat stress indices.

Factors important in assessing the pathogenic powers of infectious microorganisms, and possible means of protection during biological warfare, were analyzed. Nonspecific defense mechanisms comprise: (1) mechanical protection, (skin, mucous membrane); (2) chemical factors, (antimicrobial substances); (3) inflammatory response, (increased circulation, etc); and (4) phagocytosis, (antimicrobial cell activity). The immune defenses, give specific, but not absolute, protection against infectious diseases. Effects of microorganisms against which there is no immune defense are restricted by antibiotics/chemotherapeutic drugs, and immunotherapy. Author (ESA)

The purpose of this study was to measure the acute response of respiratory disease from peak hourly and daily average exposures to nitrogen dioxide alone and in combination with other pollutants. The study population was made up of families with children attending public elementary schools and living in four California South Coast Air Basin study areas: West Los Angeles/Santa Monica, Garden Grove/Westminister, Glendora/Covina, and Upland/Ontario. The role and responsibility of the contractor were to collect all background and health data, to process and assure the quality of the data and to prepare this report. Families were recruited for participation during the spring and summer months of 1978. Recruitment included face to face interviews for the purpose of collecting family background data. GRA

The distribution of fatigue lifetimes under biaxial stress for elastomers was developed. For crack growth under uniaxial fatigue an increase in frequency yielded an almost linear decrease in fatigue life. The predicted lifetimes are shorter than those experimentally measured. Comparison of the time-temperature superposed (TTS) master creep compliance curves with the realtime, longterm creep at 37C indicates the real-time creep to be slightly higher than the TTS predictions. A linear viscoelastic analysis is developed to predict creep under superimposed static and dynamic uniaxial loadings. GRA

**DEVELOPMENT AND PERSISTENCE OF ADAPTATION TO OZONE EXPOSURE IN OZONE-SENSITIVE SOUTHERN CALIFORNIA RESIDENTS** Final Report
William S. Linn and Jack D. Hackney 20 Aug. 1981 33 p refs
(PB82-125899; CRC-APRAC-CAPM-31-79-1-80) Avail: NTIS HC A03/MF A01 CSCL 06E

Eleven healthy volunteer subjects believed to be atypically reactive to ozone were exposed to approximately 0.47 ppm ozone (ultraviolet calibration method) in purified air for four successive days to develop adaptation if possible. They were reexposed similarly once during each of the following five weeks to investigate the persistence of the adaptive response. Exposures lasted two hours and included stresses of heat and intermittent moderate exercise. Responses to ozone were assessed by forced expiratory lung function tests and by subjects' reports of symptoms. For the group as a whole, the time courses of lung function and symptom responses were very similar. For the typical subject in this group, adaptation was partially lost after four ozone-free days, and more or less completely lost after seven ozone-free days. GRA

**SUBJECTIVE CONFIDENCE IN FORECASTS**
Baruch Fischhoff and Don Macgregor Dec. 1981 48 p refs
(Contract N00014-80-C-0150)
(AD-A109730; PTR-1092-81-12) Avail: NTIS HC A03/MF A01 CSCL 05/10

To be useful, a forecast must not only predict the future, but also give some indication of how much confidence to place in that prediction. The appropriateness of people's confidence in their general knowledge has been studied extensively. After briefly reviewing that literature, the present article attempts to make it more directly relevant to forecasters by repeating previous studies in the context of confidence in forecasts. The most robust of previous results was strongly replicated: participants were greatly overconfident in their predictions when dealing with a fairly hard-to-predict set of events. A procedure that had previously proved effective in reducing overconfidence, forcing respondents to provide reasons why their answers might be wrong, was of minor value here. A new result was the discovery of a simple indicator of the quality of people's confidence assessments, whether they ever expressed certitude. Possible implications of these results for producing and using forecasts are discussed.

**DIAGNOSTICITY AND THE BASE-RATE EFFECT**
Baruch Fischhoff and Maya Bar-Hillel Nov. 1981 44 p refs
(Contract N00014-80-C-0150)
(AD-A109731; PTR-1092-81-11) Avail: NTIS HC A03/MF A01 CSCL 05/1

A common judgmental task involves predicting the category membership of an individual on the basis of information specific to that individual and background information regarding the base rate of different categories. According to statistical theory, predictions may deviate from base rates only to the extent that the individuating information is diagnostic. Previous research has demonstrated that diagnosticity is often judged by 'representativeness', the degree to which the individuating information is differentially suggestive of the different possible categories. Thus, information with high differential representativeness, even if it is worthless (e.g., because its sources are unreliable), will swamp base-rate information. The present studies varied differential representativeness by manipulating the degree to which the

prediction categories are similar to one another vis a vis the individuating information, and hence similarly represented by that individuating information. It was found that the effect of the base rate increased systematically as differential representativeness decreased. Representativeness was measured independently by several converging techniques. These measures predicted the magnitude of the base rate over entire sets of descriptions.

**A STUDY OF THE EFFECTS OF FLUCTUATION FREQUENCY ON ADVERSE REACTIONS TO NOISE**
H. C. Fuller and D. W. Robinson Oct. 1980 28 p refs
(NPL-Ac-97; ISSN-0143-7143) Avail: NTIS HC A03/MF A01

The effects of the frequency of level fluctuations on the adverse reaction generated by a noise stimulus were investigated. As a result of theoretical considerations, it was suggested that the fluctuation term in the formula for noise pollution level should be weighted according to the frequency of the level fluctuations. Subjects completed a calculation task in a listening room, giving their response on a questionnaire. Test stimuli with levels varying by 10 dB and 20 dB with periods of between 6 and 600 sec were used and the adverse reaction generated after 10 min was measured. The results were examined in relation to the noise ratings L sub NP, L sub EG a measure of the rate of fluctuation of the level, and the proposed modification of L sub NP. None of the four measures fully explains the results, but there is some evidence to support the modification of L sub NP suggesting that only level fluctuations at frequencies between 0.1 Hz and 0.01 Hz contribute to the general adverse reaction.

**COGNITIVE PERFORMANCE, SLEEP QUALITY AND MOOD DURING DEEP OXY-HELIUM DIVING**
Vivien J. Lewis and Alan D. Baddeley Jan. 1981 32 p refs
(RPN-1/81) Avail: NTIS HC A03/MF A01

Five dives are reported, lasting between 18 and 26 days, and reaching maximum simulated depths of between 300 meters sea water (msw) and 540 msw. Tests of cognitive functioning, including associative and short term memory, arithmetic ability, perceptual speed, spatial manipulation, grammatical reasoning and semantic processing, were administered to well-practiced subjects prior to each dive, at maximum depth and again during decompression. Self-report measures of sleep and mood questionnaires were administered for a period extending from one week before each dive commenced until at least one week after the dive was completed. The results indicate significant impairments in all performance tasks at maximum depth, except for the tests of associative memory and grammatical reasoning. A significant reduction in sleep and decrease in the subjective level of alertness is found at maximum depth for all dives.

**MOBILITY AID FOR THE BLIND Final Report, 1 Dec. 1980 - 30 Nov. 1981**
Jan. 1982 40 p refs
(Contract NCC2-113)
(NASA-CR-168731; NAS 1.26:168731) Avail: NTIS HC A03/MF A01 CSCL 05H

A project to develop an effective mobility aid for blind pedestrians which acquires consecutive images of the scenes before a moving pedestrian, which locates and identifies the pedestrian's path and potential obstacles in the path, which presents path and obstacle information to the pedestrian, and which operates in real-time is discussed. The mobility aid has three principal components: an image acquisition system, an image interpretation system, and an information presentation system. The image acquisition system consists of a miniature, solid-state TV camera which transforms the scene before the blind pedestrian into an image which can be received by the image interpretation system. The image interpretation system is implemented on a microprocessor which has been programmed to execute real-time feature extraction and scene analysis algorithms for locating and identifying the pedestrian's path and potential obstacles. Identity and location information is presented to the pedestrian by means of tactile coding and machine-generated speech.

**RESEARCH AND DEVELOPMENT OF A VERSATILE PORTABLE SPEECH PROSTHESIS Final Report**
Nov. 1981 82 p refs
(NsG-2313)
(NASA-CR-168741; NAS 1.26:168741) Avail: NTIS HC A05/MF A01 CSCL 05H

The Versatile Portable Speech Prosthesis (VPSP), a synthetic speech output communication aid for non-speaking people is described. It was intended initially for severely physically limited people with cerebral palsy who are in electric wheelchairs. Hence, it was designed to be placed on a wheelchair and powered from a wheelchair battery. It can easily be separated from the wheelchair. The VPSP is versatile because it is designed to accept any means of single switch, multiple switch, or keyboard control which physically limited people have the ability to use. It is portable because it is mounted on and can go with the electric wheelchair. It is a speech prosthesis, obviously, because it speaks with a synthetic voice for people unable to speak with their own voices. Both hardware and software are described. R.J.F.

**HUMAN ENGINEERING GUIDES TO DESIGN OF DISPLAYS FOR UNDERWATER APPLICATIONS**
W. S. Vaughan, Jr. and J. A. S. Kinney (Naval Submarine Medical Research Lab.) Dec. 1981 40 p
(Contract N00014-79-C-0802; NR Proj. 196-157)
(AD-A110317) Avail: NTIS HC A03/MF A01 CSCL 05/5

This report contains recommendations for designers of displays for systems that operate underwater. The recommendations are based on a foundation of research and analyses contained in a companion document (Vaughan and Kinney, 1980). Both the current report and the database document are organized by designer decisions related to the legibility of panel displays and to the visibility of painted objects. Five decisions comprise the content organization of the report: eye-to-console distance, symbol size, display luminance, peripheral location, and use of color. Material presented within each section serves first, to provide a rationale for the significance of human factor considerations to the decision; second, to provide necessary translations of scientific concepts into engineering concepts; third, to state concise recommendations for how to resolve the design issue from the viewpoint of human factors. ### CONCEPTUAL ERGONOMICS: EARLY DETECTION OF FIELD OF VISION RESTRICTIONS BY MEANS OF ERGOSCOPY

H. J. Windberg London HMSO Nov. 1980 16 p refs Transl. into ENGLISH of ERGONOMICS, v. 23, no. 4, 1980 p 341-350
(DRIC-T-6253; BR76774) Avail: NTIS HC A02/MF A01

A photographic apparatus based on the endoscope for determining the field of vision from control positions using scale models is described. Called ergoscopy, the technique uses a pipe with an optical system and a flexible optical conductor cable fitted to a camera. The ergoscope allows the designer to investigate sight angles of operators and recognize hindrances by simulating critical conditions with small scale models. Design mistakes may therefore be eliminated before the 1:1 scale prototype is built. Illustrations with 1:20 and 1:100 models are given. Author (ESA)

**N82-21900#** Royal Aircraft Establishment, Farnborough (England).

### REPORT ON A VISIT TO CANADA OF THE 10-17 MAY 1980 SECOND INTERNATIONAL SYMPOSIUM ON PERSONAL HEARING PROTECTION IN INDUSTRY

J. A. Chillery London HMSO 29 Jan. 1981 24 p Conference held at Toronto, 14-16 May 1980
(RAE-TM-FS-377; BR78127) Copyright. Avail: NTIS HC A02/MF A01

Material presented at the symposium is summarized and evaluated. Several papers cover the testing of protectors, their design and performance, including the objective measurement of ear-plug attenuation, and the miniature microphone method of measuring ear-muff attenuation. Other papers describe an active noise reduction system, correlation between objective and subjective data, correlation between laboratory and field data, and the measurement of headband force. Author (ESA)

**N82-21901#** Royal Aircraft Establishment, Farnborough (England).

### MEASUREMENT OF THE HEADBAND FORCE OF CIRCUMAURAL HEARING PROTECTORS

J. A. Chillery London HMSO 5 Feb. 1981 25 p refs Presented at Inaugural Tech. Meeting of Can. Acoust. Soc., Toronto, 12 May 1980
(RAE-TM-FS-378; BR78249) Avail: NTIS HC A02/MF A01

Circumaural hearing protector design is summarized. Existing force meters for the measurement of the headband force of such protectors are assessed. The construction and preliminary testing of a reliable method for measuring the force with which the protector cups of an earmuff are pressed against the head of a wearer are described together with the necessary modifications, such as changes in dimensions, to enable the device to fit inside, and support, a flight helmet. Author (ESA)

**N82-21902#** Royal Aircraft Establishment, Farnborough (England).

### A TEST FACILITY FOR THE OBJECTIVE MEASUREMENT OF CIRCUMAURAL HEARING PROTECTOR ATTENUATION

J. A. Chillery London HMSO 5 Feb. 1981 33 p refs Presented at 2nd Intern. Symp. on Personal Hearing Protect. in Ind., Toronto, 14-16 May 1980
(RAE-TM-FS-379; BR78126) Avail: NTIS HC A03/MF A01

The development of a facility suitable for quality control work is developed. Published data were surveyed to identify the relative importance of parameters of a protector and the head of a wearer. The most important are the attenuation values of different ear geometries, reproducible leakage simulation and the effect on attenuation values of different types of skin and flesh. The construction of an artificial head and of testing equipment are described. Important factors are high acoustic isolation and simplicity of use. The performance of the device, using various test and sound fields and procedures, was examined. It is found that reliable data are generated. A pilot study on one example of protector is described. Author (ESA)

**N82-21903#** Royal Aircraft Establishment, Farnborough (England).

### THE IMPORTANCE OF EAR-LIKE COUPLERS IN THE DESIGN OF AN OBJECTIVE TEST FACILITY FOR THE MEASUREMENT OF EARMUFF INSERTION LOSS

J. A. Chillery Jan. 1981 24 p refs Presented at 2nd Intern. Symp. on Personal Hearing Protection in Industry, Toronto, 14 May 1980
(RAE-TM-FS-380; BR78125) Avail: NTIS HC A02/MF A01

An objective method of earmuff attenuation measurement is outlined. Experiments were performed on an electronic manikin, a prototype artificial head, and two ear-like couplers. These show that the acoustic behavior of the ear canal and middle-ear is unaffected by a protector covering the outer ear. It is therefore unnecessary to include a simulation of an ear canal or an ear-like coupler in an objective test facility for measuring insertion loss. Data are presented which show that, for insertion loss measurements, the attenuation spectra produced by an objective method are practically independent of the method of acoustically coupling the measuring microphone to the volume contained by the earmuff. This simplifies the design of the objective method. Author (ESA)

**N82-21904#** Motor Industry Research Association, Lindley (England).

### ANTHROPOMETRIC PROFILE OF THE BRITISH CAR OCCUPANT

C. M. Haslegrave and R. N. Hardy 1979 76 p refs Sponsored in part by MEMTRB
(MIRA-1979/2) Avail: NTIS HC A05/MF A01

British car drivers and front seat passengers were anthropometrically surveyed. Seventeen dimensions required in the design of cars were measured. The dimension distributions of the male and female driving populations show variations with age, stature and weight. No significant difference is found between female occupants of either front seat, but male drivers are found to be significantly older and heavier than male passengers, although there was little difference in stature. Comparison with the dimensions of the US civilian population show that where male dimensions are based on American statistics they are adequate for the present British driving population, however, British female drivers are significantly taller than US women. A factor analysis is used to explore the relationships between dimensions relevant to vehicle design. Three factors are used to construct a set of body indices which are suggested as shape parameters in the definition of a range of anthropometric dummies and models. Author (ESA)

### EVALUATION OF THE NBC OVERGARMENTS MANUFACTURED BY SEYNTEX BELGIUM

J. Medema May 1980 19 p ref
(Contracts A78/KL/106; A77/KL/061)
(PML-1980-33; TDCK-73841) Avail: NTIS HC A02/MF A01

A protective clothing system against chemical warfare agents (liquid and vapor) was evaluated. The suit was exposed to a simulated spray attack of mustard gas droplets. The suit was used in combination with ordinary combat clothing in penetration cells. Protection time is defined as the time in which four micrograms/cu cm cloud penetrate. Protection was measured after: (1) outdoor exposure, including rain; (2) 12 hr cycling sweat poisoning tests; (3) 5 years storage; (4) accelerated aging; (5) and 120 passes over an obstacle course. No serious degradation of protection is reported. Author (ESA)

**N82-21906#** Technical Research Centre of Finland, Espoo. Electrical Engineering Lab.

### GUIDELINES FOR MAN-MACHINE INTERFACE DESIGN

Jukka Ranta, Bjoern Wahlstroem, and Rolf Westesson Aug. 1981 135 p refs
(VTT-RR-23/81; ISBN-951-38-1279-0; ISSN-0358-5077)
Avail: NTIS HC A07/MF A01

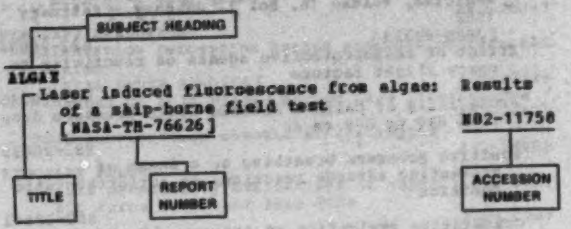
Guidelines applicable to the design stage of complex process automation systems were designed. Three decision making levels are discerned: (1) decisions are made concerning the launching of the project; general outlines and criteria for later phases are created; (2) the degree of automation, basic interface design, coding system, instrumentation, and procedures are decided; (3) the practical implementation of specified subareas, control system parameter design, or instrumentation scale design. The guidelines ensure that factors affecting decision making are taken into account at each level. Author (ESA)

# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *A Continuing Bibliography (Suppl. 234)*

JULY 1982

## Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

The state of alpha 1- and beta 1-adrenergic reactions upon cold acclimatization A82-26752

The participation of adrenergic mechanisms in microcirculation changes under stress A82-27757

Evidence for the involvement of central alpha2 mechanisms in intrathoracic volume expansion-induced diuresis - A study with clonidine and propranolol A82-28481

Beta adrenergic blocking agents to control hypertension in aviation personnel A82-28490

AEROSPACE ENVIRONMENTS

Problems of the development of life support and safety assurance system for space crews A82-27518

Microdosimetric analysis of the variability of radiobiological effects in experiments with high-energy radiation --- in space A82-27810

Human tolerance of rotation at different levels of hypergravity N82-20852

AEROSPACE MEDICINE

Elevation of hypoxia tolerance under the influence of prolonged fasting A82-25679

Tennis elbow in aviators A82-26243

Principal results of medical studies carried out during long-term manned flights in the Salyut 6-Soyuz-Progress orbital complex A82-27512

New trends in the development of aerospace medical technology A82-27515

Changes in contractile protein composition and properties following space flight A82-27728

Seventy-five days in space --- technical and medico-biological experiments A82-27773

The extraction and identification of drugs in aviation toxicology A82-28478

Airline pilot disability - Economic impact of an airline preventive medicine program A82-28489

Beta adrenergic blocking agents to control hypertension in aviation personnel A82-28490

USSR Report: Space biology and aerospace medicine, volume 16, no. 1, January - February 1982 [JPRS-80323] N82-20834

Effect of radioprotective agents on reactivity to space flight factors N82-20835

Probability of caisson disease after pressure drop from 840 to 308 mm Hg N82-20839

Positive pressure breathing as a means of preventing adverse reactions to antiorthostatic position N82-20842

Comparative evaluation of pressure chamber conditioning and man's adaptation to hypoxia at high altitude N82-20853

Activity of some rat liver enzymes following flight aboard Cosmos-936 biosatellite N82-20854

Catecholamine content of rat blood after flight aboard Cosmos-936 biosatellites N82-20855

Hematogical lesions as a function of dosage of long-term radiation N82-20857

Serotonin and histamine metabolism in cosmonauts N82-20858

Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission [NASA-TM-76793] N82-20864

AGE FACTOR

Age-related features of blood-coagulation changes in the treatment of cerebral ischemias with indirect-action anticoagulants A82-27754

Effects of exercise adaptation on the age variation of human cardiac contractile function and left ventricular mass A82-27785

AGRICULTURE

The influence of the seasonal factor and the intensity of work on the basic physiological functions of agricultural workers A82-25685

AIR CONDITIONING

A review of aircraft cabin conditioning for operations in Australia [AD-A109044] N82-20880

AIR FLOW

Effect of breathing patterns on the perceived magnitude of added loads to breathing A82-26813

AIR POLLUTION

Effects of short-term intermittent air pollutants on incidence and severity of acute respiratory disease: Data collection and quality assurance [PB82-129479] N82-21887

AIR TRAFFIC CONTROLLERS (PERSONNEL)

Conductors of the airways --- air traffic controllers A82-27812

AIRCRAFT ACCIDENT INVESTIGATION

Sarcoidosis in aircrew A82-26240

AIRCRAFT ACCIDENTS

Pilot judgment - Training and evaluation A82-26777

AIRCRAFT COMPARTMENTS

A review of aircraft cabin conditioning for operations in Australia [AD-A109044] N82-20880

Cabin ozone and tropopause definition N82-21151

AIRCRAFT CONTROL
  Mode of flight and a mathematical model of pilot activity relating to flight-vehicle control
    A82-27513
  System simulation applied to the evaluation of displays for guidance and control
    [ESA-TT-659] N82-20883
AIRCRAFT GUIDANCE
  System simulation applied to the evaluation of displays for guidance and control
    [ESA-TT-659] N82-20883
AIRCRAFT HAZARDS
  Cockpit automation and workload reduction - Too much of a good thing
    A82-26047
AIRCRAFT MANEUVERS
  Orientation perception during aircraft coordinated turns
    [AIAA PAPER 82-0250] A82-27096
  G stress on A-10 pilots during JAWS II exercises
    A82-26479
  Post-acceleration chaotic atrial rhythm
    A82-28488
AIRCRAFT PILOTS
  Serial personality evaluations of repatriated U.S. Air Force southeast Asia POWs
    A82-26237
  Airline pilot disability - Economic impact of an airline preventive medicine program
    A82-28489
AIRCRAFT SAFETY
  F/FB-111 ejection experience (1967-1980). Part 1: Evaluation and recommendations
    [AD-A110199] N82-21879
AIRLINE OPERATIONS
  Conductors of the airways --- air traffic controllers
    A82-27812
  Airline pilot disability - Economic impact of an airline preventive medicine program
    A82-28489
ALGAE
  Settlement of fouling organisms at the JITTRE North Barnard Island raft site
    [MRL-TN-450] N82-21870
  Settlement of fouling organisms at the HMAS STIRLING raft site
    [MRL-TN-441] N82-21871
  Primary light-harvesting system: Phycobilisomes and associated membranes
    [DE81-020326] N82-21874
ALTITUDE ACCLIMATIZATION
  The effect of adapting to high-altitude hypoxia on certain indicators of catecholamine metabolism in rats in the case of spontaneous hereditary hypertension
    A82-27758
  Adaptive changes in the rat hypophysical-adrenal system upon altitude hypoxia
    A82-27772
ALTITUDE SICKNESS
  Phenytoin - Ineffective against acute mountain sickness
    A82-26231
ALTITUDE TESTS
  Probability of caisson disease after pressure drop from 840 to 308 mm Hg
    N82-20835
ALTITUDE TOLERANCE
  Elevation of hypoxia tolerance under the influence of prolonged fasting
    A82-25679
  Cardiorespiratory assessment of 24-hour crash-diet effects on altitude, +Gz, and fatigue tolerances
    A82-26228
  Mechanism for the antihypoxic effects of depakin
    A82-27761
  Altitude and hypoxia as phase shift inducers --- of human circadian rhythms
    A82-28480
AMBIENT TEMPERATURE
  Effects of high ambient temperature on athlete adaptation to muscular activity
    A82-25706
  Trace reactions and the ambient temperature --- organism, organ and tissue thermoregulatory reactions
    A82-28454
AMINO ACIDS
  A model for protocellular coordination of nucleic acid and protein syntheses
    A82-26583
  Copolyamino acid fractionation and protobiochemistry
    A82-26589
  Formation of peptides from amino acids by single or multiple additions of ATP to suspensions of nucleoproteinoid microparticles
    A82-26597
  Amino acid codes in mitochondria as possible clues to primitive codes
    A82-28227
ANALGESIA
  The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration
    A82-25721
ANATOMY
  Pathological anatomy and ultrastructure of the heart /Combined morphological investigation of the general pathological process in the myocardium/ --- Russian book
    A82-26525
  HOMSIM: A simulator of three-dimensional hominoid dynamics
    [CSIR-SR-SWISK-23] N82-20879
ANESTHESIA
  The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration
    A82-25721
  Equipment for artificial pulmonary ventilation and inhalation anesthesia
    A82-25822
ANGIOGRAPHY
  The use of ultrasonic Doppler techniques in the diagnosis of arterial occlusions in the basis cerebri - A Doppler angiography study
    A82-27756
ANIMALS
  The influence of the type of trophic interactions on the dynamics of a two-level ecosystem
    A82-25803
ANNUAL VARIATIONS
  The influence of the seasonal factor and the intensity of work on the basic physiological functions of agricultural workers
    A82-25685
ANOXIA
  Kinetics of lipid peroxidation in cellular organelle anoxia under different conditions
    A82-25809
  The sensitivity of silent and spontaneously active cat cerebral cortex neurons to anoxia
    A82-26751
ANTARCTIC REGIONS
  Microbial ecology of extreme environments: Antarctic dry valley yeasts and growth in substrate limited habitats
    [NASA-CR-168742] N82-21869
ANTHROPOMETRY
  Female and male size, strength and performance: A review of current literature
    [AD-A109270] N82-20860
  A comparison of RAF and Italian aircrew: Anthropometric data
    [RAE-TR-FS-367] N82-20882
  Anthropometric profile of the British car occupant
    [MIRA-1979/2] N82-21904
ANTICHOLINERGICS
  A comparison of the antimuscarinic properties of aprophen with those of some other anticholinergic drugs
    [SRL-R-794] N82-21877
ANTICOAGULANTS
  Age-related features of blood-coagulation changes in the treatment of cerebral ischemias with indirect-action anticoagulants
    A82-27754
ANTIHISTAMINICS
  The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration
    A82-25721
ANTIOXIDANTS
  Evaluation of the antioxidant system of the body
    A82-25709

ANTIRADIATION DRUGS
The effectiveness of various radio-protective agents in protecting the germ cells of male mice against the genetic effects of radiation. II - The incidence of reciprocal translocations in irradiated spermatogonia
A82-25681
The indication of radiation resistance modified by radio-protective agents. III - Analysis of the relationship between hypoxic and radio-protective effects in the rat bone marrow for hypoxias of different origin
A82-25682
The therapeutic application of heterologous serum globulin against the acute radiation sickness of mice
A82-25684
Effect of radioprotective agents on reactivity to space flight factors
N82-20835

ARCTIC REGIONS
Diurnal rhythm of sleep and wakefulness in arctic suslik /Citellus parryi/ during summer season
A82-25823
Physiological, hygienic and psychological questions in the adaptation of sailors to conditions of year-round arctic navigation
A82-27805

ARID LANDS
Seasonal vascular tension variations in patients with cerebral circulatory disorders under the conditions of an arid zone
A82-25715

ARM (ANATOMY)
Final-position of a single degree-of-freedom tendon arm
A82-25619
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness
A82-25804

ARRHYTHMIA
The diving response in clinical medicine
A82-26241
Post-acceleration chaotic atrial rhythm
A82-28488

ARTERIES
Response of the cat femoral artery to increased circulation rate
A82-25712
Oxygen, carbon dioxide and the calcium control of relaxation mechanisms in cerebral artery smooth muscles
A82-26754
The effects of systemic arterial and venous pressures on blood volume in the cerebral vessels
A82-26755
Arterial CO2 response to low levels of inspired CO2 in awake beagle dogs
A82-26815
Stenoses of the carotid artery and disorders of the cerebral circulation /clinical and angiographic comparisons/
A82-27752
The use of ultrasonic Doppler techniques in the diagnosis of arterial occlusions in the basis cerebri - A Doppler angiography study
A82-27756
Incidence of ischemic heart disease and arterial hypertension in sedentary workers
A82-27793

ARTIFICIAL INTELLIGENCE
Symbolic reasoning among 3-D models and 2-D images
[AD-A110316]
N82-21881
An overview of artificial intelligence and robotics. Volume 2: Robotics
[NASA-CR-168727]
N82-21896

ASBESTOS
Testing and evaluation of the US Navy supplied air suit
[LA-8727-MS]
N82-20877

ASTHMA
Hemodynamics and external respiration in patients with bronchial asthma at rest and during exercise
A82-27791
Effects of physical factors in the environments on the diurnal and seasonal periodicity of bronchial asthma attacks
A82-27795

ASTRONAUT TRAINING
Scientific-technical and organizational problems of cosmonaut training
A82-27503

ASYMMETRY
Correlation between individual distinctions of functional asymmetry of cerebral hemispheres and pilot performance
N82-20844
Significance of vestibular asymmetry to genesis of vestibular dysfunction
N82-20850

ATHLETES
Expenditure of energy and the state of the neuromuscular system in athletes who use low-calorie diets to control their weight
A82-25688
Effects of high ambient temperature on athlete adaptation to muscular activity
A82-25706
Impairment of orthostatic posture regulation in boxers following closed craniocerebral injury
A82-25710
Thyroid and hypophysial thyrotropic function in athletes during bicycle ergometer exercise
A82-25716
Effects of periodization in the yearly training cycle on cardiac volume in young athletes
A82-27779
A model of the dynamics of athlete condition during the yearly cycle and its role in the management of training
A82-27780
The determination of overall physical endurance in athletes
A82-27781

ATMOSPHERIC COMPOSITION
Cabin ozone and tropopause definition
N82-21151

ATMOSPHERIC MOISTURE
Indicators of the erythrocytic system of rabbits in hot, humid climates
A82-25813

ATROPHY
Recovery time course in contractile function of fast and slow skeletal muscle after hindlimb immobilization
A82-26816

ATROPINE
A comparison of the antimuscarinic properties of aprophen with those of some other anticholinergic drugs
[NBL-R-794]
N82-21877

ATTITUDE (INCLINATION)
Evidence for a boundary effect in roll vection
A82-28500

AUDIOLOGY
Ultrastructural organization of AI and AIV zone projections of the cat auditory cortex to the posterior colliculi of the tectum opticum
A82-25718

AUDITORY DEFECTS
Potential for interaction of low-level impulse and continuous noise
[AD-A109430]
N82-21883

AUDITORY FATIGUE
Effect of white noise on the auditory cortex ultrastructure in rats
A82-25711
Effects of acoustic stress on rat sensorimotor cortex morphology
A82-27765

AUDITORY PERCEPTION
Investigation of the mechanism of auditory adaptation by the simultaneous recording of auditory evoked potentials of the brain and neurotropic potentials of the cochlea
A82-25714

AUDITORY STIMULI
Neurophysiological basis for determining the biological significance of acoustic stimuli
A82-25719

AUDITORY TASKS
Increase in jammed word intelligibility due to training of listeners
A82-26235

AUTOMATIC CONTROL
Model of the mechanism of the regulation of the human cardiovascular system. I - Concerning the heart-regulation mechanism A82-26799
Display-control compatibility in 3-D displays. 1: Effects of orientation [AD-A109491] N82-20875
A study of interactive control scheduling and economic assessment for robotic systems [NASA-CR-168652] N82-20878
Guidelines for man-machine interface design [VTT-RR-23/81] N82-21906
AUTOMATIC FLIGHT CONTROL
Cockpit automation and workload reduction - Too much of a good thing A82-26047
AUTONOMIC NERVOUS SYSTEM
The nature of autonomic effects produced by sombrevin --- during narcosis A82-25693
The diving response in clinical medicine A82-26241
The content of RNA in structures of the autonomic nervous system of rabbits under acute emotional stress A82-27759
AXIAL LOADS
Physical testing of polymers for use in circulatory assist devices [PB82-127069] N82-21888
AXIAL STRAIN
Physical testing of polymers for use in circulatory assist devices [PB82-127069] N82-21888

B

BACK INJURIES
F/FB-111 ejection experience (1967-1980). Part 1: Evaluation and recommendations [AD-A110199] N82-21879
BACTERIA
Determination of the bacterial endotoxin content of the blood of irradiated animals and humans A82-25708
Patterns of bacterioplankton growth in the sea N82-20860
Genetic engineering possibilities for CELSS: A bibliography and summary of techniques [NASA-CR-166306] N82-20876
Primary light-harvesting system: Phycobilisomes and associated membranes [DE81-028326] N82-21874
Aspects of the body's defence mechanisms as protection against biological agents --- used in biological warfare [DRIC-T-6433] N82-21886
BACTERICIDES
The bactericidal activity of various clothing fabrics and dressing materials A82-27801
A method for the determination of the antimicrobial activity of clothing fabrics A82-27803
BANDPASS FILTERS
Expansion of the experimental possibilities of evaluating cardiac output by means of integral rheography using a high-pass filter A82-25677
BARORECEPTORS
Modulation of human sinus node function by systemic hypoxia A82-26812
BIBLIOGRAPHIES
Environmental and health aspects of chloroform: A comprehensive bibliography of published literature, 1930 - 1981 [PB82-110115] N82-20870
Genetic engineering possibilities for CELSS: A bibliography and summary of techniques [NASA-CR-166306] N82-20876
BIOACOUSTICS
Evaluation of certain indices used in experimental and field conditions to detect the effects of noise A82-25703
Neurophysiological basis for determining the biological significance of acoustic stimuli A82-25719
Potential for interaction of low-level impulse and continuous noise [AD-A109430] N82-21883
BIOASTRONAUTICS
Problems of the development of life support and safety assurance system for space crews A82-27510
USSR Report: Space biology and aerospace medicine, volume 16, no. 1, January - February 1982 [JPRS-80323] N82-20834
Results of studies of cosmonauts' vestibular function and spatial perception N82-20838
Ion regulating function of human kidneys during long-term space flights and in model studies N82-20840
Structural and functional properties, and energy metabolism of erythrocytes during space flights varying in duration N82-20841
Relationship between microflora and immunity of cosmonauts carrying staphylococcus aureus in the nasal cavity N82-20843
BIOCHEMISTRY
Evaluation of the antioxidant system of the body A82-25709
Effects of whole-body vibration and noise on the toxicity and risk parameters of chemical substances A82-25814
Physiological, biochemical, and performance responses to a 24-hour crash diet A82-26229
Copolyamino acid fractionation and protobiochemistry A82-26589
The interaction of alpha-actinin and tropomyosin with F-actin A82-27727
The magnetic susceptibility of rhodopsin A82-27729
Physical model of the initial stages of energy transformation during oxidative phosphorylation A82-27730
Phosphorylating oxidation during changes in physiological condition A82-27762
Body composition data from the rat subjects of Cosmos 1129 experiment K-316 [NASA-CR-168678] N82-20832
BIOCLIMATOLOGY
Population mechanisms of adapting to extreme environmental conditions /with Clethrionomys glareolus Schreb considered as an example/ A82-25692
Seasonal vascular tension variations in patients with cerebral circulatory disorders under the conditions of an arid zone A82-25715
Indicators of the erythrocytic system of rabbits in hot, humid climates A82-25813
Results of the treatment of patients with chronic bronchitis at health resorts in contrasting climatic zones during different seasons A82-25825
Effects of physical factors in the environments on the diurnal and seasonal periodicity of bronchial asthma attacks A82-27795
BIOCONTROL SYSTEMS
Final-position of a single degree-of-freedom tendon arm A82-25619
Corrective saccades - Effect of shifting the saccade goal A82-25647
Comments on the theory for the accuracy of rapid motor acts of Schmidt et al A82-25691
The participation of estradiol and progesterone in animal body mass regulation mechanisms A82-25801
Regulation of heart rhythm in depressor baroreflex A82-25812

Model of the mechanism of the regulation of the human cardiovascular system. I - Concerning the heart-regulation mechanism A82-26799

Electromyographic pattern of muscular activity during pushing-off and methods for its directed correction in young ski-jumpers on a trampoline A82-27776

BIODEGRADATION

Fifth International Biodeterioration Symposium [AD-A109858] N82-20833

BIODYNAMICS

The influence of the type of trophic interactions on the dynamics of a two-level ecosystem A82-25803

Diffusion model of the dynamics of initial fibroblast attachment A82-27740

A model of the dynamics of athlete condition during the yearly cycle and its role in the management of training A82-27780

F/FB-111 ejection experience (1967-1980). Part 1: Evaluation and recommendations [AD-A110199] N82-21879

Physical testing of polymers for use in circulatory assist devices [PB82-127069] N82-21888

BIOELECTRIC POTENTIAL

Intracellular local changes in resistance in muscle fibers as a function of membrane potential A82-27736

BIOELECTRICITY

Intraretinal recordings of slow electrical responses to steady illumination in monkey - Isolation of receptor responses and the origin of the light peak A82-25649

Dynamics of brain cell oxygen tension and electrical activity in the norm and in hypoxia A82-25670

The sensitivity of silent and spontaneously active cat cerebral cortex neurons to anoxia A82-26751

Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress A82-27731

BIOENGINEERING

Bioengineering approach to the study of the oculomotor apparatus of the human visual analyzer A82-26790

Female and male size, strength and performance: A review of current literature [AD-A109270] N82-20868

Genetic engineering possibilities for CELSS: A bibliography and summary of techniques [NASA-CR-166306] N82-20876

BIOGEOCHEMISTRY

Microbial ecology of extreme environments: Antarctic dry valley yeasts and growth in substrate limited habitats [NASA-CR-168782] N82-21869

BIOINSTRUMENTATION

Expansion of the experimental possibilities of evaluating cardiac output by means of integral rheography using a high-pass filter A82-25677

Instrumentation simultaneously measuring carbon dioxide excretion and oxygen uptake in humans using titration methods A82-26819

NMR-imagery - A new method of biophysical investigation A82-27745

Ultrasonic method for measuring of hepatic portal blood flow in rats under conditions of contact biomicroscopy A82-27760

Suction-type EKG electrodes with a remote vacuum pump for stress testing A82-27800

A practical ultrasonic plethysmograph A82-28486

Mobility aid for the blind [NASA-CR-168731] N82-21894

BIOLOGICAL EFFECTS

Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis A82-26602

Recovery time course in contractile function of fast and slow skeletal muscle after hindlimb immobilization A82-26816

Athermal submillimeter-microwave biological effects A82-26865

Microdosimetric analysis of the variability of radiobiological effects in experiments with high-energy radiation --- in space A82-27810

The dynamics of rat bone marrow CFUc content during prolonged fractionated irradiation A82-27811

Higher plant response to elevated ultraviolet irradiance [NASA-CR-167538] N82-20828

The ultraviolet radiation environment of pollen and its effect on pollen germination N82-20829

Protective mechanisms and acclimation to solar ultraviolet-B radiation in Oenothera stricta N82-20830

Action spectra for photosynthetic inhibition N82-20831

A quantitative analysis of transcutaneous oxygen measurement N82-20862

Environmental and health aspects of chloroform: A comprehensive bibliography of published literature, 1930 - 1981 [PB82-110115] N82-20870

The effects of underwater explosions on marine life in Shoalwater Bay, Queensland [MRL-R-795] N82-21872

BIOLOGICAL EVOLUTION

Copolyamino acid fractionation and protobiochemistry A82-26589

Properties of stable dissipative structures in mathematical models of morphogenesis A82-27741

The role of membrane structures in the formation of the myofibrillar system in myogenesis A82-27743

How life began --- international symposium A82-28094

Symbiosis in cell evolution: Life and its environment on the early earth --- Book A82-28113

Molecular relationships between closely related strains and species of nematodes A82-28228

Comparative biosequence metrics --- molecular evolution A82-28230

The current status of REH theory --- Random Evolutionary Hits in biological molecular evolution A82-28231

Life in the Universe [NASA-CP-2156] N82-20804

BIOLOGICAL MODELS (MATHEMATICS)

Comments on the theory for the accuracy of rapid motor acts of Schmidt et al A82-25691

The influence of the type of trophic interactions on the dynamics of a two-level ecosystem A82-25803

Theoretical and experimental analysis of material turnover in a closed microecosystem. I - Construction of a mathematical model A82-25821

Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change A82-27561

A bilocal model of a dissipative structure --- in ecosystems A82-27726

The possible role of hydrogen bonds in the mechanism of muscular contraction A82-27734

Diffusion model of the dynamics of initial fibroblast attachment A82-27740

Properties of stable dissipative structures in mathematical models of morphogenesis A82-27741

Central pain mechanisms A82-27788

Mathematical modeling of microhemodynamics in the resistant part of the regional vascular bed A82-27790

Mathematical modeling and analysis of death dynamics in irradiated mouse populations A82-27809

Some neurophysiological correlates of visual perception A82-28455

BIOLOGY
Physics and biology --- developments in biophysics A82-26550

BIOMAGNETISM
The magnetic susceptibility of rhodopsin A82-27729

/H-3/-noradrenaline release potentiated in a clonal nerve cell line by low-intensity pulsed magnetic fields A82-28099

BIOMEDICAL DATA
Problems of the operational medical in-flight monitoring of pilots A82-27768

Seventy-five days in space --- technical and medico-biological experiments A82-27773

A diagram for rapid analysis of albino rat electrocardiograms A82-27807

Ultrasonic blood flow imaging using correlation processing N82-20861

BIOMETRICS
Reflexometry as an additional method of investigating hypoactivity in the thyroid gland A82-25802

The accuracy of laser diffraction measurements of sarcomere lengths in contracting muscles A82-27737

Comprehensive evaluation of the human functional state using ergometry A82-27804

Significance of bone density to spinal trauma related to pilot ejection N82-20849

BIONICS
Final-position of a single degree-of-freedom tendon arm A82-25619

Research and development of a versatile portable speech prosthesis [NASA-CR-168741] N82-21897

BIOPHYSICS
Biophysical methods for the study of ecosystems and the control of biosynthesis within them A82-25820

Physics and biology --- developments in biophysics A82-26550

A bilocal model of a dissipative structure --- in ecosystems A82-27726

Model of a 'two-headed' myosin cross-bridge and the possibility of its motion in skeletal muscles A82-27735

NMR-imagery - A new method of biophysical investigation A82-27745

BIOSYNTHESIS
Biophysical methods for the study of ecosystems and the control of biosynthesis within them A82-25820

Molecular events basic to cellular radiation response [DE81-029813] N82-21075

BIOTECHNOLOGY
Fabrication of cardiovascular devices [PB82-120148] N82-20869
Mobility aid for the blind [NASA-CR-168731] N82-21894

BIOTELEMETRY
Problems of the operational medical in-flight monitoring of pilots A82-27768

BLINDNESS
Mobility aid for the blind [NASA-CR-168731] N82-21894

BLOOD
Determination of the bacterial endotoxin content of the blood of irradiated animals and humans A82-25708

Serotonin and histamine metabolism in cosmonauts N82-20858

BLOOD CIRCULATION
Response of the cat femoral artery to increased circulation rate A82-25712

Structural and functional organization of the microcirculatory bed in skeletal muscle A82-27749

The participation of adrenergic mechanisms in microcirculation changes under stress A82-27757

Contribution of the kallikrein-kinin system to microcirculation disorders in the case of immobilization stress A82-27787

Positive pressure breathing as a means of preventing adverse reactions to antiorthostatic position N82-20842

BLOOD COAGULATION
Coagulopathy in miners with vibration sickness A82-25704

Age-related features of blood-coagulation changes in the treatment of cerebral ischemias with indirect-action anticoagulants A82-27754

BLOOD FLOW
Cerebral hemodynamics in healthy individuals and the recognition of subclinical signs of insufficient blood supply to the brain A82-27751

Ultrasonic method for measuring of hepatic portal blood flow in rats under conditions of contact biomicroscopy A82-27760

Ultrasonic blood flow imaging using correlation processing N82-20861

A quantitative analysis of transcutaneous oxygen measurement N82-20862

BLOOD PLASMA
Catecholamine content of rat blood after flight aboard Cosmos-936 biosatellites N82-20855

BLOOD PRESSURE
The effects of systemic arterial and venous pressures on blood volume in the cerebral vessels A82-26755

BLOOD PUMPS
Fabrication of cardiovascular devices [PB82-120148] N82-20869

BLOOD VESSELS
Structural and functional organization of the microcirculatory bed in skeletal muscle A82-27749

A study of cerebral microvessels by means of automatic image analysis A82-27766

The information content of indicators of cerebral vascular responses to adequate influences A82-28459

BLOOD VOLUME
The effects of systemic arterial and venous pressures on blood volume in the cerebral vessels A82-26755

BODY FLUIDS
Evidence for the involvement of central alpha2 mechanisms in intrathoracic volume expansion-induced diuresis - A study with clonidine and propranolol A82-28481

BODY MEASUREMENT (BIOLOGY)
Female and male size, strength and performance: A review of current literature [AD-A109270] N82-20868

Measurement of the headband force of circumaural hearing protectors
[RAE-TM-FS-378] N82-21901
Anthropometric profile of the British car occupant
[MIRA-1979/2] N82-21904

BODY SIZE (BIOLOGY)
Anthropometric profile of the British car occupant
[MIRA-1979/2] N82-21904

BODY TEMPERATURE
The physiology and hygiene of the individual protection of man from the cold --- Russian book
A82-26522

BODY WEIGHT
Expenditure of energy and the state of the neuromuscular system in athletes who use low-calorie diets to control their weight
A82-25608
The participation of estradiol and progesterone in animal body mass regulation mechanisms
A82-25801
Physiological, biochemical, and performance responses to a 24-hour crash diet
A82-26229

BONE MARROW
The indication of radiation resistance modified by radio-protective agents. III - Analysis of the relationship between hypoxic and radio-protective effects in the rat bone marrow for hypoxias of different origin
A82-25682
The dynamics of rat bone marrow CFUc content during prolonged fractionated irradiation
A82-27811
Role of immobilization of irradiated rats in the protective effect of bone marrow shielding
[NASA-TM-76828] N82-21866

BONES
Significance of bone density to spinal trauma related to pilot ejection
N82-20849
F/FB-111 ejection experience (1967-1980). Part 1: Evaluation and recommendations
[AD-A110199] N82-21879

BORATES
Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes
A82-27744

BOREDOM
Development of the hypothesis of the system quantization of behavior with reference to human work activity --- monotonous conveyor-belt task
A82-27798

BOTANY
Genetic engineering possibilities for CELSS: A bibliography and summary of techniques
[NASA-CR-166306] N82-20876

BRADYCARDIA
Modulation of human sinus node function by systemic hypoxia
A82-26812

BRAIN
Dynamics of brain cell oxygen tension and electrical activity in the norm and in hypoxia
A82-25678
A psychophysiological analysis of the sensory changes undergone by humans in adapting to new climatic and geographic conditions
A82-25694
Investigation of the mechanism of auditory adaptation by the simultaneous recording of auditory evoked potentials of the brain and neurotropic potentials of the cochlea
A82-25714
Nutrients that modify brain function
A82-25722
Changes in the level of catecholamines in the noradrenaline-synthesizing structures of the rat brain following immobilization
A82-27764
A comparison of the antimuscarinic properties of aprophen with those of some other anticholinergic drugs
[MRL-R-794] N82-21877

BRAIN CIRCULATION
Some characteristics of cardiovascular system activity and adaptive antihypoxic mechanisms in keyboard computer operators during the course of a work shift
A82-25705
Seasonal vascular tension variations in patients with cerebral circulatory disorders under the conditions of an arid zone
A82-25715
Systemic brain activity /Experimental investigation/ --- Russian book
A82-26547
Oxygen, carbon dioxide and the calcium control of relaxation mechanisms in cerebral artery smooth muscles
A82-26754
The effects of systemic arterial and venous pressures on blood volume in the cerebral vessels
A82-26755
Cerebral hemodynamics in healthy individuals and the recognition of subclinical signs of insufficient blood supply to the brain
A82-27751
Stenoses of the carotid artery and disorders of the cerebral circulation /clinical and angiographic comparisons/
A82-27752
Bilateral disturbances of the perception function of the brain in patients with unilateral disorders due to acute disturbances of the cerebral circulation
A82-27753
Rheoencephalographic signs of inadequate cerebral blood supply in incipient cerebrovascular insufficiency
A82-27755
The use of ultrasonic Doppler techniques in the diagnosis of arterial occlusions in the basis cerebri - A Doppler angiography study
A82-27756
A study of cerebral microvessels by means of automatic image analysis
A82-27766
Mechanisms for the adaptive and trophic effects of the sympathetic nervous system on cerebral vessels and tissue
A82-28458
The information content of indicators of cerebral vascular responses to adequate influences
A82-28459

BRAIN DAMAGE
Impairment of orthostatic posture regulation in boxers following closed craniocerebral injury
A82-25710
Bilateral disturbances of the perception function of the brain in patients with unilateral disorders due to acute disturbances of the cerebral circulation
A82-27753

BRAZIL
Studies on the flight medical aspects of the German Lufthansa non-stop route from Frankfurt to Rio de Janeiro, part 1
[NASA-TM-76659] N82-20863

BREATHING
Physiological criteria and methods for increasing the effectiveness of correction of hypoxic states
A82-27797

BREATHING APPARATUS
Equipment for artificial pulmonary ventilation and inhalation anesthesia
A82-25822

BRONCHI
Results of the treatment of patients with chronic bronchitis at health resorts in contrasting climatic zones during different seasons
A82-25825
Effects of physical factors in the environments on the diurnal and seasonal periodicity of bronchial asthma attacks
A82-27795

C

CABIN ATMOSPHERES
The wearing of hydrophilic contact lenses aboard a commercial jet aircraft. I - Humidity effects on fit
A82-26230
A review of aircraft cabin conditioning for operations in Australia
[AD-A109004] N82-20880
Cabin ozone and tropopause definition
N82-21151

CALCIUM METABOLISM
Damage to the Ca/2+/-transporting system in the sarcoplasmic reticulum of the heart during emotional and nociceptive stress
A82-25810
Oxygen, carbon dioxide and the calcium control of relaxation mechanisms in cerebral artery smooth muscles
A82-26754
The role of calcium in the activity of the smooth muscles of the pulmonary veins
A82-26756

CALORIC REQUIREMENTS
Expenditure of energy and the state of the neuromuscular system in athletes who use low-calorie diets to control their weight
A82-25688

CAPILLARIES (ANATOMY)
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness
A82-25804

CARBOHYDRATE METABOLISM
Effects of increased carbohydrate resources on aerobic work capacity /Carbohydrate loading method/
A82-27777

CARBON DIOXIDE CONCENTRATION
Instrumentation simultaneously measuring carbon dioxide excretion and oxygen uptake in humans using titration methods
A82-26819

CARBONACEOUS CHONDRITES
Basic nitrogen-heterocyclic compounds in the Murchison meteorite
A82-28284

CARCINOGENS
National toxicology program
[GPO-85-397] N82-20865

CARDIOGRAMS
The prognostic significance of electrocardiotopogram parameters in macrofocal myocardial infarction
A82-27783

CARDIOLOGY
Computer analysis of tests involving physical stress --- in cardiology
A82-25807
Pathological anatomy and ultrastructure of the heart /Combined morphological investigation of the general pathological process in the myocardium/ --- Russian book
A82-26525

CARDIOVASCULAR SYSTEM
The nature of autonomic effects produced by sombrevin --- during narcosis
A82-25693
Some characteristics of cardiovascular system activity and adaptive antihypoxic mechanisms in keyboard computer operators during the course of a work shift
A82-25705
The significance of the pulmonary gas-exchange response in physical exercise testing for the evaluation of the effectiveness of mitral commissurotomy
A82-25805
Model of the mechanism of the regulation of the human cardiovascular system. I - Concerning the heart-regulation mechanism
A82-26799
Structural and functional organization of the microcirculatory bed in skeletal muscle
A82-27749

Stenoses of the carotid artery and disorders of the cerebral circulation /clinical and angiographic comparisons/
A82-27752
The determination of overall physical endurance in athletes
A82-27781
Tissue chemoreceptors
A82-28453
Relationship of personality factors and some social habits to cardiovascular risk in submariners
A82-28407
Body composition data from the rat subjects of Cosmos 1129 experiment K-316
[NASA-CR-168678] N82-20832
Physical testing of polymers for use in circulatory assist devices
[PB82-127069] N82-21088

CAROTID SINUS REFLEX
Modulation of human sinus node function by systemic hypoxia
A82-26812

CATALYSIS
Formation of peptides from amino acids by single or multiple additions of ATP to suspensions of nucleoproteinoid microparticles
A82-26597

CATECHOLAMINE
The effect of adapting to high-altitude hypoxia on certain indicators of catecholamine metabolism in rats in the case of spontaneous hereditary hypertension
A82-27758
Changes in the level of catecholamines in the noradrenaline-synthesizing structures of the rat brain following immobilization
A82-27760
Catecholamine content of rat blood after flight aboard Cosmos-936 biosatellites
N82-20855

CELLS (BIOLOGY)
Dynamics of brain cell oxygen tension and electrical activity in the norm and in hypoxia
A82-25678
Models for protocellular photophosphorylation
A82-26596
Intracellular local changes in resistance in muscle fibers as a function of membrane potential
A82-27736
Symbiosis in cell evolution: Life and its environment on the early earth --- Book
A82-28113
Effects of space flight factors at the cellular level - Results of the Cytos experiment
A82-28485
Molecular events basic to cellular radiation response
[DE81-029813] N82-21075

CENTRAL NERVOUS SYSTEM
Some mechanisms of central inhibition
A82-28456

CENTRIFUGING STRESS
G-tolerance enhancement - Straining ability comparison of aircrewmen, nonaircrewmen, and trained centrifuge subjects
A82-26233

CEREBRAL CORTEX
Dynamics of brain cell oxygen tension and electrical activity in the norm and in hypoxia
A82-25678
Effect of white noise on the auditory cortex ultrastructure in rats
A82-25711
Ultrastructural organization of AI and AIV zone projections of the cat auditory cortex to the posterior colliculi of the tectum opticum
A82-25718
The sensitivity of silent and spontaneously active cat cerebral cortex neurons to anoxia
A82-26751
Effects of acoustic stress on rat sensorimotor cortex morphology
A82-27765
Mechanisms for the adaptive and trophic effects of the sympathetic nervous system on cerebral vessels and tissue
A82-28458

CEREBRAL VASCULAR ACCIDENTS
Seasonal vascular tension variations in patients with cerebral circulatory disorders under the conditions of an arid zone
A82-25715
Rheoencephalographic signs of inadequate cerebral blood supply in incipient cerebrovascular insufficiency
A82-27755
CEREBRUM
Cerebral hemodynamics in healthy individuals and the recognition of subclinical signs of insufficient blood supply to the brain
A82-27751
Age-related features of blood-coagulation changes in the treatment of cerebral ischemias with indirect-action anticoagulants
A82-27754
Correlation between individual distinctions of functional asymmetry of cerebral hemispheres and pilot performance
N82-20844
CHEMICAL COMPOSITION
Changes in contractile protein composition and properties following space flight
A82-27728
CHEMICAL EVOLUTION
Copolyamino acid fractionation and protobiochemistry
A82-26509
Formation of pyrophosphate, tripolyphosphate, and phosphorylimidazole with the thioester, N, S-diacetylcysteamine, as the condensing agent --- molecular evolution
A82-28229
The current status of REB theory --- Random Evolutionary Bits in biological molecular evolution
A82-28231
Life in the Universe
[NASA-CP-2156] N82-20884
CHEMICAL WARFARE
Aspects of the body's defence mechanisms as protection against biological agents --- used in biological warfare
[DRIC-T-6433] N82-21806
Evaluation of the NBC overgarments manufactured by Seyntex Belgium --- chemical warfare
[PML-1980-33] N82-21905
CHEMORECEPTORS
The significance of chemoreceptor stimuli for the rate of switch-on and switch-off of the respiratory response to physical exercise
A82-25713
Modulation of human sinus node function by systemic hypoxia
A82-26012
Arterial CO2 response to low levels of inspired CO2 in awake beagle dogs
A82-26015
Tissue chemoreceptors
A82-28453
CHLOROFORM
Environmental and health aspects of chloroform: A comprehensive bibliography of published literature, 1930 - 1981
[PB82-110115] N82-20870
CHLOROPHYLLS
Antenna form of photosystem-2 chlorophyll in chloroplasts
A82-27730
Participation of pheophytin in primary electron transfer processes in the reaction centers of photosystem II --- photoreduction reactions of chlorophyll derivative
A82-27746
CHLOROPLASTS
Antenna form of photosystem-2 chlorophyll in chloroplasts
A82-27730
CHOLINE
Nutrients that modify brain function
A82-25722
CHROMOSOMES
Mitotic activity and chromosome aberrations in the regenerated liver of rats after irradiation by X rays
A82-25811
CHRONIC CONDITIONS
Characteristics of oxygen metabolism in patients with chronic ischemic heart disease during physical exercise
A82-25806
The combined use of sulfamonomethoxine and UV radiation in the treatment of chronic pneumonia
A82-25808
Results of the treatment of patients with chronic bronchitis at health resorts in contrasting climatic zones during different seasons
A82-25825
CIRCADIAN RHYTHMS
Diurnal rhythm of sleep and wakefulness in arctic suslik /Citellus parryi/ during summer season
A82-25823
The effect of the circadian rhythm of physiological functions on the mental work capacity of operators
A82-27769
Daily rhythms of physiological functions during shift work
A82-27771
Altitude and hypoxia as phase shift inducers --- of human circadian rhythms
A82-28480
CIVIL AVIATION
Conductors of the airways --- air traffic controllers
A82-27812
CLIMATE
Population mechanisms of adapting to extreme environmental conditions /with Clethrionomys glareolus Schreb considered as an example/
A82-25692
A psychophysiological analysis of the memory changes undergone by humans in adapting to new climatic and geographic conditions
A82-25694
Recording basic climatic parameters and their processing into integrated heat stress indices
[DRIC-T-6292] N82-21885
CLINICAL MEDICINE
Basic principles of hypoxia control during shock
A82-25676
Clinical characteristics of neurotic disorders in female long-distance telephone operators
A82-25697
Clinical and epidemiologic analysis of ischemic ECG responses to physical exercise in males
A82-25707
The combined use of sulfamonomethoxine and UV radiation in the treatment of caronic pneumonia
A82-25808
Clinical and experimental evidence for the use of hypothermia in decompression sickness
A82-26239
Electroacupuncture in the complex treatment of trifacial neuralgia
A82-27775
The norm and pathology in sports
A82-27782
Use of a constant magnetic field for the treatment of vibration sickness
A82-27796
CLOSED ECOLOGICAL SYSTEMS
Theoretical and experimental analysis of material turnover in a closed microecosystem. I - Construction of a mathematical model
A82-25821
Genetic engineering possibilities for CELSS: A bibliography and summary of techniques
[NASA-CR-166306] N82-20876
Sensitivity analysis as an aid in modelling and control of (poorly-defined) ecological systems --- closed ecological systems
[NASA-CR-166308] N82-21095
CLOTHING
Use of mathematical modeling for the determination of allowable quantities of chemical fibers in clothing
A82-25818
The bactericidal activity of various clothing fabrics and dressing materials
A82-27801
A method for the determination of the antimicrobial activity of clothing fabrics
A82-27803

COASTAL ECOLOGY
The effects of underwater explosions on marine life in Shoalwater Bay, Queensland
[MRL-R-795] N82-21872

COCHLEA
Investigation of the mechanism of auditory adaptation by the simultaneous recording of auditory evoked potentials of the brain and neurotropic potentials of the cochlea
A82-25714

Potential for interaction of low-level impulse and continuous noise
[AD-A109430] N82-21883

COCKPITS
Cockpit automation and workload reduction - Too much of a good thing
A82-26047

COGNITIVE PSYCHOLOGY
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[BPN-1/81] N82-21893

COLD ACCLIMATIZATION
Effect of low ambient temperatures on sleep-wakefulness periodicity in lemming /Dicrostonyx torquatus/
A82-25824

The physiology and hygiene of the individual protection of man from the cold --- Russian book
A82-26522

The state of alpha 1- and beta 1-adrenergic reactions upon cold acclimatization
A82-26752

Physiological, hygienic and psychological questions in the adaptation of sailors to conditions of year-round arctic navigation
A82-27805

COLD TOLERANCE
The possibility of maintaining the temperature and work capacity of the extremities
A82-27806

COLONIES
The dynamics of rat bone marrow CFUc content during prolonged fractionated irradiation
A82-27811

COLOR CODING
An evaluation of the effectiveness of color coded tactical symbology applied to military maps
[AD-A109675] N82-20872

COLOR VISION
Comparison of flicker-photometric and flicker-threshold spectral sensitivities while the eye is adapted to colored backgrounds
A82-28123

COMMAND AND CONTROL
Simplicity in command and control systems - A human factors consideration --- for man computer interface design
A82-27222

Models and mockups as design aids, revision A
[AD-A109511] N82-20881

COMMUNICATING
Sourcebook of temporal factors affecting information transfer from visual displays
[AD-A109907] N82-21880

COMMUNICATION EQUIPMENT
Models and mockups as design aids, revision A
[AD-A109511] N82-20881

COMPUTER ASSISTED INSTRUCTION
Pilot judgment - Training and evaluation
A82-26777

Computer-Managed Instruction in Navy Technical training: An attitudinal survey
[AD-A109664] N82-20871

COMPUTER GRAPHICS
Display-control compatibility in 3-D displays. 1: Effects of orientation
[AD-A109491] N82-20875

COMPUTER PROGRAMMING
An overview of artificial intelligence and robotics. Volume 2: Robotics
[NASA-CR-168727] N82-21896

COMPUTER SYSTEMS DESIGN
Simplicity in command and control systems - A human factors consideration --- for man computer interface design
A82-27222

COMPUTER TECHNIQUES
Computer analysis of tests involving physical stress --- in cardiology
A82-25807

A study of the human visual system in support of automated feature extraction
[AD-A109139] N82-20867

COMPUTER VISION
Relative depth and local surface orientation from image motions
[AD-A109565] N82-20873

Symbolic reasoning among 3-D models and 2-D images
[AD-A110316] N82-21881

Mobility aid for the blind
[NASA-CR-168731] N82-21894

COMPUTERIZED SIMULATION
HOMSIM: A simulator of three-dimensional hominoid dynamics
[CSIR-SR-SWISE-23] N82-20879

System simulation applied to the evaluation of displays for guidance and control
[ESA-TT-659] N82-20883

COMPUTERS
Some characteristics of cardiovascular system activity and adaptive antihypoxic mechanisms in keyboard computer operators during the course of a work shift
A82-25705

Display-control compatibility in 3-D displays. 1: Effects of orientation
[AD-A109491] N82-20875

CONDENSING
Formation of pyrophosphate, tripolyphosphate, and phosphorylimidazole with the thioester, N, S-diacetylcysteamine, as the condensing agent --- molecular evolution
A82-28229

CONDITIONED REFLEXES
Systemic brain activity /Experimental investigation/ --- Russian book
A82-26587

CONDITIONING (LEARNING)
Conditioned feeding suppression in rats produced by cross-coupled and simple motions
A82-26230

CONFERENCES
Fifth International Biodeterioration Symposium
[AD-A109858] N82-20833

Report on a visit to Canada of the 10-17 May 1980 Second International Symposium on Personal Hearing Protection in Industry --- affects of acoustic trauma
[RAE-TM-FS-377] N82-21900

CONFIDENCE
Subjective confidence in forecasts
[AD-A109730] N82-21890

CONGRESSIONAL REPORTS
National toxicology program
[GPO-85-397] N82-20865

CONTACT LENSES
The wearing of hydrophilic contact lenses aboard a commercial jet aircraft. I - Humidity effects on fit
A82-26234

CONTRACTION
Recovery time course in contractile function of fast and slow skeletal muscle after hindlimb immobilization
A82-26816

The accuracy of laser diffraction measurements of sarcomere lengths in contracting muscles
A82-27737

CONTROL THEORY
Mode of flight and a mathematical model of pilot activity relating to flight-vehicle control
A82-27513

COPOLYMERIZATION
Copolyamino acid fractionation and protobiochemistry
A82-26589

CORONARY CIRCULATION
Physical testing of polymers for use in circulatory assist devices
[PB82-127069] N82-21888

CORRELATION
Ultrasonic blood flow imaging using correlation processing
N82-20861

CORROSION PREVENTION
Settlement of fouling organisms at the [illegible] North Barnard Island raft site
[MRL-TN-450] N82-21870
Settlement of fouling organisms at the HMAS STIRLING raft site
[MRL-TN-461] N82-21871
COSMOLOGY
How life began --- international symposium
A82-28094
COSMONAUTS
Scientific-technical and organizational problems of cosmonaut training
A82-27503
Seventy-five days in space --- technical and medico-biological experiments
A82-27773
Serotonin and histamine metabolism in cosmonauts
N82-20858
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
[NASA-TM-76793] N82-20864
COST EFFECTIVENESS
Airline pilot disability - Economic impact of an airline preventive medicine program
A82-28409
CROSS SECTIONS
Method for the determination of muscle cross-sectional area and dermato-adipose layer thickness using ultrasonic scanning
A82-27770
CULTURE TECHNIQUES
The dynamics of rat bone marrow CFUc content during prolonged fractionated irradiation
A82-27011
Genetic engineering possibilities for CELSS: A bibliography and summary of techniques
[NASA-CR-166306] N82-20876
CYTOLOGY
Study of the initial stage of fibroblast attachment by means of reflective interference microscopy
A82-27739
Symbiosis in cell evolution: Life and its environment on the early earth --- Book
A82-28113
Effects of space flight factors at the cellular level - Results of the Cytos experiment
A82-28485

D

DAMAGE
Regeneration of skeletal muscle after mechanical trauma in reptiles
A82-27767
DATA PROCESSING
Recording basic climatic parameters and their processing into integrated heat stress indices
[DRIC-T-6292] N82-21085
DEATH
Mathematical modeling and analysis of death dynamics in irradiated mouse populations
A82-27009
DECISION MAKING
Guidelines for man-machine interface design
[VTT-SE-23/81] N82-21906
DECOMPRESSION SICKNESS
Clinical and experimental evidence for the use of hypothermia in decompression sickness
A82-26239
Probability of caisson disease after pressure drop from 840 to 308 mm Hg
N82-20835
DEGREES OF FREEDOM
Final-position of a single degree-of-freedom tendon arm
A82-25619
Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller
A82-25632
DENSITY (MASS/VOLUME)
Significance of bone density to spinal trauma related to pilot ejection
N82-20849
DEOXYRIBONUCLEIC ACID
Patterns of bacterioplankton growth in the sea
N82-20860
Microbial ecology of extreme environments: Antarctic dry valley yeasts and growth in substrate limited habitats
[NASA-CR-168742] N82-21869
DEPTH
Relative depth and local surface orientation from image motions
[AD-A109565] N82-20073
DETECTION
The transfer of failure-detection skills between monitoring and controlling dynamic systems
A82-26776
DETERIORATION
Fifth International Biodeterioration Symposium
[AD-A109858] N82-20833
DIAGNOSIS
Computer analysis of tests involving physical stress --- in cardiology
A82-25807
Follow-up of 14 abnormal electroencephalograms in asymptomatic U.S. Air Force Academy cadets
A82-26242
NMR-imagery - A new method of biophysical investigation
A82-27745
The use of ultrasonic Doppler techniques in the diagnosis of arterial occlusions in the basis cerebri - A Doppler angiography study
A82-27756
Bicycle ergometry in the differential diagnosis of cardialgia
A82-27792
DIAGRAMS
A diagram for rapid analysis of albino rat electrocardiograms
A82-27807
DIETS
Expenditure of energy and the state of the neuromuscular system in athletes who use low-calorie diets to control their weight
A82-25688
Cardiorespiratory assessment of 24-hour crash-diet effects on altitude, +Gz, and fatigue tolerances
A82-26228
Physiological, biochemical, and performance responses to a 24-hour crash diet
A82-26229
Dynamic of nutritional status during simulation of long-term aircraft flights
N82-20866
DIFFERENTIATION (BIOLOGY)
Hematopoietic tissue development in Japanese quail embryogenesis
A82-27748
DIFFRACTION PATTERNS
The accuracy of laser diffraction measurements of sarcomere lengths in contracting muscles
A82-27737
DIMERS
Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change
A82-27561
DIRECTIVITY
Display-control compatibility in 3-D displays. 1: Effects of orientation
[AD-A109491] N82-20075
DISASTERS
An introduction to disaster - Some considerations of a psychological nature
A82-26236
DISEASES
Connection of motor regimen with morbidity in workers
A82-25695
Coagulopathy in miners with vibration sickness
A82-25704
DISPLAY DEVICES
The evaluation of information display on the basis of the transinformation --- German book
A82-28394
An evaluation of the effectiveness of color coded tactical symbology applied to military maps
[AD-A109675] N82-20872

Display-control compatibility in 3-D displays. 1: Effects of orientation
[AD-A109491] N82-20875
System simulation applied to the evaluation of displays for guidance and control
[ESA-TT-659] N82-20883
Sourcebook of temporal factors affecting information transfer from visual displays
[AD-A109907] N82-21880
Perception of spatial features with stereoscopic displays
[AD-A110191] N82-21882
Human engineering guides to design of displays for underwater applications
[AD-A110317] N82-21888

DIURESIS
Evidence for the involvement of central alpha2 mechanisms in intrathoracic volume expansion-induced diuresis - A study with clonidine and propranolol
A82-28481

DIURNAL VARIATIONS
The effect of the circadian rhythm of physiological functions on the mental work capacity of operators
A82-27769
Daily rhythms of physiological functions during shift work
A82-27771

DIVING (UNDERWATER)
The diving response in clinical medicine
A82-26241
The contribution of V. N. Chernigovskii to the development of diving physiology and medicine
A82-28457
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[RPN-1/81] N82-21893

DOMINANCE
Correlation between individual distinctions of functional asymmetry of cerebral hemispheres and pilot performance
N82-20844

DOSIMETERS
Microdosimetric analysis of the variability of radiobiological effects in experiments with high-energy radiation --- in space
A82-27810

DROUGHT
Population mechanisms of adapting to extreme environmental conditions /with Clethrionomys glareolus Schreb considered as an example/
A82-25692

DRUGS
The nature of autonomic effects produced by sombrevin --- during narcosis
A82-25693
The combined use of sulfamonomethoxine and UV radiation in the treatment of chronic pneumonia
A82-25808
Mechanism for the antihypoxic effects of depakin
A82-27761
The extraction and identification of drugs in aviation toxicology
A82-28478
An examination of the feasibility of administering prophylactic pyridostigmine by the percutaneous route
[NBL-TR-449] N82-21878

E

EAR PROTECTORS
Report on a visit to Canada of the 10-17 May 1980 Second International Symposium on Personal Hearing Protection in Industry --- affects of acoustic trauma
[RAE-TM-FS-377] N82-21900
Measurement of the headband force of circumaural hearing protectors
[RAE-TM-FS-378] N82-21901
A test facility for the objective measurement of circumaural hearing protector attenuation
[RAE-TM-FS-379] N82-21902
The importance of ear-like couplers in the design of an objective test facility for the measurement of earmuff insertion loss
[RAE-TM-FS-380] N82-21903

EARDRUMS
Effect of flight on the Eustachian tube function and the tympanic membrane system - A follow-up study
A82-28483

EATING
Conditioned feeding suppression in rats produced by cross-coupled and simple motions
A82-26238

ECHO SOUNDING
Method for the determination of muscle cross-sectional area and dermato-adipose layer thickness using ultrasonic scanning
A82-27778

ECOLOGY
Microbial ecology of extreme environments: Antarctic dry valley yeasts and growth in substrate limited habitats
[NASA-CR-168742] N82-21869

ECOSYSTEMS
The influence of the type of trophic interactions on the dynamics of a two-level ecosystem
A82-25803
Biophysical methods for the study of ecosystems and the control of biosynthesis within them
A82-25820
A bilocal model of a dissipative structure --- in ecosystems
A82-27726

EDEMA
Protective effects of unsaturated fatty acids in adrenaline pulmonary edema and hypobaric hypoxia /The biological significance of catecholamine hyperlipidemia/
A82-27786

EFFECTIVE PERCEIVED NOISE LEVELS
Report on a visit to Canada of the 10-17 May 1980 Second International Symposium on Personal Hearing Protection in Industry --- affects of acoustic trauma
[RAE-TM-FS-377] N82-21900

EFFERENT NERVOUS SYSTEMS
Comments on the theory for the accuracy of rapid motor acts of Schmidt et al
A82-25681

EJECTION INJURIES
Significance of bone density to spinal trauma related to pilot ejection
N82-20849

EJECTION SEATS
Significance of bone density to spinal trauma related to pilot ejection
N82-20849
F/FB-111 ejection experience (1967-1980). Part 1: Evaluation and recommendations
[AD-A110199] N82-21879

ELASTOMERS
Physical testing of polymers for use in circulatory assist devices
[PB82-127069] N82-21808

ELBOW (ANATOMY)
Tennis elbow in aviators
A82-26243

ELECTRIC STIMULI
Some physiological mechanisms for the effects of the hypothalamus on erythron
A82-26753
The participation of adrenergic mechanisms in microcirculation changes under stress
A82-27757

ELECTRICAL RESISTANCE
Intracellular local changes in resistance in muscle fibers as a function of membrane potential
A82-27736

ELECTROCARDIOGRAPHY
Clinical and epidemiologic analysis of ischemic ECG responses to physical exercise in males
A82-25707
The prognostic significance of electrocardiotopogram parameters in macrofocal myocardial infarction
A82-27783
Suction-type ECG electrodes with a remote vacuum pump for stress testing
A82-27800
A diagram for rapid analysis of albino rat electrocardiograms
A82-27807

ELECTRODES
Suction-type ECG electrodes with a remote vacuum pump for stress testing
A82-27800

ELECTROENCEPHALOGRAPHY
Follow-up of 14 abnormal electroencephalograms in asymptomatic U.S. Air Force Academy cadets
A82-26242

ELECTROLYTE METABOLISM
Ion regulating function of human kidneys during long-term space flights and in model studies
N82-20840

ELECTROMAGNETIC FIELDS
Meteorological radars as a source of microwave electromagnetic field energy and questions of environmental health
A82-27802

Investigation of radiofrequency radiation effects on excitable tissues
[AD-A109813] N82-21873

ELECTROMYOGRAPHY
Electromyographic pattern of muscular activity during pushing-off and methods for its directed correction in young ski-jumpers on a trampoline
A82-27776

ELECTRON MICROSCOPY
Electron-histochemical and functional evaluation of the effects of aspirin on the thrombocytes of healthy people and patients with ischemic heart disease
A82-27788

ELECTRON TRANSFER
Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress
A82-27731

Participation of pheophytin in primary electron transfer processes in the reaction centers of photosystem II --- photoreduction reactions of chlorophyll derivative
A82-27746

ELECTRON TUNNELING
Physical model of the initial stages of energy transformation during oxidative phosphorylation
A82-27738

ELECTROPHORESIS
Microionophoretic analysis of the chemical sensitivity of neurons of the medial thalamus and ventromedial hypothalamus to acetylcholine in the case of immobilization-produced emotional stress in rats
A82-27770

Molecular relationships between closely related strains and species of nematodes
A82-28228

ELECTROPHYSIOLOGY
The nature of autonomic effects produced by sombrevin --- during narcosis
A82-25693

Electroacupuncture in the complex treatment of trifacial neuralgia
A82-27775

EMBRYOLOGY
Properties of stable dissipative structures in mathematical models of morphogenesis
A82-27741

Hematopoietic tissue development in Japanese quail embryogenesis
A82-27748

EMBRYOS
The role of membrane structures in the formation of the myofibrillar system in myogenesis
A82-27743

Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity
[NASA-TM-76831] N82-21867

EMOTIONAL FACTORS
Damage to the Ca/2+/-transporting system in the sarcoplasmic reticulum of the heart during emotional and nociceptive stress
A82-25810

Effects of emotional stress in bus drivers
A82-25819

An introduction to disaster - Some considerations of a psychological nature
A82-26236

The content of RNA in structures of the autonomic nervous system of rabbits under acute emotional stress
A82-27759

Effects of microwaves on acupuncture points under conditions of acute emotional stress in rabbits
A82-27763

Self-stimulation response as an anti-stress factor in animals
A82-27799

ENDOCRINE SYSTEMS
Catecholamine content of rat blood after flight aboard Cosmos-936 biosatellites
N82-20855

ENDOSCOPES
Conceptual ergonomics: Early detection of field of vision restrictions by means of ergoscopy --- photography of scale models through endoscopes
[DRIC-T-6253] N82-21899

ENDOTOXINS
Determination of the bacterial endotoxin content of the blood of irradiated animals and humans
A82-25708

ENERGY TRANSFER
Physical model of the initial stages of energy transformation during oxidative phosphorylation
A82-27738

ENGLAND
Anthropometric profile of the British car occupant
[MIRA-1979/2] N82-21904

ENVIRONMENT EFFECTS
The combined effects of ionizing radiation and certain other environmental factors /Review of the literature/
A82-27794

Environmental and health aspects of chloroform: A comprehensive bibliography of published literature, 1930 - 1981
[PB82-110115] N82-20870

Development and persistence of adaptation to ozone exposure in ozone-sensitive Southern California residents
[PB82-125899] N82-21889

ENVIRONMENTAL ENGINEERING
A review of aircraft cabin conditioning for operations in Australia
[AD-A109044] N82-20880

ENVIRONMENTAL QUALITY
Physiological and hygienic characteristics of the work of open-hearth steel smelters
A82-25700

ENVIRONMENTAL TESTS
Development and persistence of adaptation to ozone exposure in ozone-sensitive Southern California residents
[PB82-125899] N82-21889

ENZYME ACTIVITY
Characteristics of lipid hydrolysis and absorption in rats under motor activity restriction
A82-26757

ENZYMES
Molecular relationships between closely related strains and species of nematodes
A82-28228

Activity of some rat liver enzymes following flight aboard Cosmos-936 biosatellite
N82-20854

EPIDEMIOLOGY
Clinical and epidemiologic analysis of ischemic ECG responses to physical exercise in males
A82-25707

EPITHELIUM
The bactericidal activity of various clothing fabrics and dressing materials
A82-27801

EQUIPMENT SPECIFICATIONS
The importance of ear-like couplers in the design of an objective test facility for the measurement of earmuff insertion loss
[RAE-TM-FS-380] N82-21903

ERGOMETERS
A bicycle-ergometer evaluation of the physical adjustment made by patients after an inner mitral commissurotomy
A82-25690

Bicycle ergometry in the differential diagnosis of cardialgia
A82-27792

Comprehensive evaluation of the human functional state using ergometry
A82-27804

**ERYTHROCYTES**
Indicators of the erythrocytic system of rabbits in hot, humid climates
A82-25013
Some physiological mechanisms for the effects of the hypothalamus on erythron
A82-26753
Hematopoietic tissue development in Japanese quail embryogenesis
A82-27748
Structural and functional properties, and energy metabolism of erythrocytes during space flights varying in duration
N82-20841

**ETIOLOGY**
Syncope in aircrew
A82-26238
Tennis elbow in aviators
A82-26243
Significance of vestibular asymmetry to genesis of vestibular dysfunction
N82-20850

**EUSTACHIAN TUBES**
Effect of flight on the Eustachian tube function and the tympanic membrane system - A follow-up study
A82-26483

**EVOKED RESPONSE (PSYCHOPHYSIOLOGY)**
Investigation of the mechanism of auditory adaptation by the simultaneous recording of auditory evoked potentials of the brain and neurotropic potentials of the cochlea
A82-25714

**EVOLUTION (DEVELOPMENT)**
Amino acid codes in mitochondria as possible clues to primitive codes
A82-28227

**EXERCISE PHYSIOLOGY**
Ultrastructural changes in skeletal muscle fibers under the influence of acute physical exercise
A82-25717
Thermoregulatory responses in the rat to exercise in the heat following prolonged heat exposure
A82-26818
Electromyographic pattern of muscular activity during pushing-off and methods for its directed correction in young ski-jumpers on a trampoline
A82-27776
Effects of periodization in the yearly training cycle on cardiac volume in young athletes
A82-27779
A model of the dynamics of athlete condition during the yearly cycle and its role in the management of training
A82-27780
The determination of overall physical endurance in athletes
A82-27781
The norm and pathology in sports
A82-27782
Bicycle ergometry in the differential diagnosis of cardialgia
A82-27792
Suction-type EKG electrodes with a remote vacuum pump for stress testing
A82-27800

**EXOBIOLOGY**
Effects of space flight factors at the cellular level - Results of the Cytos experiment
A82-28485
Life in the Universe
[NASA-CP-2156] N82-20884

**EXPERIMENTAL DESIGN**
Design and validation of a tracking test for forming matched groups for continuous tracking experiments --- Book
A82-28393
A test facility for the objective measurement of circumaural hearing protector attenuation
[RAE-TM-FS-379] N82-21902

**EXPERIMENTATION**
Molecular events basic to cellular radiation response
[DE81-029813] N82-21875

**EXPIRED AIR**
Instrumentation simultaneously measuring carbon dioxide excretion and oxygen uptake in humans using titration methods
A82-26819

**EXTRATERRESTRIAL LIFE**
Life in the Universe
[NASA-CP-2156] N82-20884

**EYE MOVEMENTS**
Bioengineering approach to the study of the oculomotor apparatus of the human visual analyzer
A82-26798
Oculoparalytic illusion - Visual-field dependent spatial mislocalizations by humans partially paralysed with curare
A82-28250
Optokinetic factors and development of seasickness symptoms
N82-20851

## F

**FABRICATION**
Fabrication pf cardiovascular devices
[PB82-120148] N82-20869

**FABRICS**
Use of mathematical modeling for the determination of allowable quantities of chemical fibers in clothing
A82-25818
The bactericidal activity of various clothing fabrics and dressing materials
A82-27801
A method for the determination of the antimicrobial activity of clothing fabrics
A82-27803

**FACE (ANATOMY)**
Electroacupuncture in the complex treatment of trifacial neuralgia
A82-27775

**FATIGUE (BIOLOGY)**
Effects of emotional stress in bus drivers
A82-25819

**FATTY ACIDS**
Protective effects of unsaturated fatty acids in adrenaline pulmonary edema and hypobaric hypoxia /The biological significance of catecholamine hyperlipidemia/
A82-27786

**FEASIBILITY ANALYSIS**
An examination of the feasibility of administering prophylactic pyridostigmine by the percutaneous route
[NBL-TN-449] N82-21878

**FEEDBACK CONTROL**
Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller
A82-25632
Corrective saccades - Effect of shifting the saccade goal
A82-25647
Identification of the human operator in a closed-loop system
A82-26611
Electromyographic pattern of muscular activity during pushing-off and methods for its directed correction in young ski-jumpers on a trampoline
A82-27776

**FEMALES**
Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity
[NASA-TM-76831] N82-21867

**FEMUR**
Response of the cat femoral artery to increased circulation rate
A82-25712

**FIBERS**
Localization of adeninnucleotides in striated fibers of skeletal muscles
A82-27733
Intracellular local changes in resistance in muscle fibers as a function of membrane potential
A82-27736

**FIBRILLATION**
The role of membrane structures in the formation of the myofibrillar system in myogenesis
A82-27743

FIBROBLASTS
  Study of the initial stage of fibroblast attachment by means of reflective interference microscopy
  A82-27739
  Diffusion model of the dynamics of initial fibroblast attachment
  A82-27740

FIELD OF VIEW
  Conceptual ergonomics: Early detection of field of vision restrictions by means of ergoscopy --- photography of scale models through endoscopes
  [DRIC-T-6253] N82-21899

FITTING
  The wearing of hydrophilic contact lenses aboard a commercial jet aircraft. I - Humidity effects on fit
  A82-26234

FLICKER
  Comparison of flicker-photometric and flicker-threshold spectral sensitivities while the eye is adapted to colored backgrounds
  A82-28123

FLIGHT CREWS
  Cockpit automation and workload reduction - Too much of a good thing
  A82-26047
  G-tolerance enhancement - Straining ability comparison of aircrewmen, nonaircrewmen, and trained centrifuge subjects
  A82-26233
  Syncope in aircrew
  A82-26238
  Sarcoidosis in aircrew
  A82-26240
  Tennis elbow in aviators
  A82-26243
  Beta adrenergic blocking agents to control hypertension in aviation personnel
  A82-28490
  Studies on the flight medical aspects of the German Lufthansa non-stop route from Frankfurt to Rio de Janeiro, part 1
  [NASA-TM-76659] N82-20863
  A comparison of RAF and Italian aircrew: Anthropometric data
  [RAE-TM-FS-367] N82-20882

FLIGHT FATIGUE
  Cardiorespiratory assessment of 24-hour crash-diet effects on altitude, +Gz, and fatigue tolerances
  A82-26226
  G stress on A-10 pilots during JAWS II exercises
  A82-28475
  Some features of evaluation of work capacity and fatigue in helicopter pilots
  N82-20847

FLIGHT FITNESS
  The extraction and identification of drugs in aviation toxicology
  A82-28478
  Airline pilot disability - Economic impact of an airline preventive medicine program
  A82-28489

FLIGHT OPERATIONS
  Tennis elbow in aviators
  A82-26243

FLIGHT OPTIMIZATION
  Mode of flight and a mathematical model of pilot activity relating to flight-vehicle control
  A82-27513

FLIGHT SAFETY
  Pilot judgment - Training and evaluation
  A82-26777

FLIGHT SIMULATION
  Orientation perception during aircraft coordinated turns
  [AIAA PAPER 82-0256] A82-27096
  Post-acceleration chaotic atrial rhythm
  A82-28488

FLIGHT STRESS (BIOLOGY)
  Effect of flight on the Eustachian tube function and the tympanic membrane system - A follow-up study
  A82-28483
  Body composition data from the rat subjects of Cosmos 1129 experiment K-316
  [NASA-CR-160678] N82-20832
  Studies on the flight medical aspects of the German Lufthansa non-stop route from Frankfurt to Rio de Janeiro, part 1
  [NASA-TM-76659] N82-20863

FLIGHT TIME
  Studies on the flight medical aspects of the German Lufthansa non-stop route from Frankfurt to Rio de Janeiro, part 1
  [NASA-TM-76659] N82-20863

FLOW MEASUREMENT
  Ultrasonic method for measuring of hepatic portal blood flow in rats under conditions of contact biomicroscopy
  A82-27760

FLOW RESISTANCE
  Effect of breathing patterns on the perceived magnitude of added loads to breathing
  A82-26813
  Ventilatory adaptations to resistive loading during wakefulness and non-REM sleep
  A82-26814

FLUORO COMPOUNDS
  Effect of sodium fluoroacetate on oxygen consumption in rat and cat liver tissue and skeletal muscles
  A82-27808

FOOD INTAKE
  Elevation of hypoxia tolerance under the influence of prolonged fasting
  A82-25679

FORECASTING
  First All-Union Symposium on Problems of Evaluating and Forecasting Man's Functional States in Applied Physiology
  N82-20859
  Subjective confidence in forecasts
  [AD-A109730] N82-21890
  Diagnosticity and the base-rate effect
  [AD-A109731] N82-21891

FORMALISM
  Relative depth and local surface orientation from image motions
  [AD-A109565] N82-20873

FORTRAN
  HOMSIM: A simulator of three-dimensional hominoid dynamics
  [CSIR-SR-SWISK-23] N82-20879

FOULING
  Settlement of fouling organisms at the JITTER North Barnard Island raft site
  [NRL-TN-450] N82-21870
  Settlement of fouling organisms at the HMAS STIRLING raft site
  [NRL-TN-441] N82-21871

FUZZY SETS
  Sensitivity analysis as an aid in modelling and control of (poorly-defined) ecological systems --- closed ecological systems
  [NASA-CR-166308] N82-21895

G

GAMMA RAYS
  Potentiation of the protective effect of sulfur-containing radioprotectors --- against gamma rays
  A82-25683
  Mathematical modeling and analysis of death dynamics in irradiated mouse populations
  A82-27809

GAS DENSITY
  Respiratory and inert gas exchange during high-frequency ventilation
  A82-26817

GAS EXCHANGE
  The significance of the pulmonary gas-exchange response in physical exercise testing for the evaluation of the effectiveness of mitral commissurotomy
  A82-25805
  Respiratory and inert gas exchange during high-frequency ventilation
  A82-26817

GAS PRESSURE
  Effect of breathing patterns on the perceived magnitude of added loads to breathing
  A82-26813

GENETIC CODE
The effectiveness of various radio-protective agents in protecting the germ cells of male mice against the genetic effects of radiation. II - The incidence of reciprocal translocations in irradiated spermatogonia A82-25681
A model for protocellular coordination of nucleic acid and protein syntheses A82-26583
Amino acid codes in mitochondria as possible clues to primitive codes A82-28227
Comparative biosequence metrics --- molecular evolution A82-28230
The current status of REH theory --- Random Evolutionary Hits in biological molecular evolution A82-28231
The chemical basis for the origin of the genetic code and the process of protein synthesis [NASA-CR-168748] N82-21868
GERMINATION
The ultraviolet radiation environment of pollen and its effect on pollen germination N82-20829
GLOBAL AIR POLLUTION
Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis A82-26602
GLOBULINS
The therapeutic application of heterologous serum globulin against the acute radiation sickness of mice A82-25684
GONADS
The effectiveness of various radio-protective agents in protecting the germ cells of male mice against the genetic effects of radiation. II - The incidence of reciprocal translocations in irradiated spermatogonia A82-25681
GRAPHS (CHARTS)
A diagram for rapid analysis of albino rat electrocardiograms A82-27807
GRAVITATIONAL EFFECTS
Human tolerance of rotation at different levels of hypergravity N82-20852
GRIDS
Perceived rate of movement depends on contrast A82-25648

H

HABITATS
The effects of underwater explosions on marine life in Shoalwater Bay, Queensland [MRL-R-795] N82-21872
HEALING
Basic principles of hypoxia control during shock A82-25676
HEALTH
Cerebral hemodynamics in healthy individuals and the recognition of subclinical signs of insufficient blood supply to the brain A82-27751
HEALTH PHYSICS
Meteorological radars as a source of microwave electromagnetic field energy and questions of environmental health A82-27802
HEARING
Neurophysiological basis for determining the biological significance of acoustic stimuli A82-25719
Potential for interaction of low-level impulse and continuous noise [AD-A109830] N82-21883
HEART
Pathological anatomy and ultrastructure of the heart /Combined morphological investigation of the general pathological process in the myocardium/ --- Russian book A82-26525
Investigation of radiofrequency radiation effects on excitable tissues [AD-A109813] N82-21873
HEART DISEASES
A bicycle-ergometer evaluation of the physical adjustment made by patients after an inner mitral commissurotomy A82-25690
Bicycle ergometry in the differential diagnosis of cardialgia A82-27792
Incidence of ischemic heart disease and arterial hypertension in sedentary workers A82-27793
Relationship of personality factors and some social habits to cardiovascular risk in submariners A82-28487
HEART FUNCTION
Expansion of the experimental possibilities of evaluating cardiac output by means of integral rheography using a high-pass filter A82-25677
Damage to the Ca/2+/-transporting system in the sarcoplasmic reticulum of the heart during emotional and nociceptive stress A82-25810
Regulation of heart rhythm in depressor baroreflex A82-25812
Model of the mechanism of the regulation of the human cardiovascular system. I - Concerning the heart-regulation mechanism A82-26799
Effects of periodization in the yearly training cycle on cardiac volume in young athletes A82-27779
Effects of exercise adaptation on the age variation of human cardiac contractile function and left ventricular mass A82-27785
HEART RATE
Regulation of heart rhythm in depressor baroreflex A82-25812
Modulation of human sinus node function by systemic hypoxia A82-26812
HEAT BALANCE
A review of aircraft cabin conditioning for operations in Australia [AD-A109044] N82-20880
HEAT TOLERANCE
Effects of high ambient temperature on athlete adaptation to muscular activity A82-25706
Recording basic climatic parameters and their processing into integrated heat stress indices [DRIC-T-6292] N82-21885
HELICOPTERS
Some features of evaluation of work capacity and fatigue in helicopter pilots N82-20847
Physiological and hygienic rating of transport helicopter vibration damper N82-20848
HELIUM-OXYGEN ATMOSPHERES
Cognitive performance, sleep quality and mood during deep oxy-helium diving [RPS-1/81] N82-21893
HELMETS
The strength-endurance relationship in skeletal muscle - Its application to helmet design A82-28484
Measurement of the headband force of circumaural hearing protectors [RAE-TM-FS-378] N82-21901
HEMATOLOGY
Effects of pharmacological agents on the development of hemic hypoxia A82-25720
Indicators of the erythrocytic system of rabbits in hot, humid climates A82-25813
Hematogical lesions as a function of dosage of long-term radiation N82-20857
HEMATOPOIESIS
Hematopoietic tissue development in Japanese quail embryogenesis A82-27768

HEMODYNAMIC RESPONSES
Some characteristics of cardiovascular system activity and adaptive antihypoxic mechanisms in keyboard computer operators during the course of a work shift
A82-25705
Response of the cat femoral artery to increased circulation rate
A82-25712
The significance of the pulmonary gas-exchange response in physical exercise testing for the evaluation of the effectiveness of mitral commissurotomy
A82-25805
Cardiorespiratory assessment of 24-hour crash-diet effects on altitude, +Gz, and fatigue tolerances
A82-26228
Hemodynamic responses in orthostasis following 5 hours of sitting
A82-26232
The effects of systemic arterial and venous pressures on blood volume in the cerebral vessels
A82-26755
The participation of adrenergic mechanisms in microcirculation changes under stress
A82-27757
Complex technique for studying the oxygen regimen and hemodynamics of the oral mucosa under hypoxia
A82-27789
Mechanisms for the adaptive and trophic effects of the sympathetic nervous system on cerebral vessels and tissue
A82-28458
The information content of indicators of cerebral vascular responses to adequate influences
A82-28459
Positive pressure breathing as a means of preventing adverse reactions to antiorthostatic position
N82-20842

HEMODYNAMICS
Cerebral hemodynamics in healthy individuals and the recognition of subclinical signs of insufficient blood supply to the brain
A82-27751
Contribution of the kallikrein-kinin system to microcirculation disorders in the case of immobilization stress
A82-27787
Mathematical modeling of microhemodynamics in the resistant part of the regional vascular bed
A82-27790
Hemodynamics and external respiration in patients with bronchial asthma at rest and during exercise
A82-27791

HETEROCYCLIC COMPOUNDS
Basic nitrogen-heterocyclic compounds in the Murchison meteorite
A82-28284

HEURISTIC METHODS
An overview of artificial intelligence and robotics. Volume 2: Robotics
[NASA-CR-168727] N82-21896

HIGH ALTITUDE
Comparative evaluation of pressure chamber conditioning and man's adaptation to hypoxia at high altitude
N82-20853

HIGH TEMPERATURE ENVIRONMENTS
Indicators of the erythrocytic system of rabbits in hot, humid climates
A82-25813

HISTAMINES
Serotonin and histamine metabolism in cosmonauts
N82-20858

HISTOCHEMICAL ANALYSIS
Electron-histochemical and functional evaluation of the effects of aspirin on the thrombocytes of healthy people and patients with ischemic heart disease
A82-27784

HISTOLOGY
A study of cerebral microvessels by means of automatic image analysis
A82-27766
Regeneration of skeletal muscle after mechanical trauma in reptiles
A82-27767

HOMEOSTASIS
Recording basic climatic parameters and their processing into integrated heat stress indices
[DRIC-T-6292] N82-21885

HORIZONTAL ORIENTATION
Influence of orientation method on quality of pilot's spatial orientation
N82-20845

HORMONE METABOLISMS
Dynamics of aerobic work capacity and changes in the functional stability of the oxygen-supply mechanism and hypophysical adrenocortical system in skiers
A82-25696
Thyroid and hypophysial thyrotropic function in athletes during bicycle ergometer exercise
A82-25716
The participation of estradiol and progesterone in animal body mass regulation mechanisms
A82-25801

HOT WEATHER
Indicators of the erythrocytic system of rabbits in hot, humid climates
A82-25813

HUMAN BEINGS
Effects of exercise adaptation on the age variation of human cardiac contractile function and left ventricular mass
A82-27785

HUMAN BODY
Evaluation of the antioxidant system of the body
A82-25709
HOMSIM: A simulator of three-dimensional hominoid dynamics
[CSIR-SR-SWISK-23] N82-20879

HUMAN CENTRIFUGES
Post-acceleration chaotic atrial rhythm
A82-28486

HUMAN FACTORS ENGINEERING
Simplicity in command and control systems - A human factors consideration --- for man computer interface design
A82-27222
The evaluation of information display on the basis of the transinformation --- German book
A82-28394
The strength-endurance relationship in skeletal muscle - Its application to helmet design
A82-28484
Sourcebook of temporal factors affecting information transfer from visual displays
[AD-A109907] N82-21880
Human engineering guides to design of displays for underwater applications
[AD-A110317] N82-21898
Conceptual ergonomics: Early detection of field of vision restrictions by means of ergoscopy --- photography of scale models through endoscopes
[DRIC-T-6253] N82-21899
Measurement of the headband force of circumaural hearing protectors
[RAE-TM-FS-378] N82-21901
Anthropometric profile of the British car occupant
[MIRA-1979/2] N82-21904

HUMAN PATHOLOGY
Main trends in combatting oxygen hunger
A82-25686
Connection of motor regimen with morbidity in workers
A82-25695
Seasonal vascular tension variations in patients with cerebral circulatory disorders under the conditions of an arid zone
A82-25715
Thermoregulation and morbidity in coal miners
A82-25815
Phenytoin - Ineffective against acute mountain sickness
A82-26231
Sarcoidosis in aircrew
A82-26240
Follow-up of 14 abnormal electroencephalograms in asymptomatic U.S. Air Force Academy cadets
A82-26242
Pathological anatomy and ultrastructure of the heart /Combined morphological investigation of the general pathological process in the myocardium/ --- Russian book
A82-26525

Stenoses of the carotid artery and disorders of the cerebral circulation /clinical and angiographic comparisons/ A82-27752
Rheoencephalographic signs of inadequate cerebral blood supply in incipient cerebrovascular insufficiency A82-27755
The use of ultrasonic Doppler techniques in the diagnosis of arterial occlusions in the basis cerebri - A Doppler angiography study A82-27756
Problems of the operational medical in-flight monitoring of pilots A82-27768
Electroacupuncture in the complex treatment of trifacial neuralgia A82-27775
The norm and pathology in sports A82-27782
Physiological criteria and methods for increasing the effectiveness of correction of hypoxic states A82-27797

**HUMAN PERFORMANCE**
A psychophysiological analysis of the memory changes undergone by humans in adapting to new climatic and geographic conditions A82-25694
Comprehensive evaluation of the human functional state using ergometry A82-27804
Sleep loss, recovery sleep, and military performance A82-28025
Altitude and hypoxia as phase shift inducers --- of human circadian rhythms A82-28480
First All-Union Symposium on Problems of Evaluating and Forecasting Man's Functional States in Applied Physiology N82-20859
Female and male size, strength and performance: A review of current literature [AD-A109270] N82-20868
Computer-Managed Instruction in Navy Technical training: An attitudinal survey [AD-A109664] N82-20871
Diagnosticity and the base-rate effect [AD-A109731] N82-21891

**HUMAN REACTIONS**
An introduction to disaster - Some considerations of a psychological nature A82-26236
Trace reactions and the ambient temperature --- organism, organ and tissue thermoregulatory reactions A82-28454
Development and persistence of adaptation to ozone exposure in ozone-sensitive Southern California residents [PB82-125899] N82-21889

**HUMAN TOLERANCES**
Basis for the refinement of permissible levels of local vibration A82-25702
Human tolerance of rotation at different levels of hypergravity N82-20852
Comparative evaluation of pressure chamber conditioning and man's adaptation to hypoxia at high altitude N82-20853
Human reaction to low frequency motion: Preliminary studies --- slip motion and sea roughness [RAE-TM-FS-365] N82-21884
Recording basic climatic parameters and their processing into integrated heat stress indices [DRIC-T-6292] N82-21885

**HUMIDITY**
The wearing of hydrophilic contact lenses aboard a commercial jet aircraft. I - Humidity effects on fit A82-26234

**HYDROCARBONS**
Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change A82-27561

**HYDROGEN BONDS**
The possible role of hydrogen bonds in the mechanism of muscular contraction A82-27734

**HYDROLYSIS**
Characteristics of lipid hydrolysis and absorption in rats under motor activity restriction A82-26757
Influence on urea hydrolysis of typical microflora of urine and pressurised habitats N82-20856

**HYGIENE**
Physiological and hygienic characteristics of the work of open-hearth steel smelters A82-25700

**HYPERCAPNIA**
Arterial CO2 response to low levels of inspired CO2 in awake beagle dogs A82-26815

**HYPERTENSION**
The effect of adapting to high-altitude hypoxia on certain indicators of catecholamine metabolism in rats in the case of spontaneous hereditary hypertension A82-27758
Incidence of ischemic heart disease and arterial hypertension in sedentary workers A82-27793
Beta adrenergic blocking agents to control hypertension in aviation personnel A82-28490

**HYPOKINESIA**
Characteristics of lipid hydrolysis and absorption in rats under motor activity restriction A82-26757
Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress A82-27731
The participation of adrenergic mechanisms in microcirculation changes under stress A82-27757
Changes in the level of catecholamines in the noradrenaline-synthesizing structures of the rat brain following immobilization A82-27764
Microionophoretic analysis of the chemical sensitivity of neurons of the medial thalamus and ventromedial hypothalamus to acetylcholine in the case of immobilization-produced emotional stress in rats A82-27770
Contribution of the kallikrein-kinin system to microcirculation disorders in the case of immobilization stress A82-27787
Incidence of ischemic heart disease and arterial hypertension in sedentary workers A82-27793

**HYPOMETABOLISM**
Reflexometry as an additional method of investigating hypoactivity in the thyroid gland A82-25802

**HYPOTHALAMUS**
Some physiological mechanisms for the effects of the hypothalamus on erythron A82-26753
Microionophoretic analysis of the chemical sensitivity of neurons of the medial thalamus and ventromedial hypothalamus to acetylcholine in the case of immobilization-produced emotional stress in rats A82-27770
Self-stimulation response as an anti-stress factor in animals A82-27799

**HYPOTHERMIA**
Clinical and experimental evidence for the use of hypothermia in decompression sickness A82-26239
Mechanisms of the reaction of dividing cells to hypothermia A82-27750
Trace reactions and the ambient temperature --- organism, organ and tissue thermoregulatory reactions A82-28454

HYPOXIA
- Basic principles of hypoxia control during shock A82-25676
- Dynamics of brain cell oxygen tension and electrical activity in the norm and in hypoxia A82-25678
- Elevation of hypoxia tolerance under the influence of prolonged fasting A82-25679
- The energy supply of serotonin inactivation processes in the lungs A82-25680
- The indication of radiation resistance modified by radio-protective agents. III - Analysis of the relationship between hypoxic and radio-protective effects in the rat bone marrow for hypoxias of different origin A82-25682
- Main trends in combatting oxygen hunger A82-25686
- Some characteristics of cardiovascular system activity and adaptive antihypoxic mechanisms in keyboard computer operators during the course of a work shift A82-25705
- Effects of pharmacological agents on the development of hematic hypoxia A82-25720
- Modulation of human sinus node function by systemic hypoxia A82-26812
- The effect of adapting to high-altitude hypoxia on certain indicators of catecholamine metabolism in rats in the case of spontaneous hereditary hypertension A82-27758
- Mechanism for the antihypoxic effects of depakin A82-27761
- Adaptive changes in the rat hypophysical-adrenal system upon altitude hypoxia A82-27772
- Protective effects of unsaturated fatty acids in adrenaline pulmonary edema and hypobaric hypoxia /The biological significance of catecholamine hyperlipidemia/ A82-27786
- Complex technique for studying the oxygen regimen and hemodynamics of the oral mucosa under hypoxia A82-27789
- Physiological criteria and methods for increasing the effectiveness of correction of hypoxic states A82-27797
- Altitude and hypoxia as phase shift inducers --- of human circadian rhythms A82-28480
- Comparative evaluation of pressure chamber conditioning and man's adaptation to hypoxia at high altitude N82-20853

I

ILLUMINATION
- Finding the illuminant direction A82-28117

IMAGE CONTRAST
- Perceived rate of movement depends on contrast A82-25648
- Fading of stabilized retinal images A82-28116

IMAGE INTENSIFIERS
- Finding the illuminant direction A82-28117

IMAGE PROCESSING
- A study of the human visual system in support of automated feature extraction [AD-A109139] N82-20867
- Relative depth and local surface orientation from image motions [AD-A109565] N82-20873
- Determining the instantaneous direction of motion from optical flow generated by a curvilinearly moving observer [AD-A109566] N82-20874
- An overview of artificial intelligence and robotics. Volume 2: Robotics [NASA-CR-168727] N82-21896

IMAGES
- Symbolic reasoning among 3-D models and 2-D images [AD-A110316] N82-21881

IMAGING TECHNIQUES
- NMR-imagery - A new method of biophysical investigation A82-27745
- Ultrasonic blood flow imaging using correlation processing N82-20861
- Symbolic reasoning among 3-D models and 2-D images [AD-A110316] N82-21881

IMMOBILIZATION
- Recovery time course in contractile function of fast and slow skeletal muscle after hindlimb immobilization A82-26816
- Role of immobilization of irradiated rats in the protective effect of bone marrow shielding [NASA-TM-76828] N82-21866
- Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity [NASA-TM-76831] N82-21867

IMMUNITY
- Relationship between microflora and immunity of cosmonauts carrying staphylococcus aureus in the nasal cavity N82-20843

IMPLANTED ELECTRODES (BIOLOGY)
- Intraretinal recordings of slow electrical responses to steady illumination in monkey - Isolation of receptor responses and the origin of the light peak A82-25649

IMPULSES
- Potential for interaction of low-level impulse and continuous noise [AD-A109430] N82-21883

IN-FLIGHT MONITORING
- Problems of the operational medical in-flight monitoring of pilots A82-27768

INDUSTRIAL SAFETY
- Vestibular dysfunctions in caisson workers subjected to a combination of occupational hazards A82-25689
- Report on a visit to Canada of the 10-17 May 1980 Second International Symposium on Personal Hearing Protection in Industry --- effects of acoustic trauma [RAE-TM-FS-377] N82-21900

INFECTIOUS DISEASES
- Aspects of the body's defence mechanisms as protection against biological agents --- used in biological warfare [DRIC-T-6433] N82-21886

INHIBITION (PSYCHOLOGY)
- Some mechanisms of central inhibition A82-28456

INSERTION LOSS
- The importance of ear-like couplers in the design of an objective test facility for the measurement of earmuff insertion loss [RAE-TM-FS-380] N82-21903

INSTRUMENT ORIENTATION
- Influence of orientation method on quality of pilot's spatial orientation N82-20845

INTELLIGIBILITY
- Increase in jammed word intelligibility due to training of listeners A82-26235

INTERACTIVE CONTROL
- Statistical optimization of interaction in man-machine systems A82-28218
- A study of interactive control scheduling and economic assessment for robotic systems [NASA-CR-168652] N82-20878

INTERFACES
- Guidelines for man-machine interface design [VTT-RR-23/81] N82-21906

ION IRRADIATION
- Mathematical modeling and analysis of death dynamics in irradiated mouse populations A82-27809

IONIZED GASES
Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress
A82-27731

IONIZING RADIATION
The combined effects of ionizing radiation and certain other environmental factors /Review of the literature/
A82-27798

IONS
Ion regulating function of human kidneys during long-term space flights and in model studies
N82-20840

IRRADIANCE
Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis
A82-26602

IRRADIATION
The dynamics of rat bone marrow CFUc content during prolonged fractionated irradiation
A82-27811

ISCHEMIA
Clinical and epidemiologic analysis of ischemic ECG responses to physical exercise in males
A82-25707

Characteristics of oxygen metabolism in patients with chronic ischemic heart disease during physical exercise
A82-25806

Computer analysis of tests involving physical stress --- in cardiology
A82-25807

Bilateral disturbances of the perception function of the brain in patients with unilateral disorders due to acute disturbances of the cerebral circulation
A82-27753

Age-related features of blood-coagulation changes in the treatment of cerebral ischemias with indirect-action anticoagulants
A82-27754

Electron-histochemical and functional evaluation of the effects of aspirin on the thrombocytes of healthy people and patients with ischemic heart disease
A82-27784

Incidence of ischemic heart disease and arterial hypertension in sedentary workers
A82-27793

ITALY
A comparison of RAF and Italian aircrew: Anthropometric data
[RAE-TM-FS-367]
N82-20882

J

JAMMING
Increase in jammed word intelligibility due to training of listeners
A82-26235

JUDGMENTS
Pilot judgment - Training and evaluation
A82-26777

Diagnosticity and the base-rate effect
[AD-A109731]
N82-21891

K

KIDNEYS
Ion regulating function of human kidneys during long-term space flights and in model studies
N82-20840

KINEMATICS
An overview of artificial intelligence and robotics. Volume 2: Robotics
[NASA-CR-168727]
N82-21896

L

LASER INTERFEROMETRY
The accuracy of laser diffraction measurements of sarcomere lengths in contracting muscles
A82-27737

LEAVES
Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis
A82-26602

Antenna form of photosystem-2 chlorophyll in chloroplasts
A82-27730

LESIONS
Hematogical lesions as a function of dosage of long-term radiation
N82-20857

LIFE SCIENCES
How life began --- international symposium
A82-28094

LIFE SPAN
Mechanism for the antihypoxic effects of depakin
A82-27761

LIFE SUPPORT SYSTEMS
Problems of the development of life support and safety assurance system for space crews
A82-27510

LIMBS (ANATOMY)
Recovery time course in contractile function of fast and slow skeletal muscle after hindlimb immobilization
A82-26816

A practical ultrasonic plethysmograph
A82-28486

LIPID METABOLISM
Evaluation of the antioxidant system of the body
A82-25709

Kinetics of lipid peroxidation in cellular organelle anoxia under different conditions
A82-25809

Damage to the Ca/2+/-transporting system in the sarcoplasmic reticulum of the heart during emotional and nociceptive stress
A82-25810

Characteristics of lipid hydrolysis and absorption in rats under motor activity restriction
A82-26757

LIPIDS
Study of the viscosity of free and protein-bound membrane lipids
A82-27732

Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes
A82-27748

LIVER
Mitotic activity and chromosome aberrations in the regenerated liver of rats after irradiation by X rays
A82-25811

Ultrasonic method for measuring of hepatic portal blood flow in rats under conditions of contact biomicroscopy
A82-27760

Effect of sodium fluoroacetate on oxygen consumption in rat and cat liver tissue and skeletal muscles
A82-27808

Activity of some rat liver enzymes following flight aboard Cosmos-936 biosatellite
N82-20854

LONG DURATION SPACE FLIGHT
Seventy-five days in space --- technical and medico-biological experiments
A82-27773

Ion regulating function of human kidneys during long-term space flights and in model studies
N82-20840

LOW TEMPERATURE ENVIRONMENTS
The physiology and hygiene of the individual protection of man from the cold --- Russian book
A82-26522

LOWER BODY NEGATIVE PRESSURE
Cardiorespiratory assessment of 24-hour crash-diet effects on altitude, +Gz, and fatigue tolerances
A82-26228

LUNG MORPHOLOGY
The role of calcium in the activity of the smooth muscles of the pulmonary veins
A82-26756

Protective effects of unsaturated fatty acids in adrenaline pulmonary edema and hypobaric hypoxia /The biological significance of catecholamine hyperlipidemia/
A82-27786

**LUNGS**
The energy supply of serotonin inactivation processes in the lungs
A82-25680

**LYMPH**
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness
A82-25804

## M

**MAGNETIC EFFECTS**
Use of a constant magnetic field for the treatment of vibration sickness
A82-27796
/H-3/-noradrenaline release potentiated in a clonal nerve cell line by low-intensity pulsed magnetic fields
A82-28099

**MAGNETIC FLUX**
Use of a constant magnetic field for the treatment of vibration sickness
A82-27796

**MAGNETIC PERMEABILITY**
The magnetic susceptibility of rhodopsin
A82-27729

**MAN MACHINE SYSTEMS**
Identification of the human operator in a closed-loop system
A82-26611
Simplicity in command and control systems - A human factors consideration --- for man computer interfare design
A82-27222
Mode of flight and a mathematical model of pilot activity relating to flight-vehicle control
A82-27513
Statistical optimization of interaction in man-machine systems
A82-28218
The evaluation of information display on the basis of the transinformation --- German book
A82-28394
A study of the human visual system in support of automated feature extraction
[AD-A109139] N82-20867
Computer-Managed Instruction in Navy Technical training: An attitudinal survey
[AD-A109664] N82-20871
Models and mockups as design aids, revision A
[AD-A109511] N82-20881
Guidelines for man-machine interface design
[VTT-RR-23/81] N82-21906

**MANIPULATORS**
Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller
A82-25632
A study of interactive control scheduling and economic assessment for robotic systems
[NASA-CR-168652] N82-20878
An overview of artificial intelligence and robotics. Volume 2: Robotics
[NASA-CR-168727] N82-21896

**MANNED SPACE FLIGHT**
Problems of the development of life support and safety assurance system for space crews
A82-27510

**MANUAL CONTROL**
Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller
A82-25632

**MAPPING**
An evaluation of the effectiveness of color coded tactical symbology applied to military maps
[AD-A109675] N82-20872

**MAPS**
An evaluation of the effectiveness of color coded tactical symbology applied to military maps
[AD-A109675] N82-20872

**MARINE BIOLOGY**
Patterns of bacterioplankton growth in the sea
N82-20860

**MARINE ENVIRONMENTS**
Physiological, hygienic and psychological questions in the adaptation of sailors to conditions of year-round arctic navigation
A82-27005

**MARINE TECHNOLOGY**
Settlement of fouling organisms at the JITTEE North Barnard Island raft site
[MRL-TN-450] N82-21870
Settlement of fouling organisms at the HMAS STIRLING raft site
[MRL-TN-441] N82-21871

**MATHEMATICAL MODELS**
Ultrasonic blood flow imaging using correlation processing
N82-20861
A quantitative analysis of transcutaneous oxygen measurement
N82-20862

**MEASURE AND INTEGRATION**
Comparative biosequence metrics --- molecular evolution
A82-28230

**MEASURING INSTRUMENTS**
Dose loads to personnel engaged in the preparation of radioisotope thickness gages
A82-25816

**MEDICAL EQUIPMENT**
New trends in the development of aerospace medical technology
A82-27515
NMR-imagery - A new method of biophysical investigation
A82-27745

**MEDICAL SCIENCE**
Effects of microwaves on acupuncture points under conditions of acute emotional stress in rabbits
A82-27763
The contribution of V. N. Chernigovskii to the development of diving physiology and medicine
A82-28457
An examination of the feasibility of administering prophylactic pyridostigmine by the percutaneous route
[MRL-TN-449] N82-21878

**MEMBRANE STRUCTURES**
Study of the viscosity of free and protein-bound membrane lipids
A82-27732
The role of membrane structures in the formation of the myofibrillar system in myogenesis
A82-27743
Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes
A82-27744

**MEMBRANES**
Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change
A82-27561
Intracellular local changes in resistance in muscle fibers as a function of membrane potential
A82-27736
Effect of flight on the Eustachian tube function and the tympanic membrane system - A follow-up study
A82-28483
Investigation of radiofrequency radiation effects on excitable tissues
[AD-A109813] N82-21873

**MEMORY**
A psychophysiological analysis of the memory changes undergone by humans in adapting to new climatic and geographic conditions
A82-25694

**MENTAL PERFORMANCE**
The effect of the circadian rhythm of physiological functions on the mental work capacity of operators
A82-27769
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[BPN-1/81] N82-21893

**METABOLIC WASTES**
Instrumentation simultaneously measuring carbon dioxide excretion and oxygen uptake in humans using titration methods
A82-26819

**METABOLISM**
Instrumentation simultaneously measuring carbon dioxide excretion and oxygen uptake in humans using titration methods
A82-26819

Structural and functional properties, and energy metabolism of erythrocytes during space flights varying in duration
N82-20841

Serotonin and histamine metabolism in cosmonauts
N82-20858

**METALLURGY**
Physiological and hygienic characteristics of the work of open-hearth steel smelters
A82-25700

**METEORITIC COMPOSITION**
Basic nitrogen-heterocyclic compounds in the Murchison meteorite
A82-28284

**METEOROLOGICAL PARAMETERS**
Recording basic climatic parameters and their processing into integrated heat stress indices
[DRIC-T-6252] N82-21885

**METEOROLOGICAL RADAR**
Meteorological radars as a source of microwave electromagnetic field energy and questions of environmental health
A82-27802

**METRIC SPACE**
Comparative biosequence metrics --- molecular evolution
A82-28230

**MICROBIOLOGY**
Structural and functional organization of the microcirculatory bed in skeletal muscle
A82-27749

**MICROORGANISMS**
A method for the determination of the antimicrobial activity of clothing fabrics
A82-27803

Relationship between microflora and immunity of cosmonauts carrying staphylococcus aureus in the nasal cavity
N82-20843

Influence on urea hydrolysis of typical microflora of urine and pressurized habitats
N82-20856

Microbial ecology of extreme environments: Antarctic dry valley yeasts and growth in substrate limited habitats
[NASA-CR-168742] N82-21869

**MICROSCOPY**
Study of the initial stage of fibroblast attachment by means of reflective interference microscopy
A82-27739

**MICROSTRUCTURE**
Ultrastructural changes in skeletal muscle fibers under the influence of acute physical exercise
A82-25717

**MICROWAVE EMISSION**
Athermal submillimeter-microwave biological effects
A82-26865

Meteorological radars as a source of microwave electromagnetic field energy and questions of environmental health
A82-27802

**MICROWAVE FREQUENCIES**
Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes
A82-27744

**MICROWAVES**
Effects of microwaves on acupuncture points under conditions of acute emotional stress in rabbits
A82-27763

**MILITARY OPERATIONS**
Sleep loss, recovery sleep, and military performance
A82-28025

An evaluation of the effectiveness of color coded tactical symbology applied to military maps
[AD-A109675] N82-20872

Models and mockups as design aids, revision A
[AD-A109511] N82-20881

**MILITARY PSYCHOLOGY**
Serial personality evaluations of repatriated U.S. Air Force southeast Asia POWs
A82-26237

Relationship of personality factors and some social habits to cardiovascular risk in submariners
A82-28087

**MINES**
Coagulopathy in miners with vibration sickness
A82-25704

Thermoregulation and morbidity in coal miners
A82-25815

**MITOCHONDRIA**
Kinetics of lipid peroxidation in cellular organelle anoxia under different conditions
A82-25809

Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress
A82-27731

Amino acid codes in mitochondria as possible clues to primitive codes
A82-28227

**MITOSIS**
Mitotic activity and chromosome aberrations in the regenerated liver of rats after irradiation by X rays
A82-25811

Mechanisms of the reaction of dividing cells to hypothermia
A82-27750

**MOBILITY**
Mobility aid for the blind
[NASA-CR-168731] N82-21894

**MOLECULAR BIOLOGY**
Reception of retinol in rat retinas - Various molecular forms
A82-25687

The magnetic susceptibility of rhodopsin
A82-27729

**MOLECULAR STRUCTURE**
Primary light-harvesting system: Phycobilisomes and associated membranes
[DE81-028326] N82-21874

**MOLLUSKS**
Settlement of fouling organisms at the JITTEE North Barnard Island raft site
[NRL-TN-450] N82-21870

Settlement of fouling organisms at the HMAS STIRLING raft site
[NRL-TN-441] N82-21871

**MONITORS**
The transfer of failure-detection skills between monitoring and controlling dynamic systems
A82-26776

**MORPHOLOGY**
Pathological anatomy and ultrastructure of the heart /Combined morphological investigation of the general pathological process in the myocardium/ --- Russian book
A82-26525

Antenna form of photosystem-2 chlorophyll in chloroplasts
A82-27730

Structural and functional properties, and energy metabolism of erythrocytes during space flights varying in duration
N82-20841

Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity
[NASA-TM-76831] N82-21867

**MOTION AFTEREFFECTS**
Conditioned feeding suppression in rats produced by cross-coupled and simple motions
A82-26230

**MOTION PERCEPTION**
Perceived rate of movement depends on contrast
A82-25648

Orientation perception during aircraft coordinated turns
[AIAA PAPER 82-0258] A82-27096

Motion and vision. IV - Isotropic and anisotropic spatial responses
A82-28115

Evidence for a boundary effect in roll vection
A82-28500

Optokinetic factors and development of seasickness symptoms
N82-20051
Relative depth and local surface orientation from image motions
[AD-A109565] N82-20873
MOTION SICKNESS
Conditioned feeding suppression in rats produced by cross-coupled and single motions
A82-26230
Significance of vestibular asymmetry to genesis of vestibular dysfunction
N82-20850
Optokinetic factors and development of seasickness symptoms
N82-20851
Human reaction to low frequency motion: Preliminary studies --- slip motion and sea roughness
[RAE-TR-FS-365] N82-21084
MOUTH
Complex technique for studying the oxygen regimen and hemodynamics of the oral mucosa under hypoxia
A82-27789
MUCOUS
Complex technique for studying the oxygen regimen and hemodynamics of the oral mucosa under hypoxia
A82-27789
MUSCLES
The interaction of alpha-actinin and tropomyosin with F-actin
A82-27727
Localization of adeninnucleotides in striated fibers of skeletal muscles
A82-27733
Intracellular local changes in resistance in muscle fibers as a function of membrane potential
A82-27736
The role of membrane structures in the formation of the myofibrillar system in myogenesis
A82-27743
Structural and functional organization of the microcirculatory bed in skeletal muscle
A82-27749
MUSCULAR FATIGUE
Physiological effects of low levels of vibration combined with local muscular exercise in the cutting of semiprecious stones
A82-25701
MUSCULAR FUNCTION
Effects of high ambient temperature on athlete adaptation to muscular activity
A82-25706
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness
A82-25804
Oxygen, carbon dioxide and the calcium control of relaxation mechanisms in cerebral artery smooth muscles
A82-26754
The role of calcium in the activity of the smooth muscles of the pulmonary veins
A82-26756
Changes in contractile protein composition and properties following space flight
A82-27720
The possible role of hydrogen bonds in the mechanism of muscular contraction
A82-27734
Model of a 'two-headed' myosin cross-bridge and the possibility of its motion in skeletal muscles
A82-27735
The accuracy of laser diffraction measurements of sarcomere lengths in contracting muscles
A82-27737
Electromyographic pattern of muscular activity during pushing-off and methods for its directed correction in young ski-jumpers on a trampoline
A82-27776
The possibility of maintaining the temperature and work capacity of the extremities
A82-27806
MUSCULAR STRENGTH
Method for the determination of muscle cross-sectional area and dermato-adipose layer thickness using ultrasonic scanning
A82-27778
The strength-endurance relationship in skeletal muscle - Its application to helmet design
A82-28484
MUSCULOSKELETAL SYSTEM
Ultrastructural changes in skeletal muscle fibers under the influence of acute physical exercise
A82-25717
Recovery time course in contractile function of fast and slow skeletal muscle after hindlimb immobilization
A82-26816
Changes in contractile protein composition and properties following space flight
A82-27720
Study of the viscosity of free and protein-bound membrane lipids
A82-27732
Model of a 'two-headed' myosin cross-bridge and the possibility of its motion in skeletal muscles
A82-27735
Regeneration of skeletal muscle after mechanical trauma in reptiles
A82-27767
Effect of sodium fluoroacetate on oxygen consumption in rat and cat liver tissue and skeletal muscles
A82-27808
Body composition data from the rat subjects of Cosmos 1129 experiment K-316
[NASA-CR-160678] N82-20832
MYOCARDIAL INFARCTION
Computer analysis of tests involving physical stress --- in cardiology
A82-25807
The prognostic significance of electrocardiotopogram parameters in macrofocal myocardial infarction
A82-27783
MYOCARDIUM
Pathological anatomy and ultrastructure of the heart /Combined morphological investigation of the general pathological process in the myocardium/ --- Russian book
A82-26525

N

NARCOSIS
The nature of autonomic effects produced by sombrevin --- during narcosis
A82-25693
NECK (ANATOMY)
The strength-endurance relationship in skeletal muscle - Its application to helmet design
A82-28484
NERVES
Electroacupuncture in the complex treatment of trifacial neuralgia
A82-27775
NERVOUS SYSTEM
The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration
A82-25721
A comparison of the antimuscarinic properties of aprophen with those of some other anticholinergic drugs
[BRL-R-794] N82-21877
NETWORK SYNTHESIS
Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller
A82-25632
NEUROGLIA
Effect of white noise on the auditory cortex ultrastructure in rats
A82-25711
NEUROLOGY
Stenoses of the carotid artery and disorders of the cerebral circulation /clinical and angiographic comparisons/
A82-27752
NEUROMUSCULAR TRANSMISSION
Expenditure of energy and the state of the neuromuscular system in athletes who use low-calorie diets to control their weight
A82-25608

NEURONS
  The sensitivity of silent and spontaneously active cat cerebral cortex neurons to anoxia A82-26751
  /N-3/-noradrenaline release potentiated in a clonal nerve cell line by low-intensity pulsed magnetic fields A82-28099
  Some mechanisms of central inhibition A82-28456
NEUROPHYSIOLOGY
  Ultrastructural organisation of AI and AIV zone projections of the cat auditory cortex to the posterior colliculi of the tectum opticum A82-25710
  Neurophysiological basis for determining the biological significance of acoustic stimuli A82-25719
  Nutrients that modify brain function A82-25722
  General characteristics of the development of the body's reaction to external stimuli A82-27747
  Electroacupuncture in the complex treatment of trifacial neuralgia A82-27775
  Central pain mechanisms A82-27788
  /N-3/-noradrenaline release potentiated in a clonal nerve cell line by low-intensity pulsed magnetic fields A82-28099
  Some neurophysiological correlates of visual perception A82-28455
NEUROSES
  Clinical characteristics of neurotic disorders in female long-distance telephone operators A82-25697
NEUTRONS
  Effect of white noise on the auditory cortex ultrastructure in rats A82-25711
NITROGEN
  Genetic engineering possibilities for CELSS: A bibliography and summary of techniques [NASA-CR-166306] N82-20876
NITROGEN COMPOUNDS
  Basic nitrogen-heterocyclic compounds in the Murchison meteorite A82-28284
NITROGEN DIOXIDE
  Effects of short-term intermittent air pollutants on incidence and severity of acute respiratory disease: Data collection and quality assurance [PB82-129879] N82-21887
NOISE (SOUND)
  Potential for interaction of low-level impulse and continuous noise [AD-A109430] N82-21883
NOISE INJURIES
  Report on a visit to Canada of the 10-17 May 1980 Second International Symposium on Personal Hearing Protection in Industry --- affects of acoustic trauma [RAE-TR-FS-377] N82-21900
NOISE INTENSITY
  A study of the effects of fluctuation frequency on adverse reactions to noise [NPL-AC-97] N82-21892
NOISE REDUCTION
  Report on a visit to Canada of the 10-17 May 1980 Second International Symposium on Personal Hearing Protection in Industry --- affects of acoustic trauma [RAE-TR-FS-377] N82-21900
NOISE TOLERANCE
  Evaluation of certain indices used in experimental and field conditions to detect the effects of noise A82-25703
  Effect of white noise on the auditory cortex ultrastructure in rats A82-25711
  Effects of whole-body vibration and noise on the toxicity and risk parameters of chemical substances A82-25814
  Effects of acoustic stress on rat sensorimotor cortex morphology A82-27765
NONLINEAR SYSTEMS
  Sensitivity analysis as an aid in modelling and control of (poorly-defined) ecological systems --- closed ecological systems [NASA-CR-166308] N82-21095
NORADRENALINE
  Changes in the level of catecholamines in the noradrenaline-synthesizing structures of the rat brain following immobilization A82-27764
  /N-3/-noradrenaline release potentiated in a clonal nerve cell line by low-intensity pulsed magnetic fields A82-28099
NOSE (ANATOMY)
  Relationship between microflora and immunity of cosmonauts carrying staphylococcus aureus in the nasal cavity N82-20843
NUCLEAR MAGNETIC RESONANCE
  NMR-imagery - A new method of biophysical investigation A82-27745
  The chemical basis for the origin of the genetic code and the process of protein synthesis [NASA-CR-168748] N82-21868
NUCLEIC ACIDS
  A model for protocellular coordination of nucleic acid and protein syntheses A82-26583
  The current status of REH theory --- Random Evolutionary Hits in biological molecular evolution A82-28231
NUCLEOTIDES
  Comparative biosequence metrics --- molecular evolution A82-28230
NUTRIENTS
  Nutrients that modify brain function A82-25722
NUTRITION
  Dynamic of nutritional status during simulation of long-term aircraft flights N82-20846

O

OCULOMOTOR NERVES
  Corrective saccades - Effect of shifting the saccade goal A82-25647
  Bioengineering approach to the study of the oculomotor apparatus of the human visual analyzer A82-26798
ONTOGENY
  Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis A82-26602
  Hematopoietic tissue development in Japanese quail embryogenesis A82-27748
OPERATOR PERFORMANCE
  The influence of the seasonal factor and the intensity of work on the basic physiological functions of agricultural workers A82-25685
  Clinical characteristics of neurotic disorders in female long-distance telephone operators A82-25697
  The importance of pauses during work with vibrating tools A82-25698
  The effectiveness of vibration damping at the working positions on open-pit excavators at the Kursk magnetic anomaly A82-25699
  Physiological and hygienic characteristics of the work of open-hearth steel smelters A82-25700
  Physiological effects of low levels of vibration combined with local muscular exercise in the cutting of semiprecious stones A82-25701

Coagulopathy in miners with vibration sickness
A82-25704
Some characteristics of cardiovascular system activity and adaptive antihypoxic mechanisms in keyboard computer operators during the course of a work shift
A82-25705
Thermoregulation and morbidity in coal miners
A82-25815
Effects of emotional stress in bus drivers
A82-25819
Identification of the human operator in a closed-loop system
A82-26611
The transfer of failure-detection skills between monitoring and controlling dynamic systems
A82-26776
Simplicity in command and control systems - A human factors consideration --- for man computer interface design
A82-27222
The effect of the circadian rhythm of physiological functions on the mental work capacity of operators
A82-27769
Development of the hypothesis of the system quantization of behavior with reference to human work activity --- monotonous conveyor-belt task
A82-27798
Statistical optimization of interaction in man-machine systems
A82-28218
Design and validation of a tracking test for forming matched groups for continuous tracking experiments --- Book
A82-28393
The evaluation of information display on the basis of the transinformation --- German book
A82-28394

**OPTICAL ILLUSION**
Oculoparalytic illusion - Visual-field dependent spatial mislocalizations by humans partially paralysed with curare
A82-28250
Evidence for a boundary effect in roll vection
A82-28500

**OPTIMIZATION**
Statistical optimization of interaction in man-machine systems
A82-28218

**OPTOMETRY**
The wearing of hydrophilic contact lenses aboard a commercial jet aircraft. I - Humidity effects on fit
A82-26234

**ORGAN WEIGHT**
Effects of exercise adaptation on the age variation of human cardiac contractile function and left ventricular mass
A82-27785

**ORGANIC PHOSPHORUS COMPOUNDS**
Formation of pyrophosphate, tripolyphosphate, and phosphorylimidazole with the thioester, N, S-diacetylcysteamine, as the condensing agent --- molecular evolution
A82-28229

**ORGANIC SULFUR COMPOUNDS**
The combined use of sulfamonomethoxine and UV radiation in the treatment of chronic pneumonia
A82-25808

**ORTHOSTATIC TOLERANCE**
Impairment of orthostatic posture regulation in humans following closed craniocerebral injury
A82-25710
Hemodynamic responses in orthostasis following 5 hours of sitting
A82-26232

**OSTEOPOROSIS**
Radiographic evidence of disuse osteoporosis in the monkey /M. nemestrina/
A82-26924

**OTOLARYNGOLOGY**
Vestibular dysfunctions in caisson workers subjected to a combination of occupational hazards
A82-25609

**OTOLITH ORGANS**
Significance of vestibular asymmetry to genesis of vestibular dysfunction
N82-20850

**OVARIES**
Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity
[NASA-TM-76831] N82-21067

**OXIDATION**
Physical model of the initial stages of energy transformation during oxidative phosphorylation
A82-27738
Phosphorylating oxidation during changes in physiological condition
A82-27762

**OXYGEN CONSUMPTION**
Dynamics of aerobic work capacity and changes in the functional stability of the oxygen-supply mechanism and hypophysical adrenocortical system in skiers
A82-25696
Characteristics of oxygen metabolism in patients with chronic ischemic heart disease during physical exercise
A82-25806
Complex technique for studying the oxygen regimen and hemodynamics of the oral mucosa under hypoxia
A82-27789
Effect of sodium fluoroacetate on oxygen consumption in rat and cat liver tissue and skeletal muscles
A82-27808

**OXYGEN METABOLISM**
The energy supply of serotonin inactivation processes in the lungs
A82-25680
Characteristics of oxygen metabolism in patients with chronic ischemic heart disease during physical exercise
A82-25806
Ventilation and acid-base equilibrium for upper body and lower body exercise
A82-28402

**OXYGEN TENSION**
Dynamics of brain cell oxygen tension and electrical activity in the norm and in hypoxia
A82-25670
Instrumentation simultaneously measuring carbon dioxide excretion and oxygen uptake in humans using titration methods
A82-26819
A quantitative analysis of transcutaneous oxygen measurement
N82-20862
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
[NASA-TM-76793] N82-20864

**OZONE**
Cabin ozone and tropopause definition
N82-21151
Development and persistence of adaptation to ozone exposure in ozone-sensitive Southern California residents
[PB82-125899] N82-21809

## P

**PAIN**
Central pain mechanisms
A82-27708

**PAINTS**
Settlement of fouling organisms at the JITTES North Barnard Island raft site
[MRL-TN-450] N82-21070
Settlement of fouling organisms at the HMAS STIRLING raft site
[MRL-TN-461] N82-21071

**PARALYSIS**
Oculoparalytic illusion - Visual-field dependent spatial mislocalizations by humans partially paralysed with curare
A82-28250

**PARTIAL PRESSURE**
Arterial CO2 response to low levels of inspired CO2 in awake beagle dogs
A82-26815

**PATHOGENESIS**
Connection of motor regimes with morbidity in workers
A82-25695

Clinical characteristics of neurotic disorders in female long-distance telephone operators A82-25697

Coagulopathy in miners with vibration sickness A82-25704

PATHOLOGICAL EFFECTS

Phosphorylating oxidation during changes in physiological condition A82-27762

PATIENTS

Results of the treatment of patients with chronic bronchitis at health resorts in contrasting climatic zones during different seasons A82-25625

Hemodynamics and external respiration in patients with bronchial asthma at rest and during exercise A82-27791

PEPTIDES

Primary light-harvesting system: Phycobilisomes and associated membranes [DE81-028326] N82-21874

PERCEPTION

Subjective confidence in forecasts [AD-A109730] N82-21890

Diagnosticity and the base-rate effect [AD-A109731] N82-21891

PERFORMANCE TESTS

Design and validation of a tracking test for forming matched groups for continuous tracking experiments --- Book A82-28393

PERIODIC VARIATIONS

Effect of low ambient temperatures on sleep-wakefulness periodicity in lemming /Dicrostonyx torquatus/ A82-25824

Effects of periodization in the yearly training cycle on cardiac volume in young athletes A82-27779

Microdosimetric analysis of the variability of radiobiological effects in experiments with high-energy radiation --- in space A82-27810

PEROXIDES

Kinetics of lipid peroxidation in cellular organelle anoxia under different conditions A82-25809

PERSONALITY TESTS

Serial personality evaluations of repatriated U.S. Air Force southeast Asia POWs A82-26237

Relationship of personality factors and some social habits to cardiovascular risk in submariners A82-28487

PERSONNEL SELECTION

Follow-up of 14 abnormal electroencephalograms in asymptomatic U.S. Air Force Academy cadets A82-26242

PHARMACOLOGY

Effects of pharmacological agents on the development of hematic hypoxia A82-25720

Phenytoin - Ineffective against acute mountain sickness A82-26231

Contribution of the kallikrein-kinin system to microcirculation disorders in the case of immobilization stress A82-27787

The extraction and identification of drugs in aviation toxicology A82-28478

PHASE SHIFT

Altitude and hypoxia as phase shift inducers --- of human circadian rhythms A82-28480

PHASE TRANSFORMATIONS

Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change A82-27561

PHOSPHATES

Formation of pyrophosphate, tripolyphosphate, and phosphorylimidazole with the thioester, N,S-diacetylcysteamine, as the condensing agent --- molecular evolution A82-28229

PHOSPHORYLATION

Models for protocellular photophosphorylation A82-26596

Physical model of the initial stages of energy transformation during oxidative phosphorylation A82-27730

Phosphorylating oxidation during changes in physiological condition A82-27762

PHOTOCHEMICAL REACTIONS

Models for protocellular photophosphorylation A82-26596

Participation of pheophytin in primary electron transfer processes in the reaction centers of photosystem II --- photoreduction reactions of chlorophyll derivative A82-27786

PHOTOGRAPHY

Conceptual ergonomics: Early detection of field of vision restrictions by means of ergoscopy --- photography of scale models through endoscopes [DRIC-T-6253] N82-21899

PHOTORECEPTORS

Intraretinal recordings of slow electrical responses to steady illumination in monkey - Isolation of receptor responses and the origin of the light peak A82-25649

The magnetic susceptibility of rhodopsin A82-27729

PHOTOSYNTHESIS

Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis A82-26602

Antenna form of photosystem-2 chlorophyll in chloroplasts A82-27738

Higher plant response to elevated ultraviolet irradiance [NASA-CR-167530] N82-20828

Action spectra for photosynthetic inhibition N82-20831

Primary light-harvesting system: Phycobilisomes and associated membranes [DE81-028326] N82-21874

PHYSICAL EXERCISE

A bicycle-ergometer evaluation of the physical adjustment made by patients after an inner mitral commissurotomy A82-25690

Connection of motor regimes with morbidity in workers A82-25695

Dynamics of aerobic work capacity and changes in the functional stability of the oxygen-supply mechanism and hypophysical adrenocortical system in skiers A82-25696

Clinical and epidemiologic analysis of ischemic EKG responses to physical exercise in males A82-25707

The significance of chemoreceptor stimuli for the rate of switch-on and switch-off of the respiratory response to physical exercise A82-25713

Thyroid and hypophysial thyrotropic function in athletes during bicycle ergometer exercise A82-25716

Ultrastructural changes in skeletal muscle fibers under the influence of acute physical exercise A82-25717

The significance of the pulmonary gas-exchange response in physical exercise testing for the evaluation of the effectiveness of mitral commissurotomy A82-25805

Characteristics of oxygen metabolism in patients with chronic ischemic heart disease during physical exercise A82-25806

Electromyographic pattern of muscular activity during pushing-off and methods for its directed correction in young ski-jumpers on a trampoline A82-27776

Effects of increased carbohydrate resources on aerobic work capacity /Carbohydrate loading method/
A82-27777
Effects of exercise adaptation on the age variation of human cardiac contractile function and left ventricular mass
A82-27785
Hemodynamics and external respiration in patients with bronchial asthma at rest and during exercise
A82-27791
Ventilation and acid-base equilibrium for upper body and lower body exercise
A82-28482
Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity
[NASA-TM-76831] N82-21867

PHYSICAL FACTORS
The effect of the circadian rhythm of physiological functions on the mental work capacity of operators
A82-27769
Daily rhythms of physiological functions during shift work
A82-27771

PHYSICAL FITNESS
A model of the dynamics of athlete condition during the yearly cycle and its role in the management of training
A82-27780
The determination of overall physical endurance in athletes
A82-27781

PHYSICAL WORK
Vestibular dysfunctions in caisson workers subjected to a combination of occupational hazards
A82-25689
Computer analysis of tests involving physical stress --- in cardiology
A82-25807
Development of the hypothesis of the system quantization of behavior with reference to human work activity --- monotonous conveyor-belt task
A82-27798

PHYSICS
Physics and biology --- developments in biophysics
A82-26550

PHYSIOCHEMISTRY
The possible role of hydrogen bonds in the mechanism of muscular contraction
A82-27734

PHYSIOLOGICAL DEFENSES
Aspects of the body's defence mechanisms as protection against biological agents --- used in biological warfare
[DRIC-T-6433] N82-21886

PHYSIOLOGICAL EFFECTS
The energy supply of serotonin inactivation processes in the lungs
A82-25680
Expenditure of energy and the state of the neuromuscular system in athletes who use low-calorie diets to control their weight
A82-25688
Vestibular dysfunctions in caisson workers subjected to a combination of occupational hazards
A82-25689
The effectiveness of vibration damping at the working positions on open-pit excavators at the Kursk magnetic anomaly
A82-25699
Physiological effects of low levels of vibration combined with local muscular exercise in the cutting of semiprecious stones
A82-25701
Basis for the refinement of permissible levels of local vibration
A82-25702
Evaluation of certain indices used in experimental and field conditions to detect the effects of noise
A82-25703
The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration
A82-25721
Kinetics of lipid peroxidation in cellular organelle anoxia under different conditions
A82-25809
Changes in contractile protein composition and properties following space flight
A82-27728
Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress
A82-27731
Study of the viscosity of free and protein-bound membrane lipids
A82-27732
General characteristics of the development of the body's reaction to external stimuli
A82-27747
Mechanisms of the reaction of dividing cells to hypothermia
A82-27750
Mechanism for the antihypoxic effects of depakin
A82-27761
Effects of microwaves on acupuncture points under conditions of acute emotional stress in rabbits
A82-27763
Microiontophoretic analysis of the chemical sensitivity of neurons of the medial thalamus and ventromedial hypothalamus to acetylcholine in the case of immobilization-produced emotional stress in rats
A82-27770
Seventy-five days in space --- technical and medico-biological experiments
A82-27773
Electron-histochemical and functional evaluation of the effects of aspirin on the thrombocytes of healthy people and patients with ischemic heart disease
A82-27784
Effects of exercise adaptation on the age variation of human cardiac contractile function and left ventricular mass
A82-27785
Physiological criteria and methods for increasing the effectiveness of correction of hypoxic states
A82-27797
Meteorological radars as a source of microwave electromagnetic field energy and questions of environmental health
A82-27802
Comprehensive evaluation of the human functional state using ergometry
A82-27804
The information content of indicators of cerebral vascular responses to adequate influences
A82-28459
G stress on A-10 pilots during JAWS II exercises
A82-28479
Altitude and hypoxia as phase shift inducers --- of human circadian rhythms
A82-28480
Evidence for the involvement of central alpha2 mechanisms in intrathoracic volume expansion-induced diuresis - A study with clonidine and propranolol
A82-28481
Body composition data from the rat subjects of Cosmos 1129 experiment K-316
[NASA-CR-168670] N82-20832
Structural and functional properties, and energy metabolism of erythrocytes during space flights varying in duration
N82-20841
First All-Union Symposium on Problems of Evaluating and Forecasting Man's Functional States in Applied Physiology
N82-20859
Cognitive performance, sleep quality and mood during deep oxy-helium diving
[RPN-1/81] N82-21893

PHYSIOLOGICAL FACTORS
Physiological and hygienic characteristics of the work of open-hearth steel smelters
A82-25700
Physiological, hygienic and psychological questions in the adaptation of sailors to conditions of year-round arctic navigation
A82-27805

PHYSIOLOGICAL RESPONSES
Corrective saccades - Effect of shifting the saccade goal
A82-25647
Intraretinal recordings of slow electrical responses to steady illumination in monkey - Isolation of receptor responses and the origin of the light peak
A82-25649
The influence of the seasonal factor and the intensity of work on the basic physiological functions of agricultural workers
A82-25685
A bicycle-ergometer evaluation of the physical adjustment made by patients after an inner mitral commissurotomy
A82-25690
Clinical and epidemiologic analysis of ischemic EKG responses to physical exercise in males
A82-25707
The significance of chemoreceptor stimuli for the rate of switch-on and switch-off of the respiratory response to physical exercise
A82-25713
Reflexometry as an additional method of investigating hypoactivity in the thyroid gland
A82-25802
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness
A82-25804
Physiological, biochemical, and performance responses to a 24-hour crash diet
A82-26229
The diving response in clinical medicine
A82-26241
The physiology and hygiene of the individual protection of man from the cold --- Russian book
A82-26522
Some physiological mechanisms for the effects of the hypothalamus on erythron
A82-26753
Effect of breathing patterns on the perceived magnitude of added loads to breathing
A82-26813
Ventilatory adaptations to resistive loading during wakefulness and non-REM sleep
A82-26814
Arterial CO2 response to low levels of inspired CO2 in awake beagle dogs
A82-26815
General characteristics of the development of the body's reaction to external stimuli
A82-27747
Phosphorylating oxidation during changes in physiological condition
A82-27762
Trace reactions and the ambient temperature --- organism, organ and tissue thermoregulatory reactions
A82-28454
Some mechanisms of central inhibition
A82-28456
The contribution of V. N. Chernigovskii to the development of diving physiology and medicine
A82-28457
Ventilation and acid-base equilibrium for upper body and lower body exercise
A82-28482

PHYSIOLOGICAL TESTS
Thermoregulation and morbidity in coal miners
A82-25815
Development of the hypothesis of the system quantization of behavior with reference to human work activity --- monotonous conveyor-belt task
A82-27798
Multiplication noise in the human visual system at threshold. I - Quantum fluctuations and minimum detectable energy
A82-28114
The information content of indicators of cerebral vascular responses to adequate influences
A82-28459

PHYSIOLOGY
First All-Union Symposium on Problems of Evaluating and Forecasting Man's Functional States in Applied Physiology
N82-20859

PILOT PERFORMANCE
Physiological, biochemical, and performance responses to a 24-hour crash diet
A82-26229
Hemodynamic responses in orthostasis following 5 hours of sitting
A82-26232
G-tolerance enhancement - Straining ability comparison of aircrewmen, nonaircrewmen, and trained centrifuge subjects
A82-26233
Mode of flight and a mathematical model of pilot activity relating to flight-vehicle control
A82-27513
Problems of the operational medical in-flight monitoring of pilots
A82-27760
G stress on A-10 pilots during JAWS II exercises
A82-28479
USSR Report: Space biology and aerospace medicine, volume 16, no. 1, January - February 1982
[JPRS-80323]
N82-20834
Correlation between individual distinctions of functional asymmetry of cerebral hemispheres and pilot performance
N82-20844
Influence of orientation method on quality of pilot's spatial orientation
N82-20845
Dynamic of nutritional status during simulation of long-term aircraft flights
N82-20846
Some features of evaluation of work capacity and fatigue in helicopter pilots
N82-20847
Physiological and hygienic rating of transport helicopter vibration damper
N82-20848

PILOT TRAINING
Pilot judgment - Training and evaluation
A82-26777

PITS (EXCAVATIONS)
The effectiveness of vibration damping at the working positions on open-pit excavators at the Kursk magnetic anomaly
A82-25699

PITUITARY GLAND
Dynamics of aerobic work capacity and changes in the functional stability of the oxygen-supply mechanism and hypophysical adrenocortical system in skiers
A82-25696
Thyroid and hypophysial thyrotropic function in athletes during bicycle ergometer exercise
A82-25716
Adaptive changes in the rat hypophysical-adrenal system upon altitude hypoxia
A82-27772

PLANKTON
Patterns of bacterioplankton growth in the sea
N82-20860

PLANT STRESS
Plant response to solar ultraviolet radiation
A82-26582

PLANTS (BOTANY)
Plant response to solar ultraviolet radiation
A82-26582
Mechanism of the natural oscillations of water metabolism in plants
A82-27742
Participation of pheophytin in primary electron transfer processes in the reaction centers of photosystem II --- photoreduction reactions of chlorophyll derivative
A82-27746
Higher plant response to elevated ultraviolet irradiance
[NASA-CR-167538]
N82-20828
Protective mechanisms and acclimation to solar ultraviolet-B radiation in Oenothera stricta
N82-20830
Action spectra for photosynthetic inhibition
N82-20831
Genetic engineering possibilities for CELSS: A bibliography and summary of techniques
[NASA-CR-166306]
N82-20876

PLETHYSMOGRAPHY
A practical ultrasonic plethysmograph
A82-28486
PNEUMONIA
The combined use of sulfamonomethoxine and UV radiation in the treatment of chronic pneumonia
A82-25800
POLAROGRAPHY
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
[NASA-TM-76793] N82-20864
POLLEN
Higher plant response to elevated ultraviolet irradiance
[NASA-CR-167538] N82-20828
The ultraviolet radiation environment of pollen and its effect on pollen germination
N82-20829
POLYPEPTIDES
Formation of peptides from amino acids by single or multiple additions of ATP to suspensions of nucleoproteinoid microparticles
A82-26597
POSITION (LOCATION)
Final-position of a single degree-of-freedom tendon arm
A82-25619
POSITION ERRORS
Design and validation of a tracking test for forming matched groups for continuous tracking experiments --- Book
A82-28393
POSTURE
Impairment of orthostatic posture regulation in boxers following closed craniocerebral injury
A82-25710
PREDICTION ANALYSIS TECHNIQUES
Subjective confidence in forecasts
[AD-A109730] N82-21890
PRESSURE BREATHING
Evidence for the involvement of central alpha2 mechanisms in intrathoracic volume expansion-induced diuresis - A study with clonidine and propranolol
A82-28481
Positive pressure breathing as a means of preventing adverse reactions to antiorthostatic position
N82-20842
PRESSURE CHAMBERS
Comparative evaluation of pressure chamber conditioning and man's adaptation to hypoxia at high altitude
N82-20853
PRODUCTION PLANNING
A study of interactive control scheduling and economic assessment for robotic systems
[NASA-CR-166652] N82-20878
PROGNOSIS
The prognostic significance of electrocardiotopogram parameters in macrofocal myocardial infarction
A82-27703
PROJECT PLANNING
Guidelines for man-machine interface design
[VTT-RR-23/81] N82-21906
PROPHYLAXIS
Phenytoin - Ineffective against acute mountain sickness
A82-26231
Beta adrenergic blocking agents to control hypertension in aviation personnel
A82-28490
An examination of the feasibility of administering prophylactic pyridostigmine by the percutaneous route
[ARL-TN-449] N82-21878
PROSTHETIC DEVICES
Research and development of a versatile portable speech prosthesis
[NASA-CR-168741] N82-21897
PROTECTIVE CLOTHING
The physiology and hygiene of the individual protection of man from the cold --- Russian book
A82-26522
The possibility of maintaining the temperature and work capacity of the extremities
A82-27806
Testing and evaluation of the US Navy supplied air suit
[LA-8727-MS] N82-20877
Evaluation of the NBC overgarments manufactured by Seyntex Belgium --- chemical warfare
[PML-1980-33] N82-21905
PROTEIN SYNTHESIS
A model for protocellular coordination of nucleic acid and protein syntheses
A82-26583
Formation of peptides from amino acids by single or multiple additions of ATP to suspensions of nucleoproteinoid microparticles
A82-26597
The current status of REH theory --- Random Evolutionary Hits in biological molecular evolution
A82-28231
The chemical basis for the origin of the genetic code and the process of protein synthesis
[NASA-CR-168740] N82-21868
PROTEINOIDS
A model for protocellular coordination of nucleic acid and protein syntheses
A82-26583
Formation of peptides from amino acids by single or multiple additions of ATP to suspensions of nucleoproteinoid microparticles
A82-26597
PROTEINS
The interaction of alpha-actinin and tropomyosin with F-actin
A82-27727
Molecular events basic to cellular radiation response
[DE81-029813] N82-21875
PROTOBIOLOGY
A model for protocellular coordination of nucleic acid and protein syntheses
A82-26583
Copolyamino acid fractionation and protobiochemistry
A82-26589
How life began --- international symposium
A82-28094
Symbiosis in cell evolution: Life and its environment on the early earth --- Book
A82-28113
PSYCHOLOGICAL EFFECTS
An introduction to disaster - Some considerations of a psychological nature
A82-26236
Subjective confidence in forecasts
[AD-A109730] N82-21890
A study of the effects of fluctuation frequency on adverse reactions to noise
[NPL-AC-97] N82-21892
PSYCHOLOGICAL FACTORS
Effects of emotional stress in bus drivers
A82-25819
Physiological, hygienic and psychological questions in the adaptation of sailors to conditions of year-round arctic navigation
A82-27805
Computer-Managed Instruction in Navy Technical training: An attitudinal survey
[AD-A109664] N82-20871
PSYCHOLOGICAL TESTS
Syncope in aircrew
A82-26238
PSYCHOMETRICS
Serial personality evaluations of repatriated U.S. Air Force southeast Asia POWs
A82-26237
PSYCHOMOTOR PERFORMANCE
Comments on the theory for the accuracy of rapid motor acts of Schmidt et al
A82-25691
Systemic brain activity /Experimental investigation/ --- Russian book
A82-26547
Sleep loss, recovery sleep, and military performance
A82-28025
PSYCHOPHYSICS
Perceived rate of movement depends on contrast
A82-25648
Effect of breathing patterns on the perceived magnitude of added loads to breathing
A82-26813

PSYCHOPHYSIOLOGY
- Comments on the theory for the accuracy of rapid motor acts of Schmidt et al A82-25691
- A psychophysiological analysis of the memory changes undergone by humans in adapting to new climatic and geographic conditions A82-25694
- Evaluation of certain indices used in experimental and field conditions to detect the effects of noise A82-25703
- Motion and vision. IV - Isotropic and anisotropic spatial responses A82-28115
- Female and male size, strength and performance: A review of current literature [AD-A109270] N82-20868

PUBLIC HEALTH
- Experience with the development and practical introduction of operational reference levels for radiation safety A82-25817
- Use of mathematical modeling for the determination of allowable quantities of chemical fibers in clothing A82-25818
- First All-Union Symposium on Problems of Evaluating and Forecasting Man's Functional States in Applied Physiology N82-20859

PULMONARY CIRCULATION
- The significance of the pulmonary gas-exchange response in physical exercise testing for the evaluation of the effectiveness of mitral commissurotomy A82-25805
- The role of calcium in the activity of the smooth muscles of the pulmonary veins A82-26756
- Respiratory and inert gas exchange during high-frequency ventilation A82-26817

PULMONARY FUNCTIONS
- Equipment for artificial pulmonary ventilation and inhalation anesthesia A82-25822
- Protective effects of unsaturated fatty acids in adrenaline pulmonary edema and hypobaric hypoxia /The biological significance of catecholamine hyperlipidemia/ A82-27786
- Ventilation and acid-base equilibrium for upper body and lower body exercise A82-28402

PULMONARY LESIONS
- Sarcoidosis in aircrew A82-26240

PURSUIT TRACKING
- The transfer of failure-detection skills between monitoring and controlling dynamic systems A82-26776

Q

QUALITY CONTROL
- A test facility for the objective measurement of circumaural hearing protector attenuation [RAE-TM-FS-379] N82-21902

QUANTITATIVE ANALYSIS
- Microdosimetric analysis of the variability of radiobiological effects in experiments with high-energy radiation --- in space A82-27810

R

RADIANT HEATING
- Athermal submillimeter-microwave biological effects A82-26865

RADIATION DAMAGE
- The effectiveness of various radio-protective agents in protecting the germ cells of male mice against the genetic effects of radiation. II - The incidence of reciprocal translocations in irradiated spermatogonia A82-25681
- Mitotic activity and chromosome aberrations in the regenerated liver of rats after irradiation by X rays A82-25811
- Role of immobilization of irradiated rats in the protective effect of bone marrow shielding [NASA-TM-76828] N82-21066

RADIATION DOSAGE
- Dose loads to personnel engaged in the preparation of radioisotope thickness gages A82-25816
- Experience with the development and practical introduction of operational reference levels for radiation safety A82-25817
- Microdosimetric analysis of the variability of radiobiological effects in experiments with high-energy radiation --- in space A82-27810
- The dynamics of rat bone marrow CFUc content during prolonged fractionated irradiation A82-27811
- The ultraviolet radiation environment of pollen and its effect on pollen germination N82-20829
- Hematological lesions as a function of dosage of long-term radiation N82-20857

RADIATION EFFECTS
- Athermal submillimeter-microwave biological effects A82-26865
- Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes A82-27788
- The combined effects of ionizing radiation and certain other environmental factors /Review of the literature/ A82-27794
- Mathematical modeling and analysis of death dynamics in irradiated mouse populations A82-27809
- Higher plant response to elevated ultraviolet irradiance [NASA-CR-167530] N82-20828
- The ultraviolet radiation environment of pollen and its effect on pollen germination N82-20829
- Protective mechanisms and acclimation to solar ultraviolet-B radiation in Oenothera stricta N82-20830
- Action spectra for photosynthetic inhibition N82-20831
- Hematological lesions as a function of dosage of long-term radiation N82-20857
- Investigation of radiofrequency radiation effects on excitable tissues [AD-A109813] N82-21873

RADIATION HAZARDS
- Dose loads to personnel engaged in the preparation of radioisotope thickness gages A82-25816
- Effect of radioprotective agents on reactivity to space flight factors N82-20835

RADIATION MEDICINE
- The effectiveness of various radio-protective agents in protecting the germ cells of male mice against the genetic effects of radiation. II - The incidence of reciprocal translocations in irradiated spermatogonia A82-25681
- The therapeutic application of heterologous serum globulin against the acute radiation sickness of mice A82-25684
- Molecular events basic to cellular radiation response [DE81-029813] N82-21875

RADIATION PROTECTION
- The indication of radiation resistance modified by radio-protective agents. III - Analysis of the relationship between hypoxic and radio-protective effects in the rat bone marrow for hypoxias of different origin A82-25682

Potentiation of the protective effect of sulfur-containing radioprotectors --- against gamma rays
A82-25683

RADIATION SHIELDING
Role of immobilization of irradiated rats in the protective effect of bone marrow shielding
[NASA-TM-76828] N82-21866

RADIATION SICKNESS
The therapeutic application of heterclogous serum globulin against the acute radiation sickness of mice
A82-25684

RADIATION THERAPY
The therapeutic application of heterclogous serum globulin against the acute radiation sickness of mice
A82-25684

RADIATION TOLERANCE
The indication of radiation resistance modified by radio-protective agents. III - Analysis of the relationship between hypoxic and radio-protective effects in the rat bone marrow for hypoxias of different origin
A82-25682
Plant response to solar ultraviolet radiation
A82-26582

RADIOACTIVE ISOTOPES
Dose loads to personnel engaged in the preparation of radioisotope thickness gages
A82-25816

RADIOBIOLOGY
Potentiation of the protective effect of sulfur-containing radioprotectors --- against gamma rays
A82-25683
Determination of the bacterial endotoxin content of the blood of irradiated animals and humans
A82-25700
Mitotic activity and chromosome aberrations in the regenerated liver of rats after irradiation by X rays
A82-25811
Dose loads to personnel engaged in the preparation of radioisotope thickness gages
A82-25816
Experience with the development and practical introduction of operational reference levels for radiation safety
A82-25817
Athermal submillimeter-microwave biological effects
A82-26865
The combined effects of ionizing radiation and certain other environmental factors /Review of the literature/
A82-27794
Meteorological radars as a source of microwave electromagnetic field energy and questions of environmental health
A82-27802
Mathematical modeling and analysis of death dynamics in irradiated mouse populations
A82-27809

RADIOGRAPHY
Radiographic evidence of disuse osteoporosis in the monkey /M. nemestrina/
A82-26924

RAFTS
Settlement of fouling organisms at the JITTER North Barnard Island raft site
[MRL-TN-450] N82-21870
Settlement of fouling organisms at the HMAS STIRLING raft site
[MRL-TN-441] N82-21871

RANDOM PROCESSES
The current status of REM theory --- Random Evolutionary Hits in biological molecular evolution
A82-28231

RARE GASES
Respiratory and inert gas exchange during high-frequency ventilation
A82-26817

RATIONS
Dynamic of nutritional status during simulation of long-term aircraft flights
N82-20846

RATS
Activity of some rat liver enzymes following flight aboard Cosmos-936 biosatellite
N82-20854
Catecholamine content of rat blood after flight aboard Cosmos-936 biosatellites
N82-20855
Role of immobilization of irradiated rats in the protective effect of bone marrow shielding
[NASA-TM-76828] N82-21866
Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity
[NASA-TM-76831] N82-21867

RECEPTORS (PHYSIOLOGY)
The state of alpha 1- and beta 1-adrenergic reactions upon cold acclimatization
A82-26752
Some neurophysiological correlates of visual perception
A82-28455

RECORDING INSTRUMENTS
Complex technique for studying the oxygen regimes and hemodynamics of the oral mucosa under hypoxia
A82-27789

REFLEXES
Reflexometry as an additional method of investigating hypoactivity in the thyroid gland
A82-25802
Regulation of heart rhythm in depressor baroreflex
A82-25812

REGENERATION (PHYSIOLOGY)
Regeneration of skeletal muscle after mechanical trauma in reptiles
A82-27767

RELAXATION (PHYSIOLOGY)
Oxygen, carbon dioxide and the calcium control of relaxation mechanisms in cerebral artery smooth muscles
A82-26754

RELIABILITY ANALYSIS
Design and validation of a tracking test for forming matched groups for continuous tracking experiments --- Book
A82-28393

RENAL FUNCTION
Ion regulating function of human kidneys during long-term space flights and in model studies
N82-20840

REPRODUCTION (BIOLOGY)
Population mechanisms of adapting to extreme environmental conditions /with Clethrionomys glareolus Schreb considered as an example/
A82-25692
Morphometrical investigations on the reproductive activity of the ovaries in rats subjected to immobilization and to motion activity
[NASA-TM-76831] N82-21867

RESPIRATION
Hemodynamics and external respiration in patients with bronchial asthma at rest and during exercise
A82-27791

RESPIRATORS
Equipment for artificial pulmonary ventilation and inhalation anesthesia
A82-25822

RESPIRATORY DISEASES
Thermoregulation and morbidity in coal miners
A82-25815
Results of the treatment of patients with chronic bronchitis at health resorts in contrasting climatic zones during different seasons
A82-25825
Effects of short-term intermittent air pollutants on incidence and severity of acute respiratory disease: Data collection and quality assurance
[PB82-129479] N82-21887

RESPIRATORY PHYSIOLOGY
The significance of chemoreceptor stimuli for the rate of switch-on and switch-off of the respiratory response to physical exercise
A82-25713
Cardiorespiratory assessment of 24-hour crash-diet effects on altitude, +Gz, and fatigue tolerances
A82-26228
Phosphorylating oxidation during changes in physiological condition
A82-27762

The determination of overall physical endurance in athletes
A82-27781
Physiological criteria and methods for increasing the effectiveness of correction of hypoxic states
A82-27797
RESPIRATORY RATE
The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration
A82-25721
Modulation of human sinus node function by systemic hypoxia
A82-26812
Arterial CO2 response to low levels of inspired CO2 in awake beagle dogs
A82-26815
RESPIRATORY REFLEXES
The significance of chemoreceptor stimuli for the rate of switch-on and switch-off of the respiratory response to physical exercise
A82-25713
The diving response in clinical medicine
A82-26241
Effect of breathing patterns on the perceived magnitude of added loads to breathing
A82-26813
Ventilatory adaptations to resistive loading during wakefulness and non-REM sleep
A82-26814
Tissue chemoreceptors
A82-28453
RESPIRATORY SYSTEM
The nature of autonomic effects produced by sombrevin --- during narcosis
A82-25693
Respiratory and inert gas exchange during high-frequency ventilation
A82-26817
Tissue chemoreceptors
A82-28453
REST
Hemodynamics and external respiration in patients with bronchial asthma at rest and during exercise
A82-27791
RETINA
Corrective saccades - Effect of shifting the saccade goal
A82-25647
Intraretinal recordings of slow electrical responses to steady illumination in monkey - Isolation of receptor responses and the origin of the light peak
A82-25649
Reception of retinol in rat retinas - Various molecular forms
A82-25687
RETINAL IMAGES
Fading of stabilized retinal images
A82-28116
RETINENE
Reception of retinol in rat retinas - Various molecular forms
A82-25687
RHEOENCEPHALOGRAPHY
Rheoencephalographic signs of inadequate cerebral blood supply in incipient cerebrovascular insufficiency
A82-27755
RHEOLOGY
Expansion of the experimental possibilities of evaluating cardiac output by means of integral rheography using a high-pass filter
A82-25677
RHYTHM (BIOLOGY)
Regulation of heart rhythm in depressor baroreflex
A82-25812
Effects of physical factors in the environments on the diurnal and seasonal periodicity of bronchial asthma attacks
A82-27795
Stress and biological rhythms
N82-20837
RIBONUCLEIC ACIDS
The content of RNA in structures of the autonomic nervous system of rabbits under acute emotional stress
A82-27759

Molecular relationships between closely related strains and species of nematodes
A82-28228
Molecular events basic to cellular radiation response
[DE81-029813] N82-21875
RISK
Effects of whole-body vibration and noise on the toxicity and risk parameters of chemical substances
A82-25814
ROBOTS
A study of interactive control scheduling and economic assessment for robotic systems
[NASA-CR-168652] N82-20878
An overview of artificial intelligence and robotics. Volume 2: Robotics
[NASA-CR-168727] N82-21896
ROOT-MEAN-SQUARE ERRORS
The evaluation of information display on the basis of the transinformation --- German book
A82-28394
ROTATION
Human tolerance of rotation at different levels of hypergravity
N82-20852

S

SACCADIC EYE MOVEMENTS
Corrective saccades - Effect of shifting the saccade goal
A82-25647
SAFETY FACTORS
Problems of the development of life support and safety assurance system for space crews
A82-27518
SALYUT SPACE STATION
Principal results of medical studies carried out during long-term manned flights in the Salyut 6-Soyuz-Progress orbital complex
A82-27512
Seventy-five days in space --- technical and medico-biological experiments
A82-27773
SCALE MODELS
Models and mockups as design aids, revision A
[AD-A109511] N82-20881
Conceptual ergonomics: Early detection of field of vision restrictions by means of ergoscopy --- photography of scale models through endoscopes
[DRIC-T-6253] N82-21899
SCENE ANALYSIS
Mobility aid for the blind
[NASA-CR-168731] N82-21894
SCHEDULING
A study of interactive control scheduling and economic assessment for robotic systems
[NASA-CR-168652] N82-20878
SEA ROUGHNESS
Human reaction to low frequency motion: Preliminary studies --- slip motion and sea roughness
[RAE-TM-FS-365] N82-21884
SEA WATER
Patterns of bacterioplankton growth in the sea
N82-20860
SEIZURES
Follow-up of 14 abnormal electroencephalograms in asymptomatic U.S. Air Force Academy cadets
A82-26242
SELF OSCILLATION
Mechanism of the natural oscillations of water metabolism in plants
A82-27742
SELF STIMULATION
Self-stimulation response as an anti-stress factor in animals
A82-27799
SENSITIVITY
Sensitivity analysis as an aid in modelling and control of (poorly-defined) ecological systems --- closed ecological systems
[NASA-CR-166308] N82-21895
SENSORIMOTOR PERFORMANCE
Effects of emotional stress in bus drivers
A82-25819

Effects of acoustic stress on rat sensorimotor cortex morphology
A82-27765

SENSORY STIMULATION
The significance of chemoreceptor stimuli for the rate of switch-on and switch-off of the respiratory response to physical exercise
A82-25713
General characteristics of the development of the body's reaction to external stimuli
A82-27747
Some mechanisms of central inhibition
A82-28456

SEROTONIN
The energy supply of serotonin inactivation processes in the lungs
A82-25600
Serotonin and histamine metabolism in cosmonauts
N82-20858

SERUMS
The therapeutic application of heterologous serum globulin against the acute radiation sickness of mice
A82-25684

SERVOCONTROL
Final-position of a single degree-of-freedom tendon arm
A82-25619

SHOCK (PHYSIOLOGY)
Basic principles of hypoxia control during shock
A82-25676

SICKNESSES
Use of a constant magnetic field for the treatment of vibration sickness
A82-27796

SIGNS AND SYMPTOMS
Rheoencephalographic signs of inadequate cerebral blood supply in incipient cerebrovascular insufficiency
A82-27755

SITTING POSITION
Hemodynamic responses in orthostasis following 5 hours of sitting
A82-26232

SKIN (ANATOMY)
Method for the determination of muscle cross-sectional area and dermato-adipose layer thickness using ultrasonic scanning
A82-27778
An examination of the feasibility of administering prophylactic pyridostigmine by the percutaneous route
[NBL-TN-449] N82-21078

SKIN TEMPERATURE (BIOLOGY)
A quantitative analysis of transcutaneous oxygen measurement
N82-20862

SLEEP
Diurnal rhythm of sleep and wakefulness in arctic suslik /Citellus parryi/ during summer season
A82-25823
Effect of low ambient temperatures on sleep-wakefulness periodicity in lemming /Dicrostonyx torquatus/
A82-25824
Ventilatory adaptations to resistive loading during wakefulness and non-REM sleep
A82-26816

SLEEP DEPRIVATION
Sleep loss, recovery sleep, and military performance
A82-28025

SOCIAL FACTORS
Relationship of personality factors and some social habits to cardiovascular risk in submariners
A82-28487

SODIUM COMPOUNDS
Effect of sodium fluoroacetate on oxygen consumption in rat and cat liver tissue and skeletal muscles
A82-27808

SOLAR RADIATION
Plant response to solar ultraviolet radiation
A82-26502

SOYBEANS
Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis
A82-26602

SOYUZ SPACECRAFT
Principal results of medical studies carried out during long-term manned flights in the Salyut 6-Soyuz-Progress orbital complex
A82-27512

SPACE FLIGHT STRESS
Principal results of medical studies carried out during long-term manned flights in the Salyut 6-Soyuz-Progress orbital complex
A82-27512
Changes in contractile protein composition and properties following space flight
A82-27728
Effects of space flight factors at the cellular level - Results of the Cytos experiment
A82-28405
USSR Report: Space biology and aerospace medicine, volume 16, no. 1, January - February 1982
[JPRS-80323] N82-20834
Effect of radioprotective agents on reactivity to space flight factors
N82-20835
Stress and biological rhythms
N82-20837
Structural and functional properties, and energy metabolism of erythrocytes during space flights varying in duration
N82-20841
Relationship between microflora and immunity of cosmonauts carrying staphylococcus aureus in the nasal cavity
N82-20843
Activity of some rat liver enzymes following flight aboard Cosmos-936 biosatellite
N82-20854

SPACE PERCEPTION
Oculoparalytic illusion - Visual-field dependent spatial mislocalizations by humans partially paralyzed with curare
A82-28250
Results of studies of cosmonauts' vestibular function and spatial perception
N82-20838
Correlation between individual distinctions of functional asymmetry of cerebral hemispheres and pilot performance
N82-20844
Influence of orientation method on quality of pilot's spatial orientation
N82-20845

SPACEBORNE EXPERIMENTS
Principal results of medical studies carried out during long-term manned flights in the Salyut 6-Soyuz-Progress orbital complex
A82-27512
Effects of space flight factors at the cellular level - Results of the Cytos experiment
A82-28405
USSR Report: Space biology and aerospace medicine, volume 16, no. 1, January - February 1982
[JPRS-80323] N82-20834

SPACECRAFT ENVIRONMENTS
Influence on urea hydrolysis of typical microflora of urine and pressurized habitats
N82-20856

SPACECREWS
Problems of the development of life support and safety assurance system for space crews
A82-27518

SPATIAL DISTRIBUTION
Display-control compatibility in 3-D displays. 1: Effects of orientation
[AD-A109491] N82-20875

SPATIAL FILTERING
Some neurophysiological correlates of visual perception
A82-28455

**SPECTRAL SENSITIVITY**
Comparison of flicker-photometric and flicker-threshold spectral sensitivities while the eye is adapted to colored backgrounds
A82-28123

**SPEECH**
Research and development of a versatile portable speech prosthesis
[NASA-CR-168741] N82-21897

**SPINAL CORD**
Central pain mechanisms
A82-27788

**SPINE**
Significance of bone density to spinal trauma related to pilot ejection
N82-20849

**STAPHYLOCOCCUS**
The bactericidal activity of various clothing fabrics and dressing materials
A82-27801
Relationship between microflora and immunity of cosmonauts carrying staphylococcus aureus in the nasal cavity
N82-20843

**STATISTICAL ANALYSIS**
Statistical optimization of interaction in man-machine systems
A82-28210

**STATISTICAL DECISION THEORY**
Diagnosticity and the base-rate effect
[AD-A109731] N82-21891

**STATISTICAL MECHANICS**
Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change
A82-27561

**STEREOSCOPY**
Perception of spatial features with stereoscopic displays
[AD-A110191] N82-21882

**STRESS (PHYSIOLOGY)**
Basis for the refinement of permissible levels of local vibration
A82-25702
Ultrastructural changes in skeletal muscle fibers under the influence of acute physical exercise
A82-25717
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness
A82-25804
Kinetics of lipid peroxidation in cellular organelle anoxia under different conditions
A82-25809
Damage to the Ca/2+/-transporting system in the sarcoplasmic reticulum of the heart during emotional and nociceptive stress
A82-25810
Effect of air ions on the ratio between direct and reverse electron transport in mitochondria under stress
A82-27731
The participation of adrenergic mechanisms in microcirculation changes under stress
A82-27757
Contribution of the kallikrein-kinin system to microcirculation disorders in the case of immobilization stress
A82-27787
Suction-type EEG electrodes with a remote vacuum pump for stress testing
A82-27800
Comprehensive evaluation of the human functional state using ergometry
A82-27804
The information content of indicators of cerebral vascular responses to adequate influences
A82-28459
Stress and biological rhythms
N82-20837
F/FB-111 ejection experience (1967-1980). Part 1: Evaluation and recommendations
[AD-A110199] N82-21879
Recording basic climatic parameters and their processing into integrated heat stress indices
[DRIC-T-6292] N82-21885

**STRESS (PSYCHOLOGY)**
Effects of emotional stress in bus drivers
A82-25819
An introduction to disaster - Some considerations of a psychological nature
A82-26236
Serial personality evaluations of repatriated U.S. Air Force southeast Asia POWs
A82-26237
The content of RNA in structures of the autonomic nervous system of rabbits under acute emotional stress
A82-27759
Effects of microwaves on acupuncture points under conditions of acute emotional stress in rabbits
A82-27763
Changes in the level of catecholamines in the noradrenaline-synthesizing structures of the rat brain following immobilization
A82-27764
Microionophoretic analysis of the chemical sensitivity of neurons of the medial thalamus and ventromedial hypothalamus to acetylcholine in the case of immobilization-produced emotional stress in rats
A82-27770
Incidence of ischemic heart disease and arterial hypertension in sedentary workers
A82-27793
Self-stimulation response as an anti-stress factor in animals
A82-27799

**STRIATION**
Localization of adeninenucleotides in striated fibers of skeletal muscles
A82-27733

**SUBMARINES**
Relationship of personality factors and some social habits to cardiovascular risk in submariners
A82-28487

**SUBMILLIMETER WAVES**
Athermal submillimeter-microwave biological effects
A82-26865

**SUITS**
Testing and evaluation of the US Navy supplied air suit
[LA-8727-MS] N82-20877

**SULFUR COMPOUNDS**
Potentiation of the protective effect of sulfur-containing radioprotectors --- against gamma rays
A82-25443

**SUMMER**
Diurnal rhythm of sleep and wakefulness in arctic suslik /Citellus parryi/ during summer season
A82-25823

**SURGERY**
A bicycle-ergometer evaluation of the physical adjustment made by patients after an inner mitral commissurotomy
A82-25690
The significance of the pulmonary gas-exchange response in physical exercise testing for the evaluation of the effectiveness of mitral commissurotomy
A82-25805
Mechanisms for the adaptive and trophic effects of the sympathetic nervous system on cerebral vessels and tissue
A82-28458

**SYMBIOSIS**
Symbiosis in cell evolution: Life and its environment on the early earth --- Book
A82-20113

**SYMPATHETIC NERVOUS SYSTEM**
Mechanisms for the adaptive and trophic effects of the sympathetic nervous system on cerebral vessels and tissue
A82-28458

**SYNCOPE**
Syncope in aircrew
A82-26238

**SYNTHETIC FIBERS**
Use of mathematical modeling for the determination of allowable quantities of chemical fibers in clothing
A82-25818

**SYSTEM FAILURES**
The transfer of failure-detection skills between monitoring and controlling dynamic systems
A82-26776

**SYSTEM IDENTIFICATION**
Identification of the human operator in a closed-loop system
A82-26611

**SYSTEMS ANALYSIS**
Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller
A82-25632
A bilocal model of a dissipative structure --- in ecosystems
A82-27726

**SYSTEMS ENGINEERING**
Simplicity in command and control systems - A human factors consideration --- for man computer interface design
A82-27222

**SYSTEMS SIMULATION**
System simulation applied to the evaluation of displays for guidance and control
[ESA-TT-659] N82-20883

**SYSTEMS STABILITY**
Fading of stabilized retinal images
A82-28116

## T

**TACHYCARDIA**
The diving response in clinical medicine
A82-26241

**TECHNOLOGY ASSESSMENT**
New trends in the development of aerospace medical technology
A82-27515

**TELEOPERATORS**
Control system analysis and synthesis for a six degree-of-freedom universal Force-Reflecting Hand Controller
A82-25632

**TELEPHONES**
Clinical characteristics of neurotic disorders in female long-distance telephone operators
A82-25697

**TEMPERATURE EFFECTS**
Effects of high ambient temperature on athlete adaptation to muscular activity
A82-25706
Effect of low ambient temperatures on sleep-wakefulness periodicity in lemming /Dicrostonyx torquatus/
A82-25824
Study of the viscosity of free and protein-bound membrane lipids
A82-27732
Trace reactions and the ambient temperature --- organism, organ and tissue thermoregulatory reactions
A82-28454

**TENDONS**
Final-position of a single degree-of-freedom tendon arm
A82-25619
Tennis elbow in aviators
A82-26243

**TEST FACILITIES**
A test facility for the objective measurement of circumaural hearing protector attenuation
[RAE-TM-FS-379] N82-21902

**TETRAPHENYLS**
Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes
A82-27744

**THALAMUS**
Neurophysiological basis for determining the biological significance of acoustic stimuli
A82-25719
Microionophoretic analysis of the chemical sensitivity of neurons of the medial thalamus and ventromedial hypothalamus to acetylcholine in the case of immobilization-produced emotional stress in rats
A82-27770

**THERAPY**
Main trends in combatting oxygen hunger
A82-25686
Results of the treatment of patients with chronic bronchitis at health resorts in contrasting climatic zones during different seasons
A82-25825

**THERMAL STRESSES**
Thermoregulatory responses in the rat to exercise in the heat following prolonged heat exposure
A82-26818

**THERMOREGULATION**
Thermoregulation and morbidity in coal miners
A82-25815
The physiology and hygiene of the individual protection of man from the cold --- Russian book
A82-26522
Thermoregulatory responses in the rat to exercise in the heat following prolonged heat exposure
A82-26818
The possibility of maintaining the temperature and work capacity of the extremities
A82-27806
Trace reactions and the ambient temperature --- organism, organ and tissue thermoregulatory reactions
A82-28454

**THICKNESS**
Method for the determination of muscle cross-sectional area and dermato-adipose layer thickness using ultrasonic scanning
A82-27778

**THORAX**
Evidence for the involvement of central alpha2 mechanisms in intrathoracic volume expansion-induced diuresis - A study with clonidine and propranolol
A82-28481

**THREE DIMENSIONAL MOTION**
Determining the instantaneous direction of motion from optical flow generated by a curvilinearly moving observer
[AD-A109566] N82-20874

**THRESHOLDS (PERCEPTION)**
Multiplication noise in the human visual system at threshold. I - Quantum fluctuations and minimum detectable energy
A82-28114
Comparison of flicker-photometric and flicker-threshold spectral sensitivities while the eye is adapted to colored backgrounds
A82-28123

**THROMBOCYTES**
Electron-histochemical and functional evaluation of the effects of aspirin on the thrombocytes of healthy people and patients with ischemic heart disease
A82-27784

**THYROID GLAND**
Thyroid and hypophysial thyrotropic function in athletes during bicycle ergometer exercise
A82-25716
Reflexometry as an additional method of investigating hypoactivity in the thyroid gland
A82-25802

**TIBIA**
Radiographic evidence of disuse osteoporosis in the monkey /M. nemestrina/
A82-26924

**TIME RESPONSE**
The importance of pauses during work with vibrating tools
A82-25698

**TIME SERIES ANALYSIS**
Determining the instantaneous direction of motion from optical flow generated by a curvilinearly moving observer
[AD-A109566] N82-20874

**TISSUES (BIOLOGY)**
Hematopoietic tissue development in Japanese quail embryogenesis
A82-27748
Regeneration of skeletal muscle after mechanical trauma in reptiles
A82-27767
Tissue chemoreceptors
A82-28453
Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission
[NASA-TM-76793] N82-20864

Investigation of radiofrequency radiation effects on excitable tissues
[AD-A109813] N82-21873
TOCOPHEROL
Evaluation of the antioxidant system of the body
A82-25709
TOLERANCES (PHYSIOLOGY)
General characteristics of the development of the body's reaction to external stimuli
A82-27747
Female and male size, strength and performance: A review of current literature
[AD-A109270] N82-20868
Report on a visit to Canada of the 10-17 May 1980 Second International Symposium on Personal Hearing Protection in Industry --- affects of acoustic trauma
[RAE-TM-FS-377] N82-21900
TOXIC HAZARDS
National toxicology program
[GPO-85-397] N82-20865
Testing and evaluation of the US Navy supplied air suit
[LA-8727-MS] N82-20877
TOXICITY
Effects of whole-body vibration and noise on the toxicity and risk parameters of chemical substances
A82-25814
TOXICITY AND SAFETY HAZARD
National toxicology program
[GPO-85-397] N82-20865
TOXICOLOGY
The extraction and identification of drugs in aviation toxicology
A82-28478
National toxicology program
[GPO-85-397] N82-20865
Environmental and health aspects of chloroform: A comprehensive bibliography of published literature, 1930 - 1981
[PB82-110115] N82-20870
TRACKING PROBLEM
Design and validation of a tracking test for forming matched groups for continuous tracking experiments --- Book
A82-28393
TRAINING ANALYSIS
Scientific-technical and organizational problems of cosmonaut training
A82-27503
TRAINING EVALUATION
Pilot judgment - Training and evaluation
A82-26777
TRANQUILIZERS
The effect of dipilodor, diazepam, pipolphen, and their combinations on the vasomotor reflex and respiration
A82-25721
TRANSFER OF TRAINING
Increase in jammed word intelligibility due to training of listeners
A82-26235
The transfer of failure-detection skills between monitoring and controlling dynamic systems
A82-26776
TROPOPAUSE
Cabin ozone and tropopause definition
N82-21151
TRYPTOPHAN
Nutrients that modify brain function
A82-25722
TUNNELING (EXCAVATION)
Vestibular dysfunctions in caisson workers subjected to a combination of occupational hazards
A82-25689
TURNING FLIGHT
Orientation perception during aircraft coordinated turns
[AIAA PAPER 82-0258] A82-27096

U

U.S.S.R. SPACE PROGRAM
Scientific-technical and organizational problems of cosmonaut training
A82-27503
ULTRASONIC RADIATION
Method for the determination of muscle cross-sectional area and dermato-adipose layer thickness using ultrasonic scanning
A82-27778
ULTRASONIC TESTS
The use of ultrasonic Doppler techniques in the diagnosis of arterial occlusions in the basis cerebri - A Doppler angiography study
A82-27756
A practical ultrasonic plethysmograph
A82-28486
ULTRASONIC WAVE TRANSDUCERS
Ultrasonic method for measuring of hepatic portal blood flow in rats under conditions of contact biomicroscopy
A82-27760
Ultrasonic blood flow imaging using correlation processing
N82-20861
ULTRAVIOLET MICROSCOPY
Localization of adeninnucleotides in striated fibers of skeletal muscles
A82-27733
ULTRAVIOLET RADIATION
The combined use of sulfamonomethoxine and UV radiation in the treatment of chronic pneumonia
A82-25808
Plant response to solar ultraviolet radiation
A82-26582
Effects of ultraviolet-B irradiances on soybean. IV - Leaf ontogeny as a factor in evaluating ultraviolet-B irradiance effects on net photosynthesis
A82-26602
Higher plant response to elevated ultraviolet irradiance
[NASA-CR-167538] N82-20828
The ultraviolet radiation environment of pollen and its effect on pollen germination
N82-20829
Protective mechanisms and acclimation to solar ultraviolet-B radiation in Oenothera stricta
N82-20830
Action spectra for photosynthetic inhibition
N82-20831
UNDERWATER EXPLOSIONS
The effects of underwater explosions on marine life in Shoalwater Bay, Queensland
[MRL-R-795] N82-21872
UNDERWATER PHYSIOLOGY
The contribution of V. N. Chernigovskii to the development of diving physiology and medicine
A82-28457
UNITED KINGDOM
A comparison of RAF and Italian aircrew: Anthropometric data
[RAE-TM-FS-367] N82-20882
UNIVERSE
Life in the Universe
[NASA-CP-2156] N82-20884
UREAS
Influence on urea hydrolysis of typical microflora of urine and pressurized habitats
N82-20856
URINE
Influence on urea hydrolysis of typical microflora of urine and pressurized habitats
N82-20856

V

VARIATIONS
A study of the effects of fluctuation frequency on adverse reactions to noise
[NPL-AC-97] N82-21892
VASCULAR SYSTEM
Seasonal vascular tension variations in patients with cerebral circulatory disorders under the conditions of an arid zone
A82-25715
Mathematical modeling of microhemodynamics in the resistant part of the regional vascular bed
A82-27790
VECTOR ANALYSIS
Determining the instantaneous direction of motion from optical flow generated by a curvilinearly moving observer
[AD-A109566] N82-20874

VEINS
The effects of systemic arterial and venous pressures on blood volume in the cerebral vessels A82-26755
The role of calcium in the activity of the smooth muscles of the pulmonary veins A82-26756

VENTILATION
Ventilatory adaptations to resistive loading during wakefulness and non-REM sleep A82-26814
Respiratory and inert gas exchange during high-frequency ventilation A82-26817

VERTICAL ORIENTATION
Evidence for a boundary effect in roll vection A82-28500

VESTIBULAR NYSTAGMUS
Vestibular dysfunctions in caisson workers subjected to a combination of occupational hazards A82-25689
Significance of vestibular asymmetry to genesis of vestibular dysfunction N82-20850
Optokinetic factors and development of seasickness symptoms N82-20851

VESTIBULAR TESTS
Conditioned feeding suppression in rats produced by cross-coupled and simple motions A82-26230
Results of studies of cosmonauts' vestibular function and spatial perception N82-20838

VESTIBULES
Significance of vestibular asymmetry to genesis of vestibular dysfunction N82-20850

VIBRATION
Physiological and hygienic rating of transport helicopter vibration damper N82-20848

VIBRATION DAMPING
The effectiveness of vibration damping at the working positions on open-pit excavators at the Kursk magnetic anomaly A82-25699
Physiological and hygienic rating of transport helicopter vibration damper N82-20848

VIBRATION EFFECTS
Basis for the refinement of permissible levels of local vibration A82-25702
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness A82-25804
Effects of whole-body vibration and noise on the toxicity and risk parameters of chemical substances A82-25814
Use of a constant magnetic field for the treatment of vibration sickness A82-27796

VIBRATION PERCEPTION
The importance of pauses during work with vibrating tools A82-25698
The effectiveness of vibration damping at the working positions on open-pit excavators at the Kursk magnetic anomaly A82-25699
Physiological effects of low levels of vibration combined with local muscular exercise in the cutting of semiprecious stones A82-25701
Coagulopathy in miners with vibration sickness A82-25704
Use of a constant magnetic field for the treatment of vibration sickness A82-27796

VIDEO DATA
A study of cerebral microvessels by means of automatic image analysis A82-27766

VIRUSES
Aspects of the body's defence mechanisms as protection against biological agents --- used in biological warfare [DRIC-T-6433] N82-21886

VISCOSITY
Study of the viscosity of free and protein-bound membrane lipids A82-27732

VISUAL FIELDS
Oculoparalytic illusion - Visual-field dependent spatial mislocalizations by humans partially paralyzed with curare A82-28250

VISUAL PERCEPTION
Bioengineering approach to the study of the oculomotor apparatus of the human visual analyzer A82-26798
Bilateral disturbances of the perception function of the brain in patients with unilateral disorders due to acute disturbances of the cerebral circulation A82-27753
Multiplication noise in the human visual system at threshold. I - Quantum fluctuations and minimum detectable energy A82-28114
Finding the illuminant direction A82-28117
Some neurophysiological correlates of visual perception A82-28455
A study of the human visual system in support of automated feature extraction [AD-A109139] N82-20867
Relative depth and local surface orientation from image motions [AD-A109565] N82-20873
Sourcebook of temporal factors affecting information transfer from visual displays [AD-A109907] N82-21880
Perception of spatial features with stereoscopic displays [AD-A110191] N82-21882
Human engineering guides to design of displays for underwater applications [AD-A110317] N82-21898

VISUAL PHOTOMETRY
Comparison of flicker-photometric and flicker-threshold spectral sensitivities while the eye is adapted to colored backgrounds A82-28123

VISUAL STIMULI
Intraretinal recordings of slow electrical responses to steady illumination in monkey - Isolation of receptor responses and the origin of the light peak A82-25649
Bilateral disturbances of the perception function of the brain in patients with unilateral disorders due to acute disturbances of the cerebral circulation A82-27753
Multiplication noise in the human visual system at threshold. I - Quantum fluctuations and minimum detectable energy A82-28114
Motion and vision. IV - Isotropic and anisotropic spatial responses A82-28115
Fading of stabilized retinal images A82-28116

VISUAL TASKS
The evaluation of information display on the basis of the transinformation --- German book A82-28394
Evidence for a boundary effect in roll vection A82-28500

VOICE COMMUNICATION
Increase in jammed word intelligibility due to training of listeners A82-26235
Research and development of a versatile portable speech prosthesis [NASA-CR-168741] N82-21897

W

WAKEFULNESS
Diurnal rhythm of sleep and wakefulness in arctic suslik /Citellus parryi/ during summer season
A82-25823
Effect of low ambient temperatures on sleep-wakefulness periodicity in lemming /Dicrostonyx torquatus/
A82-25824
Ventilatory adaptations to resistive loading during wakefulness and non-REM sleep
A82-26814

WATER
Mechanism of the natural oscillations of water metabolism in plants
A82-27742

WEIGHTLESSNESS
Body composition data from the rat subjects of Cosmos 1129 experiment K-316
[NASA-CR-168678] N82-20832
Results of studies of cosmonauts' vestibular function and spatial perception
N82-20838
Ion regulating function of human kidneys during long-term space flights and in model studies
N82-20840
Significance of vestibular asymmetry to genesis of vestibular dysfunction
N82-20850
Catecholamine content of rat blood after flight aboard Cosmos-936 biosatellites
N82-20855

WEIGHTLESSNESS SIMULATION
Positive pressure breathing as a means of preventing adverse reactions to antiorthostatic position
N82-20842

WEST GERMANY
Studies on the flight medical aspects of the German Lufthansa non-stop route from Frankfurt to Rio de Janeiro, part 1
[NASA-TM-76659] N82-20863

WHITE NOISE
Effect of white noise on the auditory cortex ultrastructure in rats
A82-25711
Effects of acoustic stress on rat sensorimotor cortex morphology
A82-27765

WORDS (LANGUAGE)
Increase in jammed word intelligibility due to training of listeners
A82-26235

WORK CAPACITY
The influence of the seasonal factor and the intensity of work on the basic physiological functions of agricultural workers
A82-25685
A bicycle-ergometer evaluation of the physical adjustment made by patients after an inner mitral commissurotomy
A82-25690
Connection of motor regimen with morbidity in workers
A82-25695
Dynamics of aerobic work capacity and changes in the functional stability of the oxygen-supply mechanism and hypophysical adrenocortical system in skiers
A82-25696
Basis for the refinement of permissible levels of local vibration
A82-25702
The effect of the circadian rhythm of physiological functions on the mental work capacity of operators
A82-27769
Daily rhythms of physiological functions during shift work
A82-27771
Effects of increased carbohydrate resources on aerobic work capacity /Carbohydrate loading method/
A82-27777
The possibility of maintaining the temperature and work capacity of the extremities
A82-27806
Some features of evaluation of work capacity and fatigue in helicopter pilots
N82-20847

WORK-REST CYCLE
The importance of pauses during work with vibrating tools
A82-25698
Daily rhythms of physiological functions during shift work
A82-27771
Sleep loss, recovery sleep, and military performance
A82-28025

WORKLOADS (PSYCHOPHYSIOLOGY)
Clinical characteristics of neurotic disorders in female long-distance telephone operators
A82-25697
Cockpit automation and workload reduction - Too much of a good thing
A82-26047
Some features of evaluation of work capacity and fatigue in helicopter pilots
N82-20847

WRIST
The possibility of maintaining the temperature and work capacity of the extremities
A82-27806

X

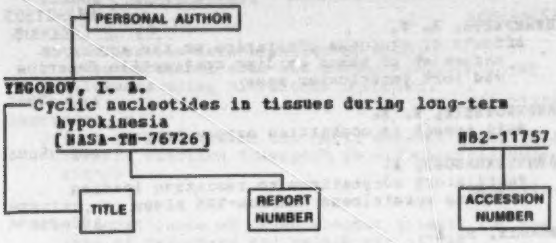
X RAY IRRADIATION
Mitotic activity and chromosome aberrations in the regenerated liver of rats after irradiation by X rays
A82-25811
Role of immobilization of irradiated rats in the protective effect of bone marrow shielding
[NASA-TM-76828] N82-21866

Y

YEAST
Microbial ecology of extreme environments: Antarctic dry valley yeasts and growth in substrate limited habitats
[NASA-CR-168742] N82-21869

# PERSONAL AUTHOR INDEX

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstact in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ABRAMOVICH-POLIAKOV, D. K.**
The permeability of the lymphatic vessels of the muscles of the upper extremities in vibration sickness
A82-25804

**ABROSOV, N. S.**
Theoretical and experimental analysis of material turnover in a closed microecosystem. I - Construction of a mathematical model
A82-25821

**AKHAVI, M. S.**
Follow-up of 14 abnormal electroencephalograms in asymptomatic U.S. Air Force Academy cadets
A82-26242

**AKHMEDOV, T. I.**
Effects of emotional stress in bus drivers
A82-25819

**AKHUNDOV, K. M.**
Effects of high ambient temperature on athlete adaptation to muscular activity
A82-25706

**AKOEV, I. G.**
Microdosimetric analysis of the variability of radiobiological effects in experiments with high-energy radiation
A82-27810

**AKUTSU, Y.**
Statistical mechanics of biomembrane phase transition. I - Excluded volume effects of lipid chains in their conformation change
A82-27561

**ALEKSEEV, O. V.**
Mathematical modeling of microhemodynamics in the resistant part of the regional vascular bed
A82-27790

**ALEKSEEV, S. I.**
Effects of a high-frequency electromagnetic field on tetraphenyl borate transport through bilayer lipid membranes
A82-27744

**ALEKSEEV, V. N.**
Some physiological mechanisms for the effects of the hypothalamus on erythron
A82-26753

**ALEKSEYEV, V. N.**
Results of studies of cosmonauts' vestibular function and spatial perception
N82-20838

**ALIKHANOVA, L. I.**
Effects of increased carbohydrate resources on aerobic work capacity /Carbohydrate loading method/
A82-27777

**ALLIK, T. A.**
Phosphorylating oxidation during changes in physiological condition
A82-27762

**ALMAZOV, V. A.**
Electron-histochemical and functional evaluation of the effects of aspirin on the thrombocytes of healthy people and patients with ischemic heart disease
A82-27784

**ALOV, I. A.**
Mechanisms of the reaction of dividing cells to hypothermia
A82-27750

**AMOSOVA, E. N.**
The prognostic significance of electrocardiotopogram parameters in macrofocal myocardial infarction
A82-27783

**ANANIN, V. F.**
Bioengineering approach to the study of the oculomotor apparatus of the human visual analyzer
A82-26798

Model of the mechanism of the regulation of the human cardiovascular system. I - Concerning the heart-regulation mechanism
A82-26799

**ANDERSON, R.**
Airline pilot disability - Economic impact of an airline preventive medicine program
A82-28489

**ANDREEV, O. A.**
The accuracy of laser diffraction measurements of sarcomere lengths in contracting muscles
A82-27737

**ANTONOVA, T. N.**
A model of the dynamics of athlete condition during the yearly cycle and its role in the management of training
A82-27780

**ARKHIPENKO, IU. V.**
Damage to the Ca/2+/-transporting system in the sarcoplasmic reticulum of the heart during emotional and nociceptive stress
A82-25810

**ARSENTIEV, A. N.**
Significance of bone density to spinal trauma related to pilot ejection
N82-20849

**ARTIUKHINA, N. I.**
Effect of white noise on the auditory cortex ultrastructure in rats
A82-25711

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago

**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 235)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in July 1982 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 201 reports, articles and other documents announced during July 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

**A82-11697 #** **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti)** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

# AEROSPACE MEDICINE AND BIOLOGY

## A Continuing Bibliography (Suppl. 235)

AUGUST 1982

## IAA ENTRIES

**A82-28606** **Mass mortality and its environmental and evolutionary consequences.** K. J. Hsü, Q. He, J. A. McKenzie, H. Weissert, K. Perch-Nielsen, H. Oberhänsli, K. Kelts (Zürich, Eidgenössische Technische Hochschule, Zurich, Switzerland), J. LaBrecque, L. Tauxe (Lamont-Doherty Geological Observatory, Palisades, NY), and U. Krähenbühl (Bern, Universität, Berne, Switzerland). *Science,* vol. 216, Apr. 16, 1982, p. 249-256. 46 refs. Swiss National Science Foundation Grant No. 2,650,0,80; NSF Grant No. OCE-81-19695.

The latest Mesozoic and earliest Tertiary sediments at Deep Sea Drilling Project site 524 provide an amplified record of environmental and biostratographic changes at the end of the Cretaceous. Closely spaced samples, representing time intervals as short as 100 or 1000 years, were analyzed for their bulk carbonate and trace-metal compositions, and for oxygen and carbon isotopic compositions. The data indicate that at the end of the Cretaceous, when a high proportion of the ocean's planktic organisms were eliminated, an associated reduction in productivity led to a partial transfer of dissolved carbon dioxide from the oceans to the atmosphere. This resulted in a large increase of the atmospheric carbon dioxide during the next 50,000 years, which is believed to have caused a temperature rise revealed by the oxygen-isotope data. The data indicate that many of the Cretaceous pelagic organisms became extinct over a period of a few tens of thousands of years, and do not contradict the scenario of cometary impact as a cause of mass mortality in the oceans, as suggested by an iridium anomaly at the Cretaceous-Tertiary boundary. (Author)

**A82-28925** # **Fuselage lights as a cause factor of vertigo in night formation flight - Perceiving pattern of fuselage light.** Z. Katoh (Japan Air Self-Defense Force, Aeromedical Laboratory, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 22, Sept. 1981, p. 125-142. 25 refs. In Japanese, with abstract in English.

**A82-29153** **A mathematical model of the dynamics of the inner ear.** M. H. Holmes (Rensselaer Polytechnic Institute, Troy, NY). *Journal of Fluid Mechanics,* vol. 116, Mar. 1982, p. 59-75. 14 refs.

A three-dimensional hydroelastic model of the dynamical motion in the cochlea is analyzed. The fluid is Newtonian and incompressible, and the basilar membrane is modelled as an orthotropic elastic plate. Asymptotic expansions are introduced, based on slender-body theory and the relative high frequencies in the hearing range, which reduce the problem to an eigenvalue problem in the transverse cross-section. After this, an example is worked out and a comparison is made with experiment and the earlier low-frequency theory. (Author)

**A82-29168** **A comparison of models to predict annoyance reactions to noise from mixed sources.** S. M. Taylor (McMaster University, Hamilton, Ontario, Canada). *Journal of Sound and Vibration,* vol. 81, Mar. 8, 1982, p. 123-138. 25 refs. Research supported by the Social Sciences and Humanities Research Council of Canada.

Many residential communities are exposed to environmental noise from a mixture of sources. A simple energy summation model provides a convenient method for predicting annoyance reactions in mixed source situations but there is research evidence that the validity of its application is questionable. In this paper various alternative models are discussed. Their predictive powers are compared by using noise and social survey data collected at residential sites in the vicinity of Toronto International Airport. Sites were purposely selected to represent a range of aircraft and road traffic noise combinations. Of the five models examined, the simple energy summation model gives the poorest prediction of average annoyance. The strongest predictions are achieved by using independent effects and energy difference models. The implications of the results for predicting annoyance reactions to mixed sources are considered. (Author)

**A82-29255** **An evaluation of the Nimrod Maritime Crew Trainer - A case study.** A. G. Parfitt (Ministry of Defence, London, England). *Aeronautical Journal,* vol. 86, Mar. 1982, p. 86-89.

A description is given of the approach adopted and experience gained in the RAF Maritime Crew Trainer for the Nimrod MR1 aircraft, with attention to methodological and practical problems encountered. The Nimrod long-range maritime patrol and ASW aircraft is extensively equipped with electronic and acoustic sensors, and its simulator complex comprises two parts: (1) a dynamic simulator, which provides full flight deck simulation for two pilots and flight engineer and incorporates a three-degree-of-freedom motion system, and (2) the maritime crew trainer, which replicates the tactical compartment of the rear fuselage. The two parts may be operated independently or linked together. The areas for assessment of the simulations conducted included communications, tactical planning and tactical plan execution, on-task reactions, and crew cooperation. The two experimental variables were exercise frequency, and the provision of additional feedback to crews regarding their performance. O.C.

**A82-29256** **An evaluation of some experimental data on the cost effectiveness of flight simulators.** C. G. Durose (RAF, Support Command, Brampton, Cumb., England). *Aeronautical Journal,* vol. 86, Mar. 1982, p. 90-93. 6 refs.

The Incremental Transfer Effectiveness Function (ITEF) method for the measurement of flight simulator training effectiveness is discussed in light of two studies, by Povenmire and Roscoe (1973) and Bickley (1980), which employed it. A realistic mathematical function is fitted to the data reported in the former study, and total training cost sensitivity is investigated. Explanations are given for the successes and difficulties encountered in the attempt to obtain actual RAF aircraft and simulator operating costs. It is recommended that future studies along the lines of Povenmire and Roscoe obtain accurate operating costs, and identify cost effective training mixes and investigate the sensitivity of total training cost to changes in the optimum mix. O.C.

**A82-29257** **The role of information feedback in aircrew training and its impact on the debriefing facilities.** W. L. Waag (RAF Support Command, Brampton, Cumb., England). *Aeronautical Journal,* vol. 86, Mar. 1982, p. 94-96.

The role of information feedback in aircrew training is discussed, with attention to the need for improved computer-based debriefing aids. Such debriefing systems must be able to recreate the salient events of a simulated sortie in an off-line mode, requiring no additional simulator time, and include crew actions, aircraft and systems responses to those actions, and the relationship of the simulated aircraft to its operational environment. In addition, the off-line replay facility should offer a range of data representation options involving both alphanumeric and graphic formats, and give the operating instructor the greatest possible flexibility in the selection and treatment of those portions of the sortie that he wishes to debrief, with freezes, speed-ups and slow-downs of the simulation. O.C.

**A82-29266** **The medical and public health challenge of space.** O. H. Loyd and K. J. O'Brien (Johns Hopkins University, Baltimore, MD). *Spaceflight*, vol. 24, May 1982, p. 205-207. 34 refs.

It is pointed out that the acquisition, monitoring, and interpretation of physiological processes during flight have generated many technical improvements in the quality and quantity of health care. The satellite monitoring of crops, ecological change, weather, and air and sea pollution is also cited as a tangible health benefit. Space biomedical research has led to laser surgical techniques, computer imaging, and the miniaturization of biomedical sensors. It is predicted that at medical facilities in space, which will be unencumbered by gravity and surrounded by the ultimate vacuum, new drugs, new medical and surgical techniques, and new research discoveries will occur. C.R.

**A82-29432** † **The mechanism of the interaction of the triplet state of porphyrins and phthalocyanines with electron acceptors (O mekhanizme vzaimodeistviia tripletnogo sostoianiia porfirinov i ftalotsianinov s aktseptorami elektrona).** I. V. Renge, V. A. Kuz'min, A. F. Mironov, and Iu. E. Borisevich (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki; Moskovskii Institut Tonkoi Khimicheskoi Tekhnologii, Moscow, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 263, Mar.-Apr. 1982, p. 143-146. 14 refs. In Russian.

**A82-29433** † **Structural features of the receptor cells of the saccular macula of the common frog (Strukturnye osobennosti retseptornykh kletok sakkuliarnoi makuly travianoi liagushki).** L. I. Tikhomirova (Akademiia Nauk SSSR, Institut Evoliutsionnoi Morfologii i Ekologii Zhivotnykh, Moscow, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 263, Mar.-Apr. 1982, p. 197-200. 8 refs. In Russian.

**A82-29434** † **The interaction of actin with phosphorylase kinase (Vzaimodeistvie aktina s kinazoi fosforilazy).** B. F. Poglazov, N. B. Livanova, and M. V. Ostrovskaia (Akademiia Nauk SSSR, Institut Biokhimii, Moscow, USSR). *Akademiia Nauk SSSR, Doklady*, vol. 263, Mar.-Apr. 1982, p. 221-224. 15 refs. In Russian.

An experimental study was performed to examine the effects of actin from rabbit skeletal muscles on the activity of phosphorylase kinase from rabbit muscles and liver. The results indicate that actin is a polyfunctional protein and is not only connected with the motor mechanism but has a more general significance in that it is a regulator of metabolic processes. In this regard, the polymerization capacity of actin is very important, since it makes possible a fine regulation of the quantity of its active form. B.J.

The linear dichroism of the light-induced changes in absorption observed upon the photoreduction of pheophytin, the primary electron acceptor in photosystem II reaction centers, in oriented subchroloroplast particles is measured in a study of the orientation of the transition dipole moment of the pigment. Absorption spectra of subchloroplast particles enriched in photosystem II and oriented in a polyacrylamide gel were determined using a beam of linearly polarized light oriented parallel and perpendicular to the extension axis of the gel. Comparison of the absorption spectra for chlororplasts containing reversibly photoreduced pheophytin reveals the presence of two spectral components, corresponding to the reduction of pheophytin to the anion radical and to a shortwave shift in the maximum of chlorophyll absorption. The transition dipole moment of the longwave absorption band of pheophytin is deduced to be nearly perpendicular to the thylakoid membrane, while that of the 545-nm band is nearly parallel to the membrane. The presence of actin-binding proteins in nonmuscular cells is investigated by means of affinity chromatography. Depolymerized actin from the skeletal muscle of the rabbit was immobilized on activated CNBr sepharose, then a solution of homogenized cattle brain extract was applied to the column. Elution of column-bound fractions with formamide produced fractions identified as tubulin as well as actin and other proteins. Purified tubulin is also found to interact with actin in solution, giving rise to a rapidly sedimenting form of actin. Results suggest the possibility of interactions between cellular microtubles, which are composed primarily of tubulin, and microfilaments, composed of actin. A.L.W.

A stochastic model of a manual control loop is proposed which assumes that the human operator (operating like a Kalman filter) can, within certain limits, adapt the gain coefficient and the time constant of the neuromuscular system to the parameters of the dynamic system and the environment. It is also assumed that the selection by the operator of the optimal parameters of the neuromuscular system is accomplished in accordance with the operator's proper functional performance criterion, which reflects requirements imposed on the stabilization of the system coordinates, the intensity of the operator's controlling actions, and the total control-related energy expenditure of the loop. The statistically optimal stabilization of a first-order dynamic system is considered as an example. B.J.

**A82-29551** **Chylomicron triglyceride metabolism in resting and exercising fed dogs.** R. L. Terjung, L. Budohoski, K. Nazar, A. Kobryn, and H. Kaciuba-Uscilko (Polish Academy of Sciences, Medical Research Centre, Warsaw, Poland). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Apr. 1982, p. 815-820. 23 refs.

Plasma triglyceride turnover and tissue uptake during periods of moderate exercise is investigated in dogs performing treadmill exercise after eating a meal high in corn oil. Plasma triglyceride turnovers were determined from the loss from the circulating plasma of (C-14)-palmitic acid-labeled chylomicron triglycerides injected prior to a 60-min treadmill run. Both during exercise and at rest, labeled triglyceride removal from the blood is found to conform to first-order kinetics, although the fractional removal rate was slightly greater during exercise. Fat and muscle biopsies show that, during rest, the uptake of the triglyceride by fat tissue was nearly five times greater than that by muscle, while during exercise triglyceride uptake was very similar in muscle and fat due to a significant increase in muscle uptake and a large but insignificant decrease in uptake by fat. Results suggest that circulating triglycerides could represent a potential source of fatty acids for beta oxidation in working muscle. A.L.W.

**A82-29552** **Respiratory muscle fatigue after marathon running.** J. Loke, D. A. Mahler, and J. A. Virgulto (Yale University, New Haven, CT). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Apr. 1982, p. 821-824. 27 refs.

The present investigation has the objective to evaluate respiratory muscle function in runners before and after completion of a marathon race. Respiratory muscle strength was assessed by measuring maximal inspiratory and expiratory pressures and transdiaphragmatic pressure during inspiratory capacity. Endurance of the respiratory system was determined by measuring maximal voluntary ventilation. Four healthy male subjects were used in the study. The results demonstrate that both strength and endurance characteristics of the respiratory muscles were decreased following completion of a marathon race. Although the mechanism for these changes is unclear, it is likely that the development of respiratory muscle fatigue may represent a more general muscular fatigue experienced with endurance exercise. **A82-29553** **Acclimatization to dry heat - Active men vs. active women.** D. H. Horstman and E. Christensen (U.S. Army, Research Institute of Environmental Medicine, Natick, MA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Apr. 1982, p. 825-831. 26 refs.

Six male and four female volunteers, who were unacclimatized to heat, served as subjects for the considered study. It was found that active women perform exercise of equal relative intensity in dry heat as well as active men. Moreover, active women acclimatized to exercise of equal relative intensity in dry heat at a faster rate to a greater extent than did active men. Ventilatory, metabolic, and cardiovascular differences between the sexes were minimal, and these measures were relatively stable throughout exercise on each day and among the days of acclimatization. Changes in plasma volume did not play a role in the acclimatization process for these active subjects. G.R.

Maher (U.S. Army, Research Institute of Environmental Medicine, Natick; Boston University, Boston, MA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Apr. 1982, p. 857-862. 31 refs.

The results of the discussed investigation indicate that after chronic altitude exposure, there is increased mobilization and utilization of free fatty acids (FFA) during exercise with associated sparing of muscle glycogen. These changes in metabolism during exercise may account for large increases in endurance observed during the first weeks at high altitude. Additional studies are recommended to determine whether this adaptation persists upon return to sea level. Eight healthy male soldiers participated in the investigation as subjects. Attention is given to resting serum FFA, serum lactate, glycerol, and aspects of glycogen utilization. G.R.

**A82-29557** **Role of the carotid chemoreceptors in regulation of inspiratory onset.** G. Bowes, S. M. Andrey, L. F. Kozar, and E. A. Phillipson (Toronto, University, Toronto, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, Apr. 1982, p. 863-868. 30 refs. Medical Research Council of Canada Grant No. MT-4606.

The present investigation has the objective to demonstrate the ability of the carotid chemoreceptors to mediate independent changes in expiratory time in the unanesthetized, spontaneously breathing dog. It is found that during vagal blockade a transient CO2 stimulus of small magnitude is able to advance the onset of inspiration and thus shorten expiratory time, independent of changes in tidal volume or inspiratory time. It is further shown that this effect is abolished following carotid body denervation. Five dogs were used in the investigation. The dogs had been prepared previously with both a permanent side-hole tracheostomy and bilateral cervical vagal loops. G.R.

**A82-29560** **Time course of ultrastructural changes in skeletal muscle after two types of exercise.** M. A. Nimmo and D. H.

Snow (Glasgow, University, Glasgow, Scotland). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Apr. 1982, p. 910-913. 19 refs. Research supported by the Horserace Betting Levy Board.

To ascertain the effects of sprint and endurance exercise on the time course of skeletal muscle mitochondrial changes, an ultrastructural study was conducted on four Thoroughbred horses. Skeletal muscle biopsies were taken at various intervals during and after the exercise. Transient mitochondrial alterations of varying degrees were observed following both types of exercise and were considered to be related to the development of fatigue. The degree of distortion of mitochondrial structure is considered not to represent the in vivo condition but the state of responsiveness to the fixation medium. (Author)

**A82-29562** **Hemodynamic responses to methoxamine in exercise-conditioned and aorta-constricted rats.** E. M. Hasser, R. T. Dowell, and J. L. Haithcoat (Oklahoma, University, Oklahoma City, OK). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Apr. 1982, p. 967-975. 28 refs. Grants No. NIH-HL-23025; No. NIH-HD-13127; No. NIH-HL-07430.

The results of the reported experiments illustrate the divergent hemodynamic responses of cardiovascular systems in exercise-conditioned and aorta-constricted animals when subjected to methoxamine administration. Major alterations seem to lie in the ability to maintain cardiac output in the face of increasing peripheral resistance. Directionally opposite hemodynamic results occur in exercise-conditioned and aorta-constricted animals when subjected to identical cardiovascular stresses. Experiments that amalgamate these two conditions, i.e., exercise conditioning and aortic constriction, should provide mechanistic identification of the beneficial cardiovascular effects of repetitive exercise. G.R.

**A82-29563** **Adaptive changes in cats after long-term exposure to various temperatures.** H. Hensel and M. Banet (Marburg, Universität, Marburg, West Germany). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Apr. 1982, p. 1008-1012. 19 refs. Research supported by the Deutsche Forschungsgemeinschaft.

Physiological and morphological adaptations developing upon prolonged exposure to the heat or the cold are investigated in cats exposed to 5 and 30 C for periods of over a year. Two groups of animals were first exposed to 5 or 30 C for 24 months, then the groups were switched and exposed to the alternative temperature for 36 months. Following the 36-month adaptation period, the cold-adapted cats showed increased fur growth and resting metabolic rates, a lowered threshold to the cold-induced metabolic response, and greater fur insulation at thermoneutrality than the warm-adapted cats. During acute exposure to -5 C, tissue insulation decreased in both groups, although fur insulation increased only in the warm-adapted cats. Norepinephrine given at thermally neutral ambient temperatures elicited nonshivering thermogenesis only in the cold-adapted animals. Despite the higher metabolic rate in the cold adapted animals, body weights did not differ between the groups, due to a corresponding increase in food consumption by the cold-adapted animals. A.L.W.

**A82-29564** **Effect of acid-base status on the kinetics of the ventilatory response to moderate exercise.** A. Oren, B. J. Whipp, and K. Wasserman (California, University, Medical Center, Torrance, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Apr. 1982, p. 1013-1017. 19 refs. Grants No. NIH-HL-11907; No. NIH-HL-07388.

An investigation was conducted to determine if an induced metabolic acidosis would speed the ventilatory kinetics during moderate muscular exercise and, conversely, whether metabolic alkalosis would slow the response. Five healthy male volunteers were studied. The obtained results demonstrate that metabolic acidosis, which is known to stimulate the carotid bodies, decreased the time constant of the ventilatory response to exercise during air breathing, whereas metabolic alkalosis appeared to slow the ventilatory response, although this did not attain statistical significance. G.R.

**A82-29568** **Theoretical analysis of optimal P50.** D. C. Willford, E. P. Hill, and W. Y. Moores (California, University, La Jolla; U.S. Veterans Administration Medical Center, San Diego, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Apr. 1982, p. 1043-1048. 25 refs. Research supported by the U.S. Veterans Administration; Grants No. NIH-5-I-32-HL-07212-05; No. NIH-HL-17731; No. NIH-K04-HL-00418.

A simple expression is derived to describe the partial pressure at 50% hemoglobin saturation with oxygen (P50) that maximizes venous oxygen tension - P(O2) - for a given arterial P(O2) and oxygen consumption. That 'optimal P50' also maximizes arteriovenous saturation differences for given arterial and venous P(O2) values. The optimal P50 can be expressed as the square root of the product of arterial and venous P(O2) values. Alternatively, it can be expressed as a simple function of the arterial P(O2) and the arteriovenous saturation difference. Nomograms summarize the relationships between the variables, and published observations that suggest an observational basis for theoretical analysis are reviewed. It is concluded that for normoxia or moderate hypoxia a high P50 is advantageous, whereas for more severe hypoxia or increased metabolic demands, a low P50 is advantageous. (Author)

**A82-29569** **Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves.** E. R. Adair (John B. Pierce Foundation Laboratory, New Haven, CT) and B. W. Adams (Yale University, New Haven, CT). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Apr. 1982, p. 1049-1058. 31 refs. Grant No. AF-AFOSR-77-3420.

The basic fact that microwave exposure can lower metabolic heat production has been previously demonstrated for the mouse by Ho and Edwards (1977) and for the rat by Phillips et al. (1975). The general conclusion drawn from both studies was that the metabolic reduction produced by microwave exposure was dose dependent. The present study extends the investigation into the effects of microwave exposure on metabolic heat production to a primate, the squirrel monkey. When squirrel monkeys are restrained in cool environments, body temperature is regulated by an increase in metabolic heat production. The results of the current study demonstrate that either brief or prolonged whole-body exposure to a microwave field will cause a reduction of this elevated heat production by an amount directly related to the microwave energy absorbed. Grants No. NIH-HL-17682; No. NIH-HL-07104.

Experiments to determine the effect of exhaustive exercise on the acid-base balance, O2 consumption, and cardiac output in dogs and pigs are described, along with possible applications of the results for humans. Eleven dogs and 11 Yucatan miniswine were subjected to treadmill exercise with silastic catheters implanted in the aortic arch and right ventricle. Work output, cardiac output, heart rate, blood constituents, aortic pressure, blood gas tensions, hematocrit, and plasma lactic acid were monitored. The animals were run to exhaustion on the machine in peak and steady-state exercise modes. Dogs displayed a greater work capacity than the pigs but could not sustain maximal capacity as long. A similarity was observed between metabolic acidosis in the pigs and previous human results, an occurrence that corresponded with exhaustion. O2 correlations were also present, and the data suggested that pigs and humans can perform more work with less O2 than can dogs. It is recommended that future endurance testing of animals as an indicator of human performance be carried out with pigs. M.S.K.

**A82-29572** **Chemoreceptor involvement in cortisol responses to hypoxia in ventilated dogs.** H. Raff, S. P. Tzankoff, and R. S. Fitzgerald (Johns Hopkins University; National Institutes of Health, National Institute of Aging, Baltimore, MD). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, Apr. 1982, p. 1092-1096. 14 refs. Grants No. NIH-HL-10342; No. NIH-HL-07199.

Changes in cortisol secretion rate (CSR) in response to hypoxic hypoxia (HH) and to carbon monoxide hypoxia (COH) were assessed in mongrel dogs that had intact chemoreceptors (INT); surgically deafferented carotid bodies (CBD) or aortic bodies (ABD); or both carotid and aortic chemoreceptors denervated (SAD). All dogs were anesthetized, paralyzed, ventilated, and maintained normocapnic. In the INT and ABD groups, CSR responded 'maximally' to HH, whereas in CBD and SAD animals, the CSR was attenuated but not eliminated. COH, which does not stimulate the carotid body, caused a submaximal increase in CSR regardless of chemoreceptor status. It is concluded that (1) the carotid bodies are the principal chemoreceptor influence on CSR during HH and (2) there is a nonchemoreceptor-mediated increase in CSR during hypoxia. (Author)

**A82-29574** **NMR imaging in medicine.** I. L. Pykett. *Scientific American,* vol. 246, May 1982, p. 78-88.

The theoretical and experimental foundations of nuclear magnetic resonance (NMR) for medical diagnosis are explored. Atomic nuclei possess electric charge which generates a magnetic field, and nuclei with a net zero detectable spin have an associated dipole, while uneven numbered nucleon atoms exhibit spin and can be detected by NMR spectroscopy. The measurement of the bulk magnetic field of an object immersed in a magnetic field and then subjected to another magnetic field at right angles to the first yields a relationship between the Larmor frequency, the natural processional frequency of the bulk nuclei, and the field strength, which is unique for each atomic species. Tipping the bulk magnetization vector results in a rise of the energy levels of the nuclei, which releases an electromotive signal. Application to human internal imaging is enhanced by the fact that humans are 75% water, and therefore have many hydrogen atoms. Exact conversion of the signal to an image is outlined, and the characterization of healthy NMR responses for later detection of disease onset is described. M.S.K.

**A82-29671** * **A model of human decisionmaking in multiple process monitoring situations.** J. S. Greenstein (Virginia Polytechnic Institute and State University, Blacksburg, VA) and W. B. Rouse (Georgia Institute of Technology, Atlanta, GA). *IEEE Transactions on Systems, Man, and Cybernetics,* vol. SMC-12, Mar.-Apr. 1982, p. 182-193. 17 refs. Grant No. NsG-2110.

It is proposed that human decisionmaking performance in multiple process monitoring situations can be modeled in terms of the detection of process related events and the allocation of attention among processes once events are felt to have occurred. An elementary pattern recognition technique, discriminant analysis, is used to generate estimates of event occurrence probability. A queueing theory framework is then utilized to incorporate these probabilities as well as other task characteristics into the solution of the attention allocation problem. The performance of the model is compared with that of subjects in two experiments. (Author)

**A82-29672** **Scheduling of parallel computation for a computer-controlled mechanical manipulator.** J. Y. S. Luh and C. S. Lin (Purdue University, West Lafayette, IN). *IEEE Transactions on Systems, Man, and Cybernetics,* vol. SMC-12, Mar.-Apr. 1982, p. 214-234. 18 refs. NSF Grant No. APR-77-14533.

The physical compactness of the microcomputer has made it feasible to mount the controller and the mechanical manipulator together as a single unit. By using a computer with multiple central processing units (CPU's), parallel computations may be executed to achieve a minimum computing time so that a real-time control is possible. The parallel processing system utilizes one CPU for each link of the manipulator. Because of the dynamic coupling between adjacent links, precedence relations appear among the subtasks to be executed in CPU's. Under the series-parallel precedence constraints a method of 'variable' branch-and-bound has been developed which determines an optimum ordered schedule for each of the CPU's. It consists of, alternatively, forward and backward search procedures with an aid of pushdown-stacks. In each forward search procedure, it seeks the currently feasible schedule with shorter computing time which updates the upper bound of the optimum schedule, while in each backward search procedure it discards those schedule-branches that will not provide improvements. A Fortran program has been written for a manipulator based on the Newton-Euler formulation of dynamic equations and is applied to the Stanford manipulator as an illustration. (Author)

stemy II). V. V. Klimov, S. I. Allakhverdiev (Akademiia Nauk SSSR, Institut Fotosinteza, Pushchino, USSR), V. A. Shuvalov, and A. A. Krasnovskii (Akademiia Nauk SSSR, Institut Biokhimii, Moscow, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 263, no. 4, 1982, p. 1001-1005. 15 refs. In Russian.

The role of manganese ions in the photoreduction of Q, the primary electron acceptor in the electron transport chain of photosystem II, is investigated. Preparations of pea chloroplast fragments were treated to remove up to 95% of the manganese contained within them, and photosystem II activity was evaluated according to the magnitude of reversible changes in chlorophyll fluorescence connected with the photoreduction of Q. The extraction of manganese is observed to lead to a suppression of photoinduced fluorescence changes which may be restored by the addition of micromolar amounts of Mn (+2) ions or 10 to the -8th molar amounts of MnCl2 in combination with various divalent metal ions. The amount of MnCl12 required corresponds to one atom of Mn per 110 chlorophyll molecules, or two atoms per one reaction center. Results indicate reactivation to be connected with the formation of stable Mn complexes in photosystem II active structures, which are capable of undergoing multiple reduction. A.L.W.

The effects of singlet oxygen generated by exogenous or endogenous retinal or an alternative exogenous source on retinal electrical activity and on the generation of peroxidized lipids in the photoreceptor membrane are investigated in a study of a possible mechanism for photoinduced retinal damage. Electroretinograms of isolated frog retinas in the presence of endogenous retinal or the photosensitizers methylene blue or trans-retinal show a decline in electrical activity following illumination. The addition of a quencher of singlet oxygen or inhibitors of free-radical oxidation is found to prevent the photosensitized damage to the retina whatever the photosensitizer. Results thus support a mechanism of photoinduced retinal damage involving the photoinduced conversion of rhodopsin to retinal and singlet oxygen, which then acts in the peroxidation of membrane lipids causing retinal damage. A.L.W.

**A82-29959** **Etiological aspects of in-flight discomforts (Aspects étiologiques des malaises en vol).** G. Leguay (Hôpital d'Instruction des Armées Dominique Larrey, Versailles, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 267-277. 8 refs. In French.

The statistical distributions and possible etiologies of non-incapacitating in-flight discomfort experienced by flight personnel are discussed. The unreliability of frequency statistics for in-flight discomfort is noted, and distributions of these events with respect to aircrew age, flight experience, and flight specialty are examined. The symptomology of in-flight discomforts, which take the forms of alterations in higher functions, psychological manifestations, behavior problems, asthenia, and sensory, cardiovascular, respiratory, digestive and nociceptive manifestations, is briefly reviewed, and the types of discomforts to which pilots are susceptible are indicated. Attention is then given to aeronautical factors, organic human factors, functional human factors including the tri-syndrome of vagotonia, spasmophilia and hypoglycemia, and psychological factors as agents important in the development of symptoms. The importance of multiple causative factors is emphasized, and the underlying physiological and psychological maladaptations giving rise to the observed syndromes are discussed. A.L.W.

**A82-29960** **Diabetes mellitus and the examination of flight personnel (Diabète sucré et expertise du personnel navigant).** A. Didier (Hôpital d'Instruction des Armées Val-de-Grâce, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 282-285. 18 refs. In French.

Questions of the initial selection and subsequent flight qualifications of flight personnel with diabetes mellitus are addressed. Hyperglycemic effects of the flight environment are examined. Attention is then given to the methods used by the French Air Force for the detection of diabetes in flight personnel, the prevalence of diabetes thus detected, which is significantly less than in the general population, and to the general characteristics of diabetic pilots, and techniques to be used to improve the detection of diabetic angiopathy are suggested. The influence of diabetes mellitus on the flight aptitude of air force personnel is then discussed, and the policy adopted in 1974 is reviewed, in which diabetes upon initial flight examination is disqualifying, however that developing during one's career is only disqualifying if it involves dangerous or inconvenient treatments or complications affecting aptitude. A.L.W.

**A82-29961** **Diabetes and flight personnel - Ophthalmologic aspects (Diabète et personnel navigant - Aspects ophtalmologiques).** J. P. Chevaleraud (Service de Santé des Armées, Paris, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 286-289. 5 refs. In French.

The role of the ophthalmologist in the detection and surveillance of flight personnel with diabetes is discussed. Diabetes is sometimes detected during regular ophthalmologic examinations or on the occasion of diabetic complications, and is evidenced by retinopathy involving microaneurisms, arterial and venous modifications, vascular proliferation originating at a vein, and signs of retinal injury including exudates, edema and hemorrhages. Paraclinical evaluation and surveillance methods for diabetics most frequently include fluorescein angiography, electrophysiological techniques, and tests of color perception, the central visual field, and glare sensitivity. By these means, the aeronautical ophthalmologist plays an important role in the determination of the flight qualifications of a diabetic aircrew member. A.L.W.

**A82-29962** **Sarcoidosis and aeronautical aptitude (Sarcoïdose et aptitude aéronautique).** A. Seigneuric, G. Leguay (Service de Santé des Armées, Paris, France), and J. de Bourayne (Hôpitaux des Armées, Paris, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 290, 291. In French.

Problems posed by sarcoidosis for the aeronautical aptitudes of flight personnel are discussed. Localizations of the granulomatous lesions which are well tolerated and pose no particular problems for prognosis or aptitude, such as cutaneous, hepatosplenic, peripheral ganglionic, osteoarticular or parotidean sites, are distinguished from those localizations embodying major risks to aptitude or life: pulmonary, nervous, ocular and cardiac sites and hypercalcemia. The questions of corticoid treatment and the consequent loss of flight aptitude are considered, and three stages at which a decision as to flight aptitude may be taken are distinguished. Finally, attention is given to possible techniques which may be used for the detection of latent lesions, which include electroencephalography and cerebral scintigraphy in the case of cerebral localizations, and continuous ambulatory electrocardiography, echocardiography and thallium scintigraphy in the case of cardiac localizations. A.L.W.

**A82-29963** **Current clinical approaches to mediastino-pulmonary sarcoidosis (Approches actuelles de la sarcoïdose mediastino pulmonaire en clinique).** J. Kermarec (Hôpital d'Instruction des Armées Percy, Clamart, Hauts-de-Seine, France), G. Haguenauer, D. Dormont, P. Allard, J. Heyraud, and P. Laffargue. *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 292-294. In French.

The clinical management of mediastino-pulmonary sarcoidosis is discussed in view of the frequency of this localization of the disease. Situations requiring histological confirmation of the diagnosis are pointed out, and the prognosis of the disease with and without corticosteroid therapy is considered. Indications for treatment are then discussed, with particular attention given to immunological depression, pulmonary lymphocytic activity, angiotensin conversion enzyme levels and results of gallium-67 scintigraphy. It is noted that such techniques allow the close monitoring of the progress of the disease as well as rational decisions with respect to therapy and patient capabilities. A.L.W.

**A82-29994** **Spontaneous pneumothorax in a military environment (Le pneumothorax spontané en milieu militaire).** G. Haguenauer, J. Karmarec, P. Allard, B. Epardeau, X. Foullon, and J. D. Heyraud (Hôpital d'Instruction des Armées Percy, Clamart, Hauts-de-Seine, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 294-297. In French.

The distribution, diagnosis, etiology and treatment of cases of spontaneous pneumothorax observed at a military hospital are discussed. Spontaneous pneumothorax is found to be more frequent in males aged 20-30, even when accounting for the age and sex composition of military personnel, and more often encountered during the winter. Most of the cases are accounted for by benign idiopathic pneumothorax, in patients of anthropometric indices characteristic of Marfan's syndrome, and did not occur subsequent to exertion. Radiology showed an equal distribution between the left and right lungs, a plurality of total pneumothorax over apical and parietal, and various radiological anomalies. Surgical intervention was necessary in 56 of the 123 cases seen, due to a recurrence of the condition following conservative treatment. Post-operative respiratory functions were found to be normal following a period of four months, and a recurrence was found in only one patient. A.L.W.

**A82-29995** **Idiopathic spontaneous pneumothorax and the examination of flight personnel (Pneumothorax spontané idiopathique et expertise du personnel navigant).** J. Droniou (Hôpital d'Instruction des Armées Val-de-Grâce, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 297-300. In French.

The etiology of idiopathic spontaneous pneumothorax is examined and discussed in relation to its occurrence in flight personnel. The pathogenesis of the apical pulmonary bubbles giving rise to the condition is considered, and mechanical and ischemic factors influencing the generation of the lesions are pointed out. Attention is then given to the frequency of idiopathic spontaneous pneumothorax in the aviation environment, the aeronautical factors influencing its onset, its incidence under flight conditions, which is unexpectedly low, and the question of recurrences, which occur in about 20 percent of the cases. The management of pneumothorax cases in flight personnel is then discussed, and the advantages of the surgical creation of a solid symphysis in preventing recurrences are pointed out. A.L.W.

**A82-29996** **Sickle cell anemia and aviation (Drépanocytose et aviation).** G. Leguay and A. Vauzelle (Hôpital d'Instruction des Armées Dominique Larrey, Versailles, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 304-308. In French.

Problems associated with the onset of sickling of the red blood corpuscles leading to thrombotic accidents under flight conditions in persons with sickle cell anemia are discussed. Clinical aspects of in-flight sickle-cell accidents are reviewed, with attention given to their frequency, age and sex distributions, flight conditions and types of hemoglobinopathies, pathology and outcome. The role of hypoxia in the induction of sickling and clinical manifestations observed in flight is examined based on observations of actual cases and pressure chamber simulations, in which a close relation between altitude and the risk of an accident has not been established, and flight factors other than hypoxia implicated in sickling are indicated. Recommendations concerning the flight qualification of homozygotic and heterozygotic carriers of the disease and the in-flight treatment and prevention of sickle-cell accidents are then presented. A.L.W.

**A82-29997** **Sequelae of spinal column traumas in aeronautical medicine (Les séquelles des traumatismes de la colonne vertébrale en médecine aéronautique).** R. P. Delahaye, R. Auffret, P. J. Metges, Mr. Chauvet, and A. Leger (Hôpital d'Instruction des Armées Dominique Larrey, Versailles; Hôpital d'Instruction des Armées Begin, Saint-Mandé, Val-de-Marne; Centre d'Essais en Vol, Brétigny-sur-Ogre, Essonne; Service de Santé des Armées, Paris, France). *(Journées Cliniques de Médecine Aéronautique, Versailles, France, Dec. 5, 6, 1980.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 3rd Quarter, 1981, p. 309-312. In French.

The etiology of and clinical manifestations of sequelae to spinal traumas suffered by persons engaging in aeronautical activities are examined. The majority of back traumas is noted to occur during emergency operations, particularly crash or forced landings, parachuting, ejection or rapid vibratory phenomena in fighter aircraft, with each situation exhibiting characteristic sets of localizations. Persons with these various types of back injuries fall into four categories: (1) those for which the spinal fracture is not detected, who exhibit localized back pain 3-6 months after the accident; (2) those with recognized and treated fractures presenting tardive pain upon resumption of flight activities; (3) those experiencing pain in the absence of clinical or radiological findings; and (4) those operated on for lumbar disk hernias or fractures. A.L.W.

**A82-30026** † **In the struggle for the health of sailors (V bor'be za zdorov'e moriakov).** B. G. Makarenko. *Voenno-Meditsinskii Zhurnal,* Feb. 1982, p. 7, 8. In Russian.

Activities undertaken by the medical personnel of the Pacific fleet ensuring the maintenance of sailor health are discussed. Attention is given to the duties of the ship's doctor, and to the support provided by the naval medical service in the forms of equipment, training and continuing education. The role of the medical advisory group, consisting of medical specialists from hospitals, the naval medical commission and hygiene and epidemiologic establishments, is also noted. A.L.W.

**A82-30028** † **Use of an active orthostatic test in aeromedical examinations (Ispol'zovanie aktivnoi ortostaticheskoi proby v praktike vrachebno-letnoi ekspertizy).** V. D. Vlasov, I. G. Dlusskaia, and A. S. Nekhaev. *Voenno-Meditsinskii Zhurnal,* Feb. 1982, p. 44-46. 13 refs. In Russian.

The suitability of an active orthostatic test as a method for the determination of individual cardiovascular functional characteristics is studied. Orthostatic tolerances were determined in the morning in 12 healthy men by an active orthostatic test, in which arterial pressure was determined by the ausculatory method in the lying position and following the assumption of a standing position, and by a passive test on a tilt table with measurements by tachooscillography of the brachial artery, sphigmogrammetry of the radial artery and electrocardiography. Whereas responses to the passive orthostatic test clustered around a value of 6.9 for the orthostatic index, a greater variability in responses to the active orthostatic test was found. Subsequent evaluation of physiological parameters during a passive orthostatic test conducted during the optimal working period of the day confirmed preliminary indications of a lowered tolerance in subjects exhibiting high orthostatic indexes on the active orthostatic test. Results demonstrate the diagnostic value of the simple active orthostatic test for applications in aeromedical examinations. A.L.W.

**A82-30029** † **The organization of blood transfusions and blood substitutes on board ships at sea (Organizatsiia perelivaniia krovi i krovezamenitelei na korabliakh v more).** V. D. Shevchenko and G. N. Zavgorodnii. *Voenno-Meditsinskii Zhurnal,* Feb. 1982, p. 46, 47. In Russian.

**A82-30030** † **The value of spiroergography in the diagnosis of the initial stage of cardiac insufficiency (Znachenie spiroergografii v diagnostike nachal'noi stadii serdechnoi nedostatochnosti).** V. I. Koledenok and K. I. Korytnikov. *Voenno-Meditsinskii Zhurnal,* Feb. 1982, p. 56-58. In Russian.

Spiroergography is evaluated as a possible noninvasive means for the detection of the initial stage of cardiac insufficiency during exercise in patients with ischemic heart disease. Measurements of oxygen consumption were compared with electrocardiography obtained during graded submaximal bicycle ergometer exercise in patients with ischemic heart disease and healthy controls. Results of spiroergography allowed the division of the patients into two groups: those exhibiting no signs of cardiac insufficiency during exercise and those in its initial stages. The first group is observed to exhibit a greater exercise tolerance, amount of work performed, exercise oxygen consumption, level of aerobic reserves, oxygen consumption per kg body weight, and oxygen consumption per heartbeat and less oxygen consumption per unit work performed than the second group, although values of these parameters were significantly exceeded by the controls. Results thus demonstrate the capacity of spiroergometry to distinguish between cardiac compensation and the initial stages of cardiac insufficiency in patients with ischemic heart disease. A.L.W.

**A82-30031** † **Perforated gastric and duodenal ulcers in servicemen (Probodnye iazvy zheludka i dvenadtsatiperstnoi kishki u voennosluzhashchikh).** G. N. Tsybuliak and V. N. Satsukevich. *Voenno-Meditsinskii Zhurnal,* Feb. 1982, p. 62-64. In Russian.

**A82-30032** † **Study of the simultaneous effects of hormones and radioprotectors in the exposure of animals to ionizing radiation (Issledovanie sovmestnogo deistviia gormonov i radioprotektorov pri ioniziruiushchem obluchenii zhivotnykh).** D. Benke, K. Bodo-Sekeikhidine, and A. Shanta. *Voenno-Meditsinskii Zhurnal,* Feb. 1982, p. 65-68. 14 refs. In Russian.

The effects of anabolic and related hormones, which act to suppress the inhibition of protein synthesis induced by ionizing radiation, in combination with radioprotective compounds on the survival of animals exposed to ionizing radiation are investigated. Survival rates were evaluated in mice exposed to 630 and 800 R (minimum lethal and absolute lethal doses) of X rays, or a dose of 750 R of gamma rays (the LD50) with preliminary or concurrent administration of the radioprotectors AET (S2-beta-aminoethylisothiuroniumbromide hydrobromide) and ixeprine (sodium bis-alpha-propynylglycyl disulfide) and the anabolic hormones nerobolyl (norandrostenolone phenylpropionate) and petabolyl (norandrostenolone decanoate) and the hormone retandrol (testosterone phenylpropionate). Whereas the single injection of an anabolic combined with a radioprotector is not seen to increase survival rates, their combined use is effective when the radioprotector is administered before radiation and anabolics are continued following irradiation. The best results are obtained with the hormone nerobolyl. A.L.W.

**A82-30033** † **The survival of dogs irradiated with lethal doses of gamma radiation under conditions of chemical radioprotection and subsequent therapy (Vyzhivaemost' letal'no gamma-obluchennykh sobak v usloviiakh khimicheskoi radiozashchity i posleduiushchei terapii).** P. Kuna, M. Dostal, and P. Petyrek. *Voenno-Meditsinskii Zhurnal,* Feb. 1982, p. 68, 69. 6 refs. In Russian.

The effectiveness of the intramuscular introduction of radioprotective substances and therapeutic substances in the increase of survival under exposure to ionizing radiation is investigated in dogs. Animals were exposed to a dose of 300 rad 15-20 min after the intramuscular injection of cystamine or a combination of cystamine with mexamine, and treated with vitamins, antibiotics and ferripolyglukine for 28 days following exposure. In experiments conducted in the summer, the use of radioprotective substances with therapy is not found to increase survival significantly with respect to the use of therapy alone. Therapy without radioprotectors is, however, ineffective in increasing survival under winter conditions, at temperatures of -6 C. In these conditions, only the combination of radioprotectors with therapy increased the number of surviving animals. A.L.W.

**A82-30296** * **The effect of abnormal cell proportion on specimen classifier performance.** K. R. Castleman and B. S. White (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *Cytometry,* vol. 2, no. 4, 1981, p. 155-158. NIH-supported research; Contract No. NAS7-100.

An analysis is presented of the results obtained from a cell classifier which is confronted with an abnormal/normal cell ratio which is different from the ratio assumed in the calibration of the classifier. False negative and false positive error rates are determined in advance for classifier operation, along with the necessary sample size in order to validate the predicted distributions. Changes are demonstrated to happen only regarding the false negative rate, where reductions in the abnormal cell rate below the expected rates would cause totally unreliable data. Substantial overproduction of abnormal cells would be quickly noticeable, while production rates beyond, but close to, the expected rates would only require more extensive sampling. Classifier systems for 10% proportions of abnormal cells are concluded to be possible, but difficulties are present with much lower rates. M.S.K.

**A82-30298** † **For a prolonged stay in space (Dlia dolgo prebyvaniia v kosmose).** I. Iudin (Federatsiia Kosmonavtiki SSSR, USSR). *Nauka i Tekhnika,* Jan. 1982, p. 6, 7. In Russian.

The techniques tested on Salyut-6 to counter the adverse effects of prolonged weightlessness on physiological functions are described. These techniques include the use of specially designed space suits, the use of treadmills and bicycle ergometers, and electrical stimulation of the muscles. B.J.

**A82-30301** † **Evidence for a biological clock.** V. Kiuchariants. *Soviet Life,* Jan. 1982, p. 58.

Mechanisms which influence the biologic rhythms of human cells and the possibility of controlling the alterations are discussed. Cells are known to delay splitting while repairs to DNA strands are occurring, and illness can be felt on a whole-person level when disruptions of internal rhythms have been induced by noise, changed daily schedules, and with the ingestion of narcotics. Increased cell fission rates increase the rate of onset of cell death. Some indications are present that the regulatory mechanism resides in the hypothalamus, although the resistance of the body to disease is asserted to reside in the integrity of cellular membranes. The membranes limit the distance that DNA strands may drift apart when damaged, thus increasing the opportunities for self-repair. M.S.K.

**A82-30302** † **Thermal shock and gene operation (Teplovoi shok i rabota genov).** M. B. Evgen'ev. *Khimiia i Zhizn',* June 1981, p. 14-19. In Russian.

Molecular processes occurring in the cell which serve to protect an organism from overheating are discussed. The discovery of puffs in the salivary gland giant chromosomes of drosophila which become apparent upon animal exposure to high temperatures is considered, and the isolation of the seven so-called thermal shock proteins corresponding to the nine sites of RNA synthesis signalled by the giant chromosome puffs is outlined. The question of the regulation of the genes expressing the thermal shock proteins is considered, and evidence for a gene responsible for the turning on and normal operation of the thermal shock system, possibly by some mechanism involving the mitochondria, is presented. Questions of the mechanism of action of the thermal shock proteins, which have been observed to bind to sites of former puffs on the chromosome and of the evolution and existence of such thermal protection mechanisms in different species are then considered. A.L.W.

**A82-30303** † **Under the hot sun (Pod solntsem goriachim).** F. F. Sultanov (Akademiia Nauk Turkmenskoi SSR, Institut Fiziologii i Eksperimental'noi Patologii Aridnoi Zony, Turkmen SSR). *Khimiia i Zhizn',* June 1981, p. 9-13. In Russian.

A discussion is presented on experience gained at the Institute of Physiology and Experimental Pathology of the Academy of Sciences of the Turkmenian SSR on the effects of heat and techniques of adaptation to conditions of desert heat. Particular consideration is given to a bicycle-ergometer simulator for adaptation to desert heat. B.J.

**A82-30786** **The role of protein phosphorylation in neutral and hormonal control of cellular activity.** P. Cohen (Dundee, University, Dundee, Scotland). *Nature,* vol. 296, Apr. 15, 1982, p. 613-620. 160 refs. Research supported by the Medical Research Council, British Diabetic Association, British Heart Foundation, and Cancer Research Campaign.

Current knowledge of the control of glycogen metabolism is reviewed, and the increasing body of evidence is presented that implicates many of the proteins involved in the control of glycogen metabolism in the regulation of other cellular activities. Neural control via calcium ions, hormonal control of glycogen metabolism by multi-site phosphorylation, and protein phosphatases involved in glycogen metabolism in skeletal muscle are discussed. The role of cyclic AMP-dependent protein kinase and of calmodulin in regulating enzyme activity are detailed. Various protein phosphatases involved in different cell functions are discussed. C.D.

**A82-30870** **Perception of suprathreshold stimuli during saccadic eye movement.** L. A. Riggs, R. K. Moore, A. G. Ellicott (Brown University, Providence, RI), and F. C. Volkmann (Smith College, Northampton, MA). *Vision Research,* vol. 22, no. 4, 1982, p. 423-428. 44 refs. Grant No. NIH-R01-EY-03180.

**A82-30871** **Evidence for transient luminance and quasi-sustained color mechanisms.** S. H. Schwartz and M. S. Loop (Alabama, University, Birmingham, AL). *Vision Research,* vol. 22, no. 4, 1982, p. 445-447. 14 refs. Grants No. NIH-R01-EY-03303; No. NIH-T32-EY-07703-3; No. NIH-P30-EY-03039.

Experimental results from an examination of perceptual temporal characteristics of luminance and color detection are reported. Light from a 12 V bulb was focused on the subject's pupil with the luminance being varied and measured by a photometer. The subjects pressed a telegraph key when any stimulus was perceived. Filters controlled the level of luminance and the color, and white noise was continuously supplied through earphones to mask shutter noise. Flashes at 620 and 460 nm elicited responses corresponding to color perception and generated histograms which were different from a pure luminance change. It was concluded that luminance threshold is governed by a transient visual mechanism while color perception is governed by a slower, quasi-sustained visual mechanism. Increasing the background intensity tended to create a situation where either color or luminance were equal detection stimuli in terms of quickness of response. M.S.K.

**A82-30872** **Contour curvature analysis - Hyperacuities in the discrimination of detailed shape.** R. J. Watt and D. P. Andrews (Keele, University, Keele, Staffs., England). *Vision Research,* vol. 22, no. 4, 1982, p. 449-460. 18 refs.

Curvature discrimination thresholds were measured for a wide range of stimulus curvatures and sizes. Results are compared with an ideal processor of curvature to provide relative efficiencies. The results lead to three major findings. (1) Curved lines may be processed with the same precision as straight lines for decisions of shape, demonstrating a new class of hyperacuity. (2) High relative efficiencies are obtained for all curved lines with an orientation range of less than 40 deg. (3) This performance is not however consistent with common processing for straight and curved lines. The results are discussed, and two or possibly three separate processes are suggested as the basis for detailed shape perception. (Author)

**A82-30873** **The effect of convergence on the vestibulo-ocular reflex and implications for perceived movement.** R. B. Post and H. W. Leibowitz (Pennsylvania State University, University Park, PA). *Vision Research,* vol. 22, no. 4, 1982, p. 461-465. 17 refs. Grants No. NIH-MH-08061; No. NIH-EY-03276.

The apparent motion of a fixated stimulus during head translation in the dark was found to depend on the magnitude of the vestibulo-ocular reflex (VOR). Absolute convergence level determines VOR magnitude and thereby influences apparent motion during head movement by determining the magnitude and direction of the pursuit effort required to maintain gaze stability. The results are discussed in terms of the biological utility of the coupling between convergence and the VOR in maintaining image stability, and the role of the pursuit eye movement system in illusory movement. **A82-30874** **Contrast sensitivity at high velocities.** D. C. Burr (CNR, Istituto di Neurofisiologia, Pisa, Italy) and J. Ross. *Vision Research,* vol. 22, no. 4, 1982, p. 479-484. 33 refs.

Measurements were made of the contrast required to see the direction of motion of drifting gratings and of moving bars. The spatial frequency at which least contrast is required to see sinusoidal gratings decreases as their velocity increases, but peak sensitivity is identical at all velocities up to 800 deg/sec. Similarly, the wider a single bar, the higher the velocity at which it is best visible. A bar 80 deg wide is best seen when moving at 300-600 deg/sec, and can be seen, and its direction of motion identified, even when moving at 10,000 deg/sec. These results show that motion does not diminish the visual passband, but instead slides the spatial frequency window along the spatial frequency scale, maintaining peak sensitivity at a temporal frequency of about 10 Hz (at photopic luminances). W. Hofmann (Forschungsgesellschaft für angewandte Naturwissenschaften, Forschungsinstitut für Hochfrequenzphysik, Wachtberg-Werthhoven, West Germany). *(International Union of Radio Science and Nachrichtentechnische Gesellschaft, Gemeinsame Tagung, Kleinheubach, West Germany, Oct. 5-9, 1981.) Kleinheubacher Berichte,* vol. 25, 1982, p. 3-17. 63 refs. In German.

The development of protection guidelines based on the biological effects of electromagnetic radiation in the radio frequency range is reviewed, and the concept of equating exposures in terms of a specific absorption rate (SAR) is presented. To define SAR in respect to orientation in the field over a relatively wide frequency range, models representing the absorbing body are used in addition to various techniques in theoretical dosimetry. The dosimetric results are presented in terms of the SAR to provide a basis for new developments in radio frequency radiation protection guidelines in the USA and the Federal Republic of Germany. **A82-31151** † **Circadian rhythm dynamics under conditions of an altered gaseous medium and hypokinesia (Dinamika tsirkadnykh ritmov v usloviiakh izmenennoi gazovoi sredy i gipokinezii).** N. A. Agadzhanian and V. N. Cherniakova. *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 179-191. 68 refs. In Russian.

Characteristics of the daily oscillations in human physiological functions during restricted motor activity are investigated along with the possibility of correcting circadian rhythm impairments by the use of hypoxic breathing gas compositions, graded exercise and combinations thereof. Measurements of heart rate, body temperature, saliva sodium content, diuresis and urinary sodium and potassium excretion were made in 20 healthy subjects during 49 days of antiorthostatic hypokinesia and 30 days of bed rest in a pressure chamber. Prolonged hypokinesia is found to provoke various types of disturbances in human circadian rhythms, most notably a desynchronization of the rhythms studied and decreases in their amplitude. Moderate hypoxia at daily intervals stabilizes cardiac activity and body temperature rhythms, however marked effects are found when hypoxia is combined with graded exercise. A.L.W.

**A82-31152** † **Effects of geomagnetic field disturbances on the diurnal rhythm of physiological functions (Vliianie vozmushchenii geomagnitnogo polia na sutochnuiu ritmiku fiziologicheskikh funktsii).** G. V. Ryzhikov, V. A. Kuz'menko, and A. B. Buluev (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 192-198. 20 refs. In Russian.

Differences in the diurnal physiological rhythms of healthy humans during times of weak and strong geomagnetic field disturbances are studied in light of observations of changes in physiological rhythms accompanying degradations in physiological condition and increased morbidity during geomagnetic disturbances. Body temperature, arterial pressure, heart rate and respiratory rate were measured six times daily in 30 healthy subjects at rest, and analyzed with respect to values of the mean K index for the corresponding days. Decreases in the range of diurnal adjustments of body temperature and heart rate and an advance of the transition from the positive to the negative phase of the diurnal rhythms are observed during periods of enhanced geomagnetic disturbances as indicated by K indexes between 3.7 and 5.3. Systolic pressures on the other hand exhibit the opposite tendencies on disturbed days. These unlike changes in the rhythms of different parameters thus lead to an increase in the mismatch of adaptive changes. A.L.W.

**A82-31153 †** **The relation between cardiac and respiratory rhythms as a function of the state of the geomagnetic field (Sootnoshenie mezhdu ritmami serdtsebieniia i dykhaniia v zavisimosti ot sostoianii geomagnitnogo poliia).** V. A. Kuz'menko, V. A. Gumeniuk, O. S. Raevskaia, and I. M. Syrkina (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 199-202. 11 refs. In Russian.

The characteristics of cardiac and respiratory rhythms and their interrelationship in the same individual are compared for periods of high and low geomagnetic disturbedness. EKGs and pneumograms were measured two to three times a day in four healthy subjects over the course of 20 to 26 days, and compared with the level of geomagnetic disturbances as indicated by the three-hour K index for the corresponding days. Functional reorganizations are observed during days of elevated geomagnetic disturbances, which are associated with increases in respiratory rate, a suppression of respiratory arrhythmias and, most often, a suppression of cardio-respiratory synchronism. Experiments were conducted to develop physiological criteria for human operator reliability as characterized by the probability of the correct processing of increasing amounts of visual information. Measurements of electroencephalographic beta, alpha, theta and delta waves, electromyograms of the left hand, heart rates and respiratory rates were obtained in subjects performing a trinary selection task when presented with visual signals at rates of from 30 to 100/min, and used to compute a degree of difficulty expressing the physiological cost of performing the task at various rates. The degree of difficulty computed according to the values of biological, emotional and purposeful activity indicators is found to exhibit a close linear relation with operator processing capacity at all information rates. Limiting value of the degree of difficulty for the efficient processing of quantities of visual information are obtained, and it is concluded that this factor may be used for the evaluation of operator reliability. A.L.W.

The hemodynamic and metabolic responses of the normal heart to physical exercise and the injection of the catecholamine novodrine are determined to serve as a standard for the evaluation of cardiac patients. Catheterization of the left ventricle and coronary sinus were performed in five healthy male volunteers to allow blood sampling. Ergometer exercise and the administration of novodrine are found to produce equal changes in heart rate, cardiac cycle phase duration and contractility, although novodrine reduced cardiac preload while leaving afterload unchanged and exercise had the opposite effect. The product of heart rate with arterial pressure, an indirect indicator of myocardial oxygen demand, increased significantly with novodrine and more markedly after exercise; these changes were reflected in direct indicators of coronary blood supply. Measurements of coronary blood composition indicate the absence of myocardial ischemia. Myocardial elasticity is also noted to increase during increases in coronary blood supply. A.L.W.

**A82-31158 †** **Relation of changes in autonomic reactions to the effectiveness of mental activity under conditions of emotional stress (Sviaz' izmenenii vegetativnykh reaktsii s effektivnost'iu umstvennoi deiatel'nosti v usloviiakh emotsional'nogo napriazheniia).** E. The effects of various periods of alimentary starvation on human tolerances to extreme levels of acute hypoxia are investigated. Subjects were exposed to stepwise increasing and continuously increasing simulated altitudes of up to 10,000 m in a pressure chamber or to nitrogen breathing until the onset of impairments in mental functioning following fasts of 4 and 14 days duration. Four-day fasting is found to increase human tolerance levels to both stepwise and rapidly increasing hypoxia, without influencing the maximum duration of nitrogen breathing. The 14-day fast, on the other hand, sharply increased human tolerance to rapidly increasing hypoxia, particularly at rest, and more than doubled tolerance times for nitrogen breathing. The fundamental source of the antihypoxic effect of 4-day starvation is thus identified with a state of metabolic acidosis, while the antihypoxic effect of the 14-day fast is attributed to a reduction in oxygen demand and a slowing of deoxygenation as a result of a reduced ventilatory response to hypoxemia. **A82-31160 †** **Cardiac rhythm regulation at rest and during orthostasis (O reguliatsii serdechnogo ritma v pokoe i pri ortostaze).** V. R. Veber and Iu. G. Gaevskii (Semipalatinskii Meditsinskii Institut, Semipalatinsk, Kazakh SSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 258-261. 10 refs. In Russian.

A differential study is presented of the mechanisms of autonomic regulation providing for the stability of the cardiac rhythm at rest, the transition to orthostasis, and the secondary stabilization of the rhythm in orthostasis. Orthostatic intervalograms were derived from electrocardiographic R-R intervals measured in normal subjects including those who had received the autonomic nervous system blockers obzidane or atropine. The blockade of sympathetic inputs by obzidane is found to induce a shift in the resting pulse curve to the right on the pulsogram and an increase in pulse variability. An increase in sympathetic inputs provided by atropine shifts the curve to the left and decreases variability, as does the orthostatic test. The autonomic system blockers are also found to produce opposite effects on the pattern of heart rhythm variations during the transition from rest to orthostatic stability. Results demonstrate the roles of the sympathetic and parasympathetic nervous systems in the control of heart rhythms, and indicate the presence of different mechanisms controlling heart rate and its stability. A.L.W.

**A82-31161 †** **The voluntary regulation of heart rate (K voprosu o proizvol'noi reguliatsii chastoty serdechnykh sokrashchenii).** N. K. Stepanov, A. M. Zingerman, D. N. Menitskii, and K. F. Peskovskii (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 262-269. 35 refs. In Russian.

The possibility of and probable mechanisms for the voluntary control of heart rate are investigated. Subjects seated in a semi-darkened room were asked to control the position of a beam on an oscillograph screen representing the cardiointervalogram of the subject recorded by an electrocardiograph. Results demonstrate the possibility of the voluntary stabilization, reduction and increase of heart rate, with increases more successfully produced than reductions. Analysis of pneumogram, electromyogram, and EEG data and blood pressure measurements indicates the reduction in heart rate to be accomplished by a general systemic weakening, and it is proposed that giving instructions as to this effect will lead to a more marked heart rate reduction. The voluntary quickening of heart rate appears to be a component of the nonspecific activation mechanism, which is evidently a part of the respiratory-cardiac reflex. It is also noted that functional destabilization of regulatory systems is a necessary condition for the directed self-regulation of heart rate. A.L.W.

**A82-31162 †** **An approach to the determination of the reflex reactions of cardiac rhythm (Ob odnom podkhode k opredeleniiu reflektornykh reaktsii serdechnogo ritma).** E. I. Shul'man, M. Iu. Gel'tsel', and M. B. Shtark (Akademiia Meditsinskikh Nauk SSSR; Akademiia Nauk SSSR, Institut Avtomatiki i Elektrometrii, Novosibirsk, USSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 270-274. 8 refs. In Russian.

A methodological approach is proposed for the determination of the reflex reaction of the cardiac rhythm to short-duration stimuli. The approach is based on the fact that changes in the R-R interval are synchronous with respiratory phases, so that at rest the difference between two adjacent R-R intervals in a given respiratory phase is relatively stable in a given individual and condition. This proposal has been verified by a study of the distribution characteristics of differences in adjacent R-R intervals during inspiration, pause and expiration over the course of 20-40 min, in which the histograms of the distribution were found to show little scatter or displacement from zero. A.L.W.

**A82-31163 †** **Evaluation of object size upon viewing through an aperture (Otsenka razmera ob'ekta pri rassmatrivanii cherez aperturu).** V. D. Glezer, N. B. Kostelianets, and Iu. I. Levkovich (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 309-314. 11 refs. In Russian.

Factors influencing the illusory diminution of object size when the object is viewed with a limited portion of the retina or through a slit are investigated. Experiments involved the sequential presentation of portions of an equilateral triangle through moving circular apertures of various sizes to a group of 10 observers, who were asked to judge the size of the triangle based only on their views of portions through the aperture. Object size is found to be consistently underestimated when the object was viewed through the moving aperture. Comparison of data obtained in the presence and absence of the aperture indicates that the image size underestimation was due to two factors: the short viewing time for each image segment and the size of the aperture. Data thus support the existence of two mechanisms of size estimation, localized in the exterior geniculate body and the visual cortex. A.L.W.

**A82-31164 †** **Color fusion under conditions of equal brightness (Sliianie tsvetov v usloviiakh ravenstva po iarkosti).** A. V. Bertulis, Ia. M. Bertulene, and R. I. Tsitvaras (Kaunasskii Meditsinskii Institut, Kaunas, Lithuanian SSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 315-319. 7 refs. In Russian.

The resolving power of the human eye under conditions where the color regions to be distinguished are of equal brightness is studied. Experiments involved color fields and rectangular grids consisting of bands of various monochromatic colors, with subjects asked to observe the sharpness of color boundaries as the colors change in relative brightness in the first case, and to compare the brightnesses of different colors in overlapping grids in the second. The boundary between different colors is observed to be less well perceived when the colors are of equal subjective brightness than in the case of a color gradient. Color bands of a spatial frequency greater than 10-13/deg are not distinguished if they are of equal subjective brightness. A decrease in the wavelength difference of the two colors decreases the critical frequency for color fusion, at which the two original colors are blended and a new color is perceived. The fusion effect may be used to measure spectral sensitivity. A.L.W.

**A82-31165 †** **Characteristics of iron and copper metabolism during athletic training (Osobennosti obmena zheleza i medi pri sportivnoi trenirovke).** V. Ia. Rusin, V. V. Nasolodin, and V. A. Vorob'ev (Iaroslavskii Gosudarstvennyi Universitet, Yaroslavl, USSR). *Fiziologiia Cheloveka,* vol. 8, Mar.-Apr. 1982, p. 326-332. 18 refs. In Russian.

The effects of athletic training on iron and copper metabolism in men and women are investigated. Determinations of blood iron and copper levels and iron and copper balances were made at various times of the year in untrained controls and in highly trained male and female skiers. Iron content in the formed elements of the blood is observed to vary with time of year in male athletes, being greatest in the fall-winter period, and in female athletes and untrained women, where it is greatest in the summer and fall. Changes in copper levels are less marked. The concentrations of iron and copper in the blood cells of all men were higher than in women, with the greatest difference between trained groups occurring during the period of intensive training. Shifts in blood trace element levels after competition are also observed to be greater in women than in men, while women absorbed more nutritive iron following competition. Results justify the use of dietary trace element supplements in athletes, particularly females, during all phases of training. A.L.W.

**A82-31388** **A selective attention test as a predictor of success in flight training.** D. Gopher (Technion - Israel Institute of Technology, Haifa, Israel). *Human Factors,* vol. 24, Apr. 1982, p. 173-183. 9 refs.

in the pilot selection test battery of the Israeli Air Force was studied using a group of 2000 flight cadets. In this test, subjects are presented with 48 auditory messages. Each message is composed of strings of words and digit names. Different strings are simultaneously presented to the two ears. Subjects are required to detect digit names in the relevant channel and to reconsider channel relevance upon indication. Three types of selective listening errors are recorded: omissions, intrusions, and switching errors. Flight cadets who had completed a two-year training program had significantly lower error scores on all attention measures. In addition, these measures had low correlations with all other tests of the pilot selection battery. Thus, attention capabilities appear to be an independent dimension that enhances the predictive validity of the present test battery. (Author)

**A82-31389** **Performance effects of noise intensity, psychological set, and task type and complexity.** V. J. Gawron (Calspan Advanced Technology Center, Buffalo, NY). *Human Factors,* vol. 24, Apr. 1982, p. 225-243. 70 refs. NSF Grant No. DAR-78-12722.

Knowledge of the effect of noise on performance is limited and is generally inconclusive. Examination of previous research indicated the need for a systematic and concurrent investigation of the effects of psychological set, type of task, task complexity (single or dual task), and noise intensity. Three states of psychological set were established by telling groups of eight subjects each that noise degrades, facilitates, or has no effect on performance. A control group was told nothing about noise effects. Three intensities of broad-band white noise (55, 70, 85 dBA) were presented over loudspeakers to each subject during the completion of a four-task, adaptive-criterion battery. The only significant main effect of noise was a facilitation of tracking performance. There were several significant interactions of noise with the other independent variables. (Author)

**A82-31412** **Adaptation in motion perception - Alteration of motion evoked by ocular pursuit.** J. Bacon (Tufts University, Medford, MA) and H. Wallach (Swarthmore College, Swarthmore, PA). *Perception and Psychophysics,* vol. 31, no. 3, Mar. 1982, p. 251-255. NSF Grant No. BNS-79-24462.

A new perceptual adaptation, an alteration in the perceived direction of motion given by ocular pursuit, is reported. When an object starts to move on a straight path, its displacement is initially given by a shift of its image on the retinas of the stationary eyes; then, after about 200 msec, the eyes start to track the moving object. The perception of motion that results from ocular pursuit was altered by causing ocular pursuit of a moving object to be preceded regularly by a displacement of the object's image whose direction differed from the direction of the pursuit movement. This was arranged by changing the direction of the given motion at approximately the moment when image displacement changed into tracking. Prolonged exposure to such conditions resulted in a change of the tracked motion's apparent direction, which became somewhat more like the direction of the preceding motion phase that was given by image displacement. (Author)

**A82-31447** **Visual depth sensitivities of various cues for depth perception.** S. Nagata (Japan Broadcasting Corp., Broadcasting Science Research Laboratories, Tokyo, Japan). *NHK Laboratories Note,* Oct. 1981. 10 p. 13 refs.

A common scale for evaluating the availability of the depth cue in visual perception is proposed. The depth sensitivity (DS) is a ratio scale expressed as the viewing distance/the detection threshold of depth distance. The DS is intended as an empirical grounds for comparing the relative effectiveness of cues, e.g., motion parallax, retinal image size, accommodation, and brightness, for discerning relative depth. It is assumed that valid changes in depth perception retain visual characterization of the object and that the just-noticeable difference corresponds to the depth sensation on each cue for the visual distance. Two subjects were engaged in trials of depth perception of projected objects viewed through a slit or artificial pupil, covering all known depth cues in individual tests. Binocular parallax was most sensitive up to 10 m, while motion parallax was best at 8 deg/sec, with a sensitivity exceeding binocular parallax at 10 m. M.S.K.

**A82-31486** † **Reflection of individual characteristics of human and animal higher nervous activity in the nature of heart rate changes (Otrazhenie individual'nykh osobennostei vysshei nervnoi deiatel'nosti cheloveka i zhivotnykh v kharaktere izmenenii chastoty serdechnykh sokrashchenii).** N. V. Makarenko (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Mar.-Apr. 1982, p. 176-182. 14 refs. In Russian.

The relation between individual patterns of higher nervous activity and the characteristics of autonomic responses are studied by the measurement of heart rate in humans processing various amounts of visual information and in dogs during the establishment of conditioned reflexes. In dogs, changes in R-R interval duration and heart rate during the development and reinforcement of positively conditioned reflexes are found to be directly dependent on the intensity of the stimulation process in the individual animal. Humans with a high level of nervous system mobility exhibit a significantly greater pulse reactivity upon the solution of problems with a time limit than those who exhibit low mobility. Results may be used in the development of a method for the evaluation of the psychophysiological stress of a human operator in a man-machine system and in operator selection and training. A.L.W.

**A82-31487** † **Age characteristics of fatigue during local muscular work in humans (Vozrastnye osobennosti utomleniia pri lokal'noi rabote myshts u cheloveka).** T. V. Alferova (Cheliabinskii Institut Fizicheskoi Kul'tury, Chelyabinsk, USSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 28, Mar.-Apr. 1982, p. 230-236. 14 refs. In Russian.

Functional changes in the cardiovascular and respiratory systems and the motor apparatus during local muscular work in persons of different ages are investigated. Electrocardiography, arterial pressure measurements, oxyhemography during a breath-holding test and electromyography were used to assess work capacity in persons of nine age groups from 4 to 95 years performing static and dynamic work on a digital ergograph to exhaustion, and in children doing school work. Variations with age in muscle power, mean load, work performed, fatigue and endurance indicate that work capacity in persons of different ages is determined by the unequal development of different motor capacities as well as differences in the regulation of fatigue processes. Blood supply to working muscles is maintained in young children by an increase in heart rate, in juveniles and adults by increases in blood pressure, while in the elderly circulation remains practically unchanged. Changes in fatigue patterns are observed in school children following lessons, which correspond to increased fatigueability, decreased endurance and a high volume of ergographic work performed. A.L.W.

**A82-31494** † **Changes in psychophysiological functions of flight personnel under various regimes of active rest (Izmenenie psikhofiziologicheskikh funktsii u lits letnogo sostava pri razlichnykh rezhimakh aktivnogo otdykha).** N. I. Frolov, A. N. Kol'tsov, and S. V. Babenin. *Voenno-Meditsinskii Zhurnal,* Mar. 1982, p. 42-44. In Russian.

The effects of various intensities and regimes of exercise during rest at a sanitorium on the psychophysiological condition of flight personnel are investigated. Programs consisting of morning drills, training on special apparatus, rowing, swimming, tourism and sports were assigned to subjects grouped on the basis of initial physical condition and age, and performed at various intensities. The active rest regimes are found to be more beneficial than passive rest, leading to more rapid reductions in complaints of fatigue, irritability and exercise fatigue, improvements in subjective well-being, reductions in heart rate and arterial pressure, increases in stroke and minute blood volumes and breath holding time, improvements in cardiovascular adaptation to exercise, increases in visual discrimination, and static muscular endurance and reductions in reaction time and tremors. The degree of improvement is observed to depend on exercise intensity within each group, and to be greatest in overweight persons. A.L.W.

**A82-31501** **Discrete models of a human operator /Survey of foreign research/.** I. E. Tsibulevskii. *(Avtomatika i Telemekhanika,* Sept. 1981, p. 111-132.) *Automation and Remote Control,* vol. 42, no. 9, Feb. 20, 1982, pt. 2, p. 1226-1241. 16 refs. Translation.

Discrete models of the human operator which include both a perception of the input signal and discrete control signals at the output are reviewed. The model of Bekey (1962) is shown to encompass a transfer function with a clamping element of zero order converted into an element of the first order, while the neuromuscular element is represented by an inertial unit with a gain and time constant. Wilde and Wescott (1963) developed a predicting model based on the assumptions that visual information is separated by discrete time intervals, impulses for movement from the brain are dispatched in equal periods of time, and the programs of motion are configured to have the motion begin at a particular time in the future. Further attention is given to the details of pursuit tracking model, for tracking with a preview, a model with finite states, and a model in which pulse corrections are introduced for the velocity value at the output. **A82-31502** † **Nutrition and athletics (Pitanie i sport).** K. A. Korovnikov, K. A. Laricheva, and N. I. Ialovaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Mar. 1982, p. 18-20. 24 refs. In Russian.

The nutrients ingested by athletes not only must compensate for the energy expended, they must also regulate the body's metabolism so that the various functional systems operate as economically as possible. Recent dietary theories advocating fasting are discussed. Fasting is decried because it interrupts precisely coordinated metabolic processes, in particular, the metabolism of proteins, and leads to an accumulation of the toxic products of intermediate metabolic steps. It also disturbs the electrolytic balance and interferes with the enzyme system, cell membranes, and the metabolism of vitamins. Diets calling for only certain classes of foods at a given time are deprecated, and their adverse physiological effects are listed. The experimentally verified principles underlying the type of diet that an athlete should have are expounded. A brief physiological description of the way in which carbohydrates, proteins, fats, and certain branched-chain amino acids provide energy to the muscles is included. C.R.

**A82-31503** † **A comparative characterization of hemodynamics and respiration under static and dynamic loads (Sravnitel'naia kharakteristika gemodinamiki i dykhaniia pri staticheskikh i dinamicheskikh fizicheskikh nagruzkakh).** A. B. Gandel'sman, T. A. Evdokimova, N. Kh. Sidorova, and A. P. Karpov (Gosudarstvennyi Institut Fizicheskoi Kul'tury; I Leningradskii Meditsinskii Institut, Leningrad, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury,* Mar.

1982, p. 24-28. 22 refs. In Russian.

It is pointed out that a combination of static and dynamic loads is at work when the muscles are used in motor activity. The individual contributions of these loads to the changes that occur in respiration and hemodynamics are investigated. A bicycle ergometer provides the dynamic load; the static load comes from pressing the handle of an electrodynamometer for 1 min. The average arterial pressure is found to increase more for static loads than for dynamic loads. The consumption of O2, here used to assess respiration, is greater with dynamic loads. It is concluded that, with static loads, vascular-reflector reactions predominate; with dynamic loads, the main reactions are respirative-energetic. C.R.

**A82-31504** † **The functional reserves of athletes (Problema funktsional'nykh rezervov sportsmenov).** A. S. Mozzhukhin (Gosudarstvennyi Institut Fizicheskoi Kul'tury, Leningrad, USSR). *Teoriia i Praktika Fizicheskoi Kul'tury*, Mar. 1982, p. 49-51. In Russian.

The abilities that manifest themselves under extremely unusual or threatening circumstances are discussed. These reserves are classified here according to origin (biological and social) and type (functional and structural). It is pointed out that this first distinction is somewhat arbitrary since social reserves have a biological basis. Social reserves are in turn subdivided into psychic reserves, which are related to motivation, and reserves that depend upon a person's professional ability. In discussing functional reserves, a distinction is made between those that are biochemical and those that are physiological. In the case of athletes, it is pointed out that all the factors making up the reserves can be altered through training. A fuller knowledge of the way in which these reserves come into play could therefore be used to improve training programs. C.R.

Krylov (Tsentral'nyi Nauchno-Issledovatel'skii Institut Kurortologii i Fizioterapii, Moscow, USSR). *Voprosy Kurortologii Fizioterapii i Lechebnoi Fizicheskoi Kul'tury*, Mar.-Apr. 1982, p. 1-6. In Russian.

The deep penetration of microwaves is regarded as a distinctive feature. But since the depth depends on a large number of factors, studies carried out on animals can not readily be used in assessing the effect on man. In medical experiments, the temperature change in the tissue or organ subjected to radiation is considered the most reliable indicator of intensity. Tissues that are unable to release heat are usually the ones damaged by microwaves. Microwaves also have the effect of lowering arterial pressure. Experiments on rats showing that microwaves inhibit myocardial infarction are described. Reference is also made to studies showing that microwaves counteract certain physiological irregularities associated with hypertension. C.R.

Gorban' (Tsentral'nyi Nauchno-Issledovatel'skii Institut Kurortologii i Fizioterapii, Moscow, USSR). *Voprosy Kurortologii Fizioterapii i Lechebnoi Fizicheskoi Kul'tury*, Mar.-Apr. 1982, p. 18-22. In Russian.

Temperature changes in the brain and adjoining tissues of animals and phantoms exposed to decimetric radiation are determined as a measure of energy absorption. Experiments were performed on wood shavings moistened by a physiological solution, anesthetized rabbits and dogs and animal corpses exposed to 400, 1200 or 2000 mW/sq cm decimetric radiation localized on the temporo-parietal region for up to 30 min. Comparison of the spatial and temporal patterns of temperature increase in the phantoms and corpses on the one hand with those in live animals on the other reveals the effects of decimetric waves to depend not only on the intensity and duration of the irradiation, but on the nature and condition of the cerebral blood cooling system. A.L.W.

Kozlova (Tsentral'nyi Nauchno-Issledovatel'skii Institut Kurortologii i Fizioterapii; Moskovskii Nauchno-Issledovatel'skii Institut Vaktsin i Syvorotok, Moscow, USSR). *Voprosy Kurortologii Fizioterapii i Lechebnoi Fizicheskoi Kul'tury*, Mar.-Apr. 1982, p. 13-17. 10 refs. In Russian.

The effects of irradiation by decimetric waves at various localizations on processes of immunogenesis in the primary immunological response are investigated. Experiments involved rabbits exposed to 120 mW/sq cm of 460 MHz radiation for 6 min daily, then injected with thymus-dependent sheep erythrocyte antigen. The effects of decimetric wave irradiation on the immune response are found to depend not only on the site of irradiation, but on the stage of the process at which the radiation is received. Irradiation of the projection zone of the thyroid gland during the production and induction phases of immunogenesis induces an immunodepression, while during the period preceding immunization it stimulates the immune response. In contrast, radiation of the projection zone of the adrenals at any period before or after antigen injection leads to the development of an immunodepressive effect by the stimulation of glucocorticoid functions. **orthostasis (Izmeneniia serdechnoi deiatel'nosti i regionarnogo krovoobrashcheniia golovy pri gravitatsionnykh vozdeistviiakh, modeliruemykh).** B. M. Fedorov and T. B. Sebekina. *Patologicheskaia Fiziologiia i Eksperimental'naia Terapiia,* Mar.-Apr. 1982, p. 3-10. 49 refs. In Russian.

The use of antiorthostasis as a model of gravitational effects is considered. The positioning of the trunks of anesthetized dogs in an antiorthostatic posture at angles of -45 and -90 deg to the horizontal plane causes a sharp increase of pressure in the fourth ventricle of the brain, a decelerated rhythm of cardiac contraction, increased peripheral resistance of branches of the carotid artery, and a sharp increase of the pressure in the jugular veins. Under antiorthostasis conditions, the increased resistance in the branches of the carotid artery and deceleration of the volumetric rate of circulation in them may be considered an emergency compensatory reaction preventing the overfilling of the cerebral vessels with blood. Seasonal variations in blood corticosteroid levels and pentose phosphate pathway enzyme activities are studied in rats kept at a constant temperature of 20 C and 12-hr light cycle throughout the year. The activities of glucose-6-phosphate dehydrogenase and 6-phosphoxgluconate dehydrogenase in the liver, kidneys, brain and spleen are observed to peak in the summer and autumn and reach a minimum in the winter and spring months. Corticosterone production is found to rise from April to October, although peripheral dehydrogenase activation takes place from June-July through December-January. Results are explained by the dependence of enzyme activities on hormone levels and their relation to patterns of pancreatic insulin secretion, which is in turn closely related to the seasonal rhythmicity of the hypothalamic-adrenal system. It is further concluded that the temporal matching of the yearly cycle of hypothalamic-adrenal activity with the yearly environmental cycle takes place according to a stress mechanism. A.L.W.

The paper examines individual variants of the growth rate of the constantly shifted auditory threshold (CSAT) and of the regress of the provisionally shifted auditory threshold (PSAT) in factory workers (weavers) exposed to noise at 101 dB. Irrespective of individual sensitivity to noise, saturation of the acoustic analyzer and stabilization of hypoacousis were revealed in weavers after 10-12 years of work in the 4000 Hz band. An algorithm is derived which makes it possible to predict values of hypoacousis after any length of work under conditions of industrial noise on the basis of the initial PSAT values and corresponding values of CSAT growth. V. Serova. *Zhurnal Vysshei Nervnoi Deiatel'nosti,* vol. 32, Mar.-Apr. 1982, p. 263-268. 12 refs. In Russian.

The state of conditioned reflex activity in rats during exposure to space flight conditions is investigated. Albino rats who had been conditioned to sounds and light flashes signalling the appearance of food were flown on board the Cosmos 1129 biosatellite for a period of 18.5 days, and the state of the reflex was evaluated according to the latency and intensity of the response to different signal levels. During the flight, a reduction in the level of conditioned reflex activity was observed: the number of omissions increased while the magnitude of the response decreased and the latency increased. By the 7th-12th day of flight, the normal intensity relations had been impaired by phase equalization, and a tendency towards the disinhibition of differentiation was noted. The changes may be explained by a weakening of both nervous processes fundamental to the reflex, with the more sensitive inhibitory process more affected than the excitatory process. A.L.W.

Fluctuations in the duration of the cell cycle are examined in terms of a dynamic model of the membrane regulation of cell division. The model is based on the oxidation of membrane lipids as the principal self-oscillation process determining the rate of cell division according to changes in lipid mobility. The presence of white noise in the parameters determining the influxes of lipids and antioxidants in the membrane is simulated by methods of Markov processes and probability modeling. An equation for the distribution of cell generation times is obtained and the increase in dispersion and mean cycle time upon variations in system parameters related to the density of cell cultures is calculated. Results are in qualitative agreement with experimental data. A.L.W.

**A82-31530 † Calculation of the isochromatics and isoclinics of the cornea (Raschet izokhrom i izoklin rogovoi obolochki glaza).** M. A. Pen'kov, G. M. Altukher, and M. L. **A82-31533 † Dynamics of changes in animal body mass and skeletal musculature under conditions of hypokinesia (Dinamika izmenenii massy tela zhivotnykh i ikh skeletnoi muskulatury v usloviiakh gipokinezii).** E. V. Kocherezhkina (Akademiia Nauk SSSR, Institut Evoliutsionnoi Morfologii i Ekologii Zhivotnykh, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Mar. 1982, p. 118, 119. 14 refs. In Russian.

The responses of body mass and the skeletal musculature of young animals growing under conditions of limited motor activity are traced in rats kept in restrictive cages for a period of 2 months. Animals maintained in cages preventing them from turning around exhibited signs of a high stress reaction and lost a significant amount of weight after three weeks, after which the experiment was terminated. Those given slightly more room showed signs of adaptation after several days and a weight gain from 125 to 180 g after 2 months, whereas control animals showed a weight gain to 330 g in the same time period. Muscular indexes and gastrocnemius muscle masses are also observed to be greater in the controls. Results demonstrate the influence of hypokinesia on muscle growth, and are supported by the discovery of smaller muscle fiber diameters in the constrained rats. A.L.W.

**A82-31534 † Experimental model with a supplementary source of endogenous serotonin (Eksperimental'naia model' s dopolnitel'nym istochnikom endogennogo serotonina).** N. K. Popova, N. N. Kudriavtseva, T. V. Guvakova, and N. M. Enishevskaia (Akademiia Nauk SSSR, Institut Tsitologii i Genetiki; Novosibirskii Gosudarstvennyi Universitet, Novosibirsk, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Mar. 1982, p. 99-101. 11 refs. In Russian.

An experimental model providing a long-term source of supplementary endogenous serotonin is presented. The model makes use of gastrointestinal tract sections from embryo mice transplanted under the skin of adult mice of the same strain as sources of additional serotonin. Morphological studies of transplants after 30-40 days have shown them to be similar in cell composition to the corresponding sections of intact embryos, particularly as regards the serotonin-containing enterochromaffin and mast cells. Biochemical studies have shown the presence of serotonin in the transplants, and elevated serotonin levels in the blood, although not the brain, of the recipients. The model is thus suitable for studies of the role of serotonin in the peripheral regulation of physiological systems. A.L.W.

**A82-31535 † The role of lymphocytes in the regeneration of hematopoiesis under condition of local irradiation (Ob uchastii limfotsitov v regeneratsii krovetvoreniia v usloviiakh lokal'nogo obluchenii organizma).** E. D. Gol'dberg and A. M. Dygai (Tomskii Meditsinskii Institut, Tomsk, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Mar. 1982, p. 97-99. 13 refs. In Russian.

The role of lymphocytes in the regulation of the proliferation, differentiation and migration of hematopoietic stem cells following the local irradiation of the bone marrow is investigated. Experiments involved the evaluation of the numbers of nucleated cells in the thymus, spleen and bone marrow of mice exposed to a dose of 7.0 gram-roentgens of X radiation. An accumulation of lymphocytes is observed in the bone marrow of both irradiated and shielded limbs one day after irradiation, although by the fifth day lymphocyte numbers in the shielded limb were normal but rose sharply in the irradiated limb. Lymphocytosis in both irradiated and shielded hematopoietic tissues was less marked in thymectomized animals and in animals treated with antithymocytic heterologous serum, however was restored by the injection of viable thymocytes. The lymphocytosis observed after the first day had no effect on the colony forming activity of the hematopoietic tissues, while that developing on the fifth day stimulated colony-forming activity, apparently related to lymphocyte function in stimulating the regeneration of hematopoiesis. A.L.W.

**A82-31536 † Destructive and reparative processes in the hippocampus upon prolonged exposure to nonionizing microwave radiation (Destruktivnye i reparativnye protsessy v gippokampe pri dlitel'nom vozdeistvii neioniziruiushchikh mikrovolnovykh izluchenii).** V. S. Belokrinitskii (Ministerstvo Zdravookhraneniia Ukrainskoi SSR, Kievskii Nauchno-Issledovatel'skii Institut Obshchei i Kommunal'noi Gigieny, Kiev, Ukrainian SSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Mar. 1982, p. 89-92. 7 refs. In Russian.

Ultrastructural changes in the brain upon long-term exposure to low doses of nonionizing microwave radiation are investigated. Electron microscopic examinations were conducted of the hippocampi of rats exposed to various intensities of 12.6-cm radiation for 40 min three times daily for a period of 2 months. Ultrastructural changes including vacuolization, regressive myelin transformation, nonequilibrium neurofibrillar stretching and fragmentation, mitochondrial swelling and darkening (densification) were observed in the alveus, polymorphic cell and pyramidal cell layers of the hippocampi of rats irradiated at 1000 microwatt/sq cm, and to lesser extents in animals irradiated at levels down to 10 microwatt/sq cm. The pattern of the changes demonstrates the presence of both destructive and reparative processes occurring simultaneously in the same cell, which may represent a mechanism of pathogenesis in humans exposed to environmental microwaves. A.L.W.

**A82-31537 † Electrophysiological studies of the auditory-receptor function in the case of the combined injection of kanamycin and lasix (Elektrofiziologicheskie issledovaniia funktsii slukhovogo retseptora pri sochetannom vvedenii kanamitsina i laziksa).** R. M. Khanamirian, B. I. Dunaivitser, and T. G. Tatevosian (Ministerstvo Zdravookhraneniia SSSR, Erevanskii Institut Usovershenstvovaniia Vrachei, Yerevan, Armenian SSR). *Vestnik Otorinolaringologii*, Mar.-Apr. 1982, p. 10-14. 13 refs. In Russian.

The effect of the combined intravenous injection of therapeutic doses of kanamycin and lasix on the cochlear bioelectric response was investigated in acute experiments on 30 cats. It is shown that the amplitude of microphone potentials responding to tonal stimulations of 250, 1000, and 5000 Hz and axonal potentials responding to short sound snaps decreases beginning with the 15th minute. A maximum decrease of the bioelectric amplitude is observed two to three hours after injection. Gradual, almost complete recovery of the amplitude in five hours was recorded. The results indicate that the ototoxic effect produced by the combined injection of therapeutic doses of kanamycin and lasix is reversible. B.J.

**A82-31538 † Electrometric studies of the human gustatory analyzer in healthy persons and in the simulation of weightlessness (Elektrometricheskoe issledovanie vkusovogo analizatora cheloveka v norme i pri modelirovanii nevesomosti).** I. Ia. Iakovleva (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Vestnik Otorinolaringologii*, Mar.-Apr. 1982, p. 15-17. 9 refs. In Russian.

An electrogustometer was used to study the threshold sensitivity of taste receptors to electrical stimulation as well as gastrolingual reflex parameters for 62 healthy men aged 25 to 45. Fifty-three men were used as controls, while nine men were examined under conditions of strict bed rest during five days, with a bed head slope of 8 deg. This brought about a statistically significant increase in gustatory thresholds, and a change in the direction of the gastrolingual reflex (seven men) and its inhibition (two men). B.J.

Zubkov (I Moskovskii Meditsinskii Institut, Moscow, USSR). *Vestnik Otorinolaringologii*, Mar.-Apr. 1982, p. 41-44. 19 refs. In Russian.

**A82-31541 † Investigation of the sensitivity of the vestibular apparatus to galvanic-current stimulation (Issledovanie chuvstvitel'nosti vestibuliarnogo apparata k razdrazheniiu gal'vanicheskim tokom).** Iu. P. Syromiatnikov and V. G. Ovakimov (Ministerstvo Zdravookhraneniia RSFSR, Moskovskii Nauchno-Issledovatel'skii Institut Gigieny, Moscow, USSR). *Vestnik Otorinolaringologii*, Mar.-Apr. 1982, p. 33-37. 16 refs. In Russian.

The use of vestibular galvanometry to examine a control group of practically healthy subjects has made it possible to determine vestibular thresholds of sensitivity to galvanic-current stimulation in women. Vestibular sensitization in response to the current was noted in subjects of the same occupation (weavers working for about 20 years), showing vegetovascular dysfunction after long-term exposure to low-frequency production-related vibration and noise. The use of the vestibular galvanometric method for the purpose of occupational screening is considered. B.J.

**A82-31542 † Eight-hour rhythm of autonomic regulation (Vos'michasovoi ritm vegetativnoi reguliatsii).** A. I. Bogatyr' (Kievskii Nauchno-Issledovatel'skii Institut Neirokhirurgii, Kiev, Ukrainian SSR). *Vrachebnoe Delo*, Mar. 1982, p. 79-81. In Russian.

Twenty-one examinations of the dynamics of the rate of heart contractions in the course of 24 hours have been performed. An intradiurnal (ultradianic) rhythm with a period of about eight hours has been disclosed. Extremal values of the rhythm with an average probability of 0.83 were found at 1, 9, and 17 hours (sympathetic peaks) and at 5, 13, and 21 hours (parasympathetic peaks). B.J.

**A82-31545 † Functional-morphological characteristics of microvessels of the rat liver under hypokinesia (Funktsional'no-morfologicheskie osobennosti mikrososudov pecheni krys v usloviiakh gipokinezii).** G. M. Knipshe (I Leningradskii Meditsinskii Institut, Leningrad, USSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, Mar. 1982, p. 50-56. 23 refs. In Russian.

Hypokinesia was produced in 66 non-inbred white rats by putting the animals in pencil boxes for 1, 2, and 4 weeks. Changes in specific volumes of various hepatic microvessels under hypokinesia and under hypokinesia combined with metaperon administration were investigated steriologically. The hypokinesia produced certain changes in the specific volume of all the hepatic microvessels studied, but the degree and character of the volumetric relations between the microvessels were different. Under metaperon administration, volumetric changes in the microvessels occurred with greater regularity. B.J.

**A82-31546 † Effects of high-frequency ultrasound on adaptive changes in cell resistance (Vliianie vysokochastotnogo ul'trazvuka na adaptivnye izmeneniia ustoichivosti kletok).** V. P. Plavinskis (Odesskii Nauchno-Issledovatel'skii Institut Glaznykh Boleznei i Tkanevoi Terapii, Odessa, Ukrainian SSR). *Arkhiv Anatomii, Gistologii i Embriologii*, vol. 82, Mar. 1982, p. 56-59. 8 refs. In Russian.

The reparative and protective effects of ultrasound on retinal cells are investigated in the light of the use of ultrasound in the treatment of several ocular conditions. Actinomycin D was used to induce metabolic disturbances in the retinas of rabbits which had either undergone multiple ocular exposures to ultrasound at a frequency of 880 kHz and intensity 0.4-0.6 W/sq cm, or subsequently underwent ultrasonic irradiation. Evaluations of RNA and total protein contents in the cytoplasm of ganglionic cells and photoreceptor cell nuclei indicate subsequent ultrasonic treatment to suppress or reduce the inhibitory effects of actinomycin given in small doses, although not the effects of large doses of the antibiotic. Preliminary ultrasound treatments, on the other hand, increase the metabolic resistivity of retinal cells to the damaging effects of actinomycin D, so that minimal cytochemical disorders are present following its administration. A.L.W.

**A82-31547 † The use of a phytochrome-dependent reaction to assess the influence of space flight factors on a plant organism (Ispol'zovanie fitokhromzavisimoi reaktsii pri otsenke vliianiia fakto-**

rov kosmicheskogo poleta na rastitel'nyi organizm). B. A. Shtsine, L. V. Nevzgodina, and A. T. Miller (Akademiia Nauk Latviiskoi SSR, Institut Biologii, Riga, Latvian SSR). *Akademiia Nauk Latviiskoi SSR, Izvestiia,* no. 11, 1981, p. 94-99. 16 refs. In Russian.

Experimental results are presented concerning the effect of space flight factors on lettuce seeds, tested on the Cosmos-936 and Cosmos-1129 satellites in the course of 20 days. The phytochrome-dependent reaction (PDR) of photosensitive seeds was used as the criterion to assess the biological effect of space flight factors. It is found that the PDR of dry seeds was inhibited after space flight, particularly if they were exposed to open space during flight. After flight, both the Phi-660 and Phi-730 dependent reactions were found to be inhibited. B.J.

A. Ratiner (Moskovskii Nauchno-Issledovatel'skii Institut Vaktsin i Syvorotok, Moscow, USSR). *Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii,* Jan. 1982, p. 22-26. 5 refs. In Russian.

With advances in microbiology, the number of microorganisms known to cause infectious diseases is increasing. This has led to an increase in the number of serums for diagnostic use. Diagnostic practice today uses polyvalent serums to determine the class of microorganisms and monovalent serums to make the final identification. With the rapid system, antibodies are distributed among polyvalent serums in such a way that monovalent serums become unnecessary. C.R.

Experimental results are presented which indicate the existence of a mesophase state of DNA molecules in aqueous salt solutions of polyethylene glycol. The observed optical properties of this mesophase state can be interpreted in the light of two models of polymeric liquid crystals. According to one model, phase separation produces layers of parallelly arranged DNA molecules, each successive layer being turned at a certain angle with respect to the preceding layer; in this case, twisting occurs in the direction perpendicular to the long axes of the DNA molecules. According to the other model, the DNA molecules form columnar structures, and twisting occurs along the long axes of the DNA molecules. B.J.

The efficiency of an isolated heart did not change after prolonged physical training of rats for an extreme load. The increase in oxygen consumption by the entire organism in 'uphill' running as compared to the resting level in the trained rats was 14% lower than in the control animals. Prolonged hypokinesia of the rats did not elicit a change in the efficiency of the isolated heart. S.L.

The FSH secretion-inhibiting action of inhibin in vitro under basal conditions and also in the presence of LH-RH is suppressed by the addition of MIX, a phosphodiesterase inhibitor. In the presence of LH-RH, inhibin reduces significantly the intracellular level of cAMP in isolated pituitary cells. In contrast, the simultaneous addition of MIX and inhibin raises the cAMP level, and this stimulation is comparable to the increase observed when MIX is added alone. These observations suggest that one mode of action of inhibin could be mediated by a reduction in cAMP within the pituitary gonadotropic cell. Author

Male mice are enclosed in cages of different dimensions (cage A - 23x8x8 cm., cage B - 38x27x17 cm.), in an alternating light/dark regimen, at an ambient temperature of 22 to 23 C. The successions of the behavioral sequences of ultradian activity periods are noticed by direct observation during 11 consecutive hours in light. The experimental situation modifies the mean duration time and the behavioral organization of each activity period. However, the comparison of the overall activity time lengths and the comparison of the overall behavioral frequencies suggest that the energy spent per mouse is constant. J.M.S.

**PRELIMINARY STUDY OF THE EFFECTS OF PROLONGED ACCELERATION ON SPINAL DYNAMICS OF BABOONS. 1: ACCELERATION. 2: BIOMECHANICAL ANALYSIS**
Arnold R. Slonim, Marvin E. Souder, James H. Vechte, John W. Frazier, Arnold R. Slonim, and Leon E. Kazarian Jun. 1981 60 p refs
(AD-A101768; AFAMRL-TR-80-40) Avail: NTIS HC A03/MF A01 CSCL 06C

Repetitive exposures to acceleration are studied to determine if they have an effect on spinal dynamics: if they cause bone strength variations of predisposition to spinal injuries. Two baboons were exposed simultaneously to 10 plateaus of +4 Gz/30 seconds each separated by intervals of +1.5 Gz/45 seconds at the rate of two times per week for 26 weeks. The results are to control noncentrifuged baboons. Subsequently, the spinal columns of these baboons were subjected to extensive mechanical strength testing. Each vertebra of the two baboons exposed to +Gz acceleration twice a week for 26 weeks was subjected to axial compressive loading at the rate of 88 sq to the minus third power meter/sec (21 in./min) on a material testing machine. The data, analyzed by PDP 11/34 computer, were compared with data obtained previously from four noncentrifuged baboons of the same age, weight and sex. S.L.

**CHANGE IN BLOOD GLUCOSE LEVEL IN RATS AFTER IMMOBILIZATION**
R. D. Platonov, G. M. Baskakova, and S. A. Chepurnov Dec. 1981 9 p refs Transl. into ENGLISH from Biol. Nauka (USSR), no. 9, 1975 p 37-40 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75997; NAS 1.15:75997) Avail: NTIS HC A02/MF A01 CSCL 06C

Experiments were carried out on male white rats divided into four groups. In group one the blood glucose level was determined immediately after immobilization. In the other three groups, two hours following immobilization, the blood glucose level was determined every 20 minutes for 3 hours 40 minutes by the glucose oxidase method. Preliminary immobilization for 2 hours removed the increase in the blood glucose caused by the stress reaction. By the 2nd hour of immobilization in the presence of continuing stress, the blood glucose level stabilized and varied within 42 + or - 5.5 and 47 + or - 8.1 mg %. Within 2 hours after the immobilization, the differences in the blood glucose level of the rats from the control groups were statistically insignificant. Author

**THE EFFECT OF PULSED MICROWAVES ON THE BREATHING OF MICE [INVERKAN AV PULSADE MIKROVAAGOR PAA ANDNING OCH KROPPSVIKT HOSS MOESS]**
C.-O. Cribom, C. I. Henriksson, and C.-J. Clemedson Apr. 1981 20 p refs In SWEDISH
(FOA-C-54032-H2, H3) Avail: NTIS HC A02/MF A01

With the use of a specially constructed microwave generator, mice were exposed to microwaves synchronized to the different stages of respiration. Frequencies other than the respiratory rate effect the volume and rate of respiration in shorter intervals of exposure. Even though the animals were not heated at the low average effect, approx. 1mW/sq cm during exposure, a change in body weight was measurable. These results indicate that the thermal energy balance in mice is somehow affected. J.M.S.

US-Patent-Class-33-143C) Avail: US Patent and Trademark Office CSCL 06B

A cervix-to-rectum measuring device to be used in the treatment of cervical cancer is described. It includes a handle and a probe pivotably connected to the handle for insertion in the rectum. The measuring device further includes means for coupling the handle to an intrauterine radiation applicator when the latter is positioned in the uterine cervix and the probe is inserted in the rectum to pivot the handle about the probe. A gear is provided which is adapted to pivot with the probe. A pinion pivotably connected to the handle meshes with the gear. A pointer fixed to the pinion is displaced in response to the pivoting of the handle about the probe, and this displacement can be read from a scale on the handle, providing an indication of the cervix-to-rectum distance.

**HEAT-ACTIVATED SWEAT GLAND DENSITIES DETECTED THROUGH MACROPHOTOGRAPHY IN LEAN AND OBESE MEN EXPOSED TO A WARM, HUMID ENVIRONMENT** Ph.D. Thesis

James Alexander Bell 1981 172 p
Avail: Univ. Microfilms Order No. 8129140

Heat-activated sweat gland (HASG.cm-2) densities were quantified in lean and obese men to determine whether a significant inverse correlation between HASG and body surface area could be demonstrated. Heat exchange rates were also examined to determine if the heat exchange capacity of the obese is compromised due to fewer HASG. Twelve inactive men were divided into three equal groups. HASG were measured using a macrophotographic technique at four skin sites: forearm, chest, back, and thigh. Methacholine, a synthetic choline derivative biochemically similar to acetylcholine and synergistic to its action, was injected intradermally to ascertain maximal sweat gland activation. Other variables measured included skin and subcutaneous temperatures, rectal and esophageal core temperatures, heart rate, blood pressure, local and total body sweat rates, metabolic rate, and evaporation rate using an evaporimeter. HASG densities were not significantly different among the three groups. Dissert. Abstr.

**ANALYSIS OF VERTEBRAL STRESS DISTRIBUTIONS AND EJECTION-RELATED INJURY MECHANISMS** Final Technical Report, 1 Jul. 1977 - Jan. 1980

M. Plesha and T. Belytschko Wright-Patterson AFB, Ohio AFAMRL Feb. 1981 51 p refs
(Contract F33615-77-C-0526)
(AD-A098639; AFAMRL-TR-80-67) Avail: NTIS HC A04/MF A01

Stress analyses of lumbar vertebrae were performed by a three dimensional finite element method for the purposes of evaluating simplified models of the vertebrae which are suitable as injury postprocessors, and gaining a better understanding of injury mechanisms. The finite element analyses were linear and elastic. Axial and moment loads were applied over the end plates to simulate G(Z) impact and on the facets to simulate load transmission between the articular facets and the vertebral bodies. The finite element model predicts that the maximum stresses under axial load are perpendicular to the axis of the vertebral body, which are called axial stresses; this is consistent with the predominance of compressive and wedge fractures. However, the maximum stresses predicted by the finite element model are only about a third of those predicted by the simplified injury model. This discrepancy is due to the fact that a substantial portion of the total load is transmitted through the vertebral centrum which is neglected in the simplified model. S.L.

**EFFECTS OF WHOLE AND PARTIAL BODY EXPOSURE TO DRY HEAT ON CERTAIN PERFORMANCE MEASURES**

John F. Courtright May 1981 63 p refs
(AD-A100306; AFAMRL-TR-80-43) Avail: NTIS HC A04/MF A01

The effects on four performance measures of air of 65.6 C when the head was cooled with air of 15.6 C and without head cooling, were evaluated. Six subjects were exposed for 66 minutes to these environmental stressors and to two benign control tests. Humidity for all tests was maintained at 10 mm Hg partial water vapor pressure. The performance measures were mental arithmetic accuracy, choice reaction time, position compensation tracking, and rate compensation tracking. The tasks were presented in a repeating sequence throughout preexposure and exposure tests. Performance on all tasks showed the effects of the passage of time related to the gradual onset of fatigue. Preexposure reaction time performance and rate compensation tracking were better in the afternoon than in the morning. Performance on all tasks except position compensation tracking was influenced by differences in subject arousal level as indicated by body temperature measurements. The relationship between arousal level and reaction time stimulus information level was particularly pronounced. S.L.

**DEVELOPMENT OF THE CARBON FIBRE POLYSULPHONE TOGGLE FOR LIGAMENT REPAIR OPERATIONS**

M. S. Hunt May 1981 14 p ref
(CSIR-ME-1709; ISBN-0-7988-14784) Avail: NTIS HC A02/MF A01

The selection of a simple linked bar design, the toggle, for ligament repair operations was examined. The ligament repair operations are often carried out by using carbon fiber. The carbon fiber tows pass through a hole drilled in the bone so that they can be attached to the bone on its outer surface. The attachment can be done with a bollard and a number of successful operations have used this technique. A second hole is drilled adjacent to the hole through the bone but just deep enough for the insertion of the bollard and allows one or more tows to be attached in this way. In practice the carbon fiber tow used for the ligament is doubled over on itself once or twice to give increased strength. This creates a loop at one end of the ligament and allows a much simpler method of attachment based on the use of the one hole only. Possibilities are studied which explore the possibilities of retaining both simplicity and security. E.A.K.

Dieter Schittek 1981 23 p refs Transl. into ENGLISH from Fortschrittliche Betriebsfuhrung u. Ind. Eng. (West Germany), v. 29, no. 5, 1980 p 247-252 In ENGLISH and GERMAN
(PNR-90097; Trans-15573/TLT-00819) HC A02/MF A01

The unexpectedly high absenteeism in West Germany during an economic recession is discussed. The literature indicates Work content, worker expectations, management methods, performance assessment techniques, and degree of personal responsibility affect psychosomatic illness rates. Psychological factors are suggested as the cause of increases in somatic illness, since physiological stresses show a downward trend. Sociological influences are also important; lower tolerance of frustration and growing sensitivity to working conditions increase the probability that illness will occur as an abreaction of the unconscious arousal complexes to which dissatisfaction can give rise. Managers who place the responsibility for industrial relations on medical and social welfare experts are criticized. Managers should ensure that tasks challenge individuals' knowledge, skill, and experience, and that workers are divided into groups whose members work well together. Author (ESA)

Micro-g cardiovascular and pulmonary studies are summarized. A plan for coordinating European ground based micro-g simulation studies is presented. A multiuser facility for ground use which can be transformed into a space qualified facility is described. Difficulties in micro-g simulation include: the impossibility of equalizing hydrostatic pressure in the circulatory system; equalizing lung perfusion; recreating the subjective feeling of weightlessness; skin maceration in water; increased diuresis; and negative pressure breathing. Standardization of experiments is hindered by the interlaboratory variety of: measuring methods; simultaneous countermeasures; subjects; positioning, support, diet, and hydration of subjects; and temperature influences. A ground based model of Anthrorack, supplemented with a microcomputer and bus system interfaced with standard testing and measuring equipment, is suggested as a means of overcoming these problems. **PERSONALISED TASK REPRESENTATION: DEVELOPMENTS**
R. Gregory Oct. 1981 21 p refs
(AMTE(E)-TM-81104; BR81584) Copyright. Avail: Issuing Activity

The logic underlying personalised task representation (PTR) and with the hermeneutical roots from which it grew are described. A central action node is encircled by when, why, how, and what next nodes. The what next node leads to the next action node. It is used for knowledge representation and the design of intelligent support systems. The logical relations of PTR are expressed in terms of a frame methodology as a step towards implementation of a PTR based system for the elicitation and representation of task knowledge. By anchoring subsequently elicited representations in task dependent primitives, the system potential for machine execution of the representations can be realized. Author (ESA)

**STUDY OF PROTECTIVE MASK TYPE 33 [OEVERSYN AV SKYDDSMASK TYP 33]**
Roger Sundqvist Apr. 1981 25 p In SWEDISH
(FOA-C-40134-C2) Avail: NTIS HC A02/MF A01

A functional evaluation of protective mask type 33 was made. The mask did not comply with civilian standards because the measured CO2 concentration was too high and the exhalation resistance needed to be lowered. Both factors are considered important for user's comfort and could easily be improved. The facial rim was not flexible enough to conform to different facial shapes, wrinkles or beards. The mask design could be significantly improved by changing its shape; this would necessitate retooling the mold. Some simple modifications of the present tools which could improve the mask's performance are discussed. M.D.K.

**RECOGNITION OF VEHICLE TARGETS FROM THE AIR: A FIELD TEST [IDENTIFIERING AV FORDONSMAAL FRAAN LUFTEN ETT FAELTFOERSOEK]**
Bjoern Nordin Nov. 1981 25 p refs In SWEDISH
(FOA-C-56027-H2) Avail: NTIS HC A02/MF A01

The distances at which a previously detected vehicle target can be identified was determined. The flight height was 100 m and the speed of the aircraft 190 Km/hr. Six persons without any experience in reconaissance identified five vehicles with a virtually constant accuracy of 70% regardless of the distance. The length of the checked interval was 1 to 4.5 Km, but most of the answers were given at 2.5 Km from the target. Other factors than distance influence on identification performance, indicating that the test persons used other decision making criteria. Author (ESA)

**CARDIOVASCULAR ADAPTATIONS IN WEIGHTLESSNESS: THE INFLUENCE OF IN-FLIGHT EXERCISE PROGRAMS ON THE CARDIOVASCULAR ADJUSTMENTS DURING WEIGHTLESSNESS AND UPON RETURNING TO EARTH**

Charles H. Bennett *In* Houston Univ. The 1981 NASA ASEE Summer Fac. Fellowship Program, Vol. 1 20 Aug. 1981 37 p refs

Avail: NTIS HC A14/MF A01 CSCL 06S

The effect of in-flight exercise programs on astronauts' cardiovascular adjustments during spaceflight weightlessness and upon return to Earth was studied. Physiological changes in muscle strength and volume, cardiovascular responses during the application of lower body negative pressure, and metabolic activities during pre-flight and flight tests were made on Skylab crewmembers. The successful completion of the Skylab missions showed that man can perform submaximal and maximal aerobic exercise in the weightless enviroment without detrimental trends in any of the physiologic data. Exercise tolerance during flight was unaffected. It was only after return to Earth that a tolerance decrement was noted. The rapid postflight recovery of orthostatic and exercise tolerance following two of the three Skylab missions appeared to be directly related to total in-flight exercise as well as to the graded, regular program of exercise performed during the postflight debriefing period. M.D.K.

**ANTHROPOMETRIC DATA ERROR DETECTING AND CORRECTION WITH A COMPUTER**

David D. Chesak (St. Joseph's College) *In its* The 1981 NASA ASEE Summer Fac. Fellowship Program, Vol. 1 20 Aug. 1981 12 p refs

Avail: NTIS HC A14/MF A01 CSCL 05H

Data obtained with automated anthropometric data equisition equipment was examined for short term errors. The least squares curve fitting technique was used to ascertain which data values were erroneous and to replace them, if possible, with corrected values. Errors were due to random reflections of light, masking of the light rays, and other types of optical and electrical interference. It was found that the signals were impossible to eliminate from the initial data produced by the television cameras, and that this was primarily a software problem requiring a digital computer to refine the data off line. The specific data of interest was related to the arm reach envelope of a human being. M.D.K.

**ANTHROPOMETRIC PROGRAM ANALYSIS OF REACH AND BODY MOVEMENT Final Report**

Charles J. McKinley *In its* The 1981 NASA ASEE Summer Fac. Fellowship Program, Vol. 2 20 Aug. 1981 18 p refs

Avail: NTIS HC A17/MF A01 CSCL 05H

A multifaceted project involving tasks related to anthropometric data collection and comparison is discussed. Activities relating to human force and motion capabilities and information on astronaut candidates doing certain force and motion activites were studied. The subjects were suited, both in one-G and in neutral buoyancy of a water facility, and also unsuited, in a one-G environment. Pieces of hardware used in quantification of the data collection were reviewed. The hardware included a CYBEX 2 force and torque machine, and a three dimension camera system (AMS) for measuring range of motion envelopes. Collecting techniques are compared and standardization of data collection is suggested. E.A.K.

**OPTIMAL USE OF ELECTROPHYSIOLOGICAL INDICATORS OF MUSCULAR EFFORT AND FATIGUE Final Report**

Otis L. Updike *In* Houston Univ. The 1981 NASA ASEE Summer Fac. Fellowship Program, Vol. 2 20 Aug. 1981 15 p refs

Avail: NTIS HC A17/MF A01 CSCL 06S

Electromyograms (EMG) from working muscles convey information on effort and fatigue. Their application, e.g., to assess the demands of vehicle control tasks, is complicated by the cooperative action of sets of muscles, by both intrinsic and imposed filtering, and by numerous other sources of variation. Fourier analyses of these noise like signals offer one approach to interpretation; downward spectral shifts accompany fatigue. Techniques are being sought (in both time and frequency domains) for further condensing the wideband EMG signals, while retaining essential information, into a concise 'state vector' usable in comparing control system designs. For discrete characters whose ancestral states are known, the prescriptions of Hennig are well-defined, but their applicability only when there is no incompatibility between different characters has led to the elaboration of a number of methods for dealing with incompatibilities. One category is the parsimony methods, which choose that phylogeny on which the fewest changes of character state need be assumed. Another is the compatibility methods, which choose that phylogeny which is perfectly compatible with the largest number of characters, irrespective of how many changes need be assumed in other characters. Other approaches include the use of phenetic clustering algorithms and methods fitting trees to similarity or distance matrices. Each method has different implicit assumptions concerning the biology of the characters and the information available in the data. The biological assumptions and statistical behavior of each method are discussed. T.M.

**A STATISTICAL MODEL OF THE CONTROLLER FUNCTIONS OF THE HUMAN TEMPERATURE REGULATING SYSTEM Ph.D. Thesis**

Jeffrey Leo Ringuest 1981 128 p

Avail: Univ. Microfilms Order No. 8126923

A model of the controller mechanisms of the human temperature regulating system was developed. In this context, three different controller responses were examined including: increases in metabolic heat production, increases in evaporative heat loss and modifications in surface blood flow. Additionally, upper and lower limits for each of these controller functions were researched. The relationship between the environmental temperature and the controller model form and parameters was investigated. Finally, it was necessary to statistically test the validity of the controller model that was developed. Data was analyzed using a least squares approach. This procedure involved fitting an equation to a controller response for a limited temperature range. A model of human responses to temperature stress in an air environment and in a water environment was developed which proved to be valid for a wide range of experimental conditions. Dissert. Abstr.

**THE EFFECTS OF VARYING EXERCISE INTENSITIES AND DURATIONS ON PLASMA HIGH DENSITY LIPOPROTEIN-CHOLESTEROL, BODY COMPOSITION AND MAXIMUM OXYGEN CONSUMPTION Ph.D. Thesis**

Thomas John Birk 1981 169 p

Avail: Univ. Microfilms Order No. 8128089

Forty-three sedentary men twenty-three to thirty-eight years of age after being randomly assigned to either one of four experimental treatment groups or an inactive control group completed a fifteen week, three day per week experimental exercise training period. Results indicated that high density lipoprotein-cholesterol was increased during a seven and one-half to fifteen weeks, three days per week, exercise program of moderate intensity and lower to moderate duration. Percent body fat was decreased most effectively by a higher intensity of workload. A higher intensity and longer duration (80 percent of the difference for thirty minutes) was more effective than other exercise intensities and durations for significantly increasing maximum oxygen consumption. There was also a significant inverse relationship between maximum oxygen consumption and percent body fat at seven and one-half and fifteen weeks of three days per week jogging exercise. Dissert. Abstr.

**DISTURBANCES IN THE CARBOHYDRATE METABOLISM IN SHOCK. 3: EXPERIMENTAL HEMORRHAGIC SHOCK AND SOME SHOCK MODELS. REVIEW OF THE LITERATURE**

C. vanderMeer Jun. 1980 81 p In DUTCH; ENGLISH summary
(MBL-1980-10; TDCK-71318) Avail: NTIS HC A05/MF A01

Literature concerning disturbances in the carbohydrate metabolism in experimental hemorrhagic shock, traumatic shock, burns and cardiac shock is reviewed. General observations are a hyperglycemia especially in the early stages of shock (presumably caused by an increased release of catecholamines), sometimes followed in later stages by glycogen depletion in the liver and hypoglycemia. In addition an increased level of plasma lactate and pyruvate, acidosis and a decrease in energy rich phosphates in a number of organs are found. Except for the assumption that these changes may be caused by hypoxia in the liver and other organs, as yet nothing is known with certainty about the origin and nature of the disturbances in the carbohydrate metabolism. Therapeutic effects a.o glucose, glucose-insulin-KC1, glucocorticoids, ATP-MgCl2, naloxone, neuroleptics and neuroleptanalgesia and the adrenergic blocking agents WR-149, 024 and WR-2823 are described. S.L.

**EVALUATION OF LEFT VENTRICULAR ASSIST DEVICE PUMP BLADDERS CAST FROM ION-SPUTTERED POLYTETRAFLUORETHYLENE MANDRELS**

Mar. 1982 103 p refs
(Contract NAS3-22476)
(NASA-CR-167904; NAS 1.26:167904; TE200-230-82) Avail: NTIS HC A06/MF A01 CSCL 06B

A highly thromboresistant blood contacting interface for use in implanatable blood pump is investigated. Biomaterials mechanics, dynamics, durability, surface morphology, and chemistry are among the critical consideration pertinent to the choice of an appropriate blood pump bladder material. The use of transfer cast biopolymers from ion beam textured surfaces is investigated to detect subtle variations in blood pump surface morphology using Biomer as the biomaterial of choice. The efficacy of ion beam sputtering as an acceptable method of fabricating textured blood interfaces is evaluated. Aortic grafts and left ventricular assist devices were implanted in claves; the blood interfaces were fabricated by transfer casting methods from ion beam textured polytetrafluorethylene mandrels. The mandrels were textured by superimposing a 15 micron screen mesh; ion sputtering conditions were 300 volts beam energy, 40 to 50 mA beam, and a mandrel to source distance of 25 microns. S.L.

**[MEDICAL RESEARCH OF NAVAL PERSONNEL] Progress Report, Jan. 1979 - Jul. 1981**

Jul. 1981 15 p refs
(RNP-3/81; BR82205) Copyright. HC A02/MF A01

Research into biological, medical, physiological and psychological problems affecting the health and fighting efficiency of naval personnel is summarized. No safe and simple test of the physical fitness of an individual on a single occasion was found. The cognitive efficiency of divers is impaired during prolonged dives at depths > 300 m. No long-term adverse effects result from breathing air with C02 level = 0.5%. For C0, 15 ppm in air is safe. Afterdrop in deep body temperature, following cold water immersion can be accounted for by a physical mechanism; postimmersion death is attributed to vasomotor collapse. Maximum noise exposure levels recommended for divers working near sonar sources are 175 db for nonhooded and 185 db for hooded divers. Motion sickness affects 75% of sailors during their service life. When a 25 man liferaft is closed down, toxic levels of C02 are reached within 25 min. Author (ESA)

The research effort of the past year was divided into three phases, each of which adds to our systematic investigation of the frequency response characteristics of cardiovascular regulation. The frequency response characteristics are obtained from the analysis of pressure, flow and heart volume responses to low frequency, sinusoidal acceleration (0.001 to 0.25 Hz + or - 2gz). The 3 phases are: (1) Heart volume measurements in unblocked and autonomically blocked, normal and cardiac denervated dogs undergoing low frequency +2g sinusoidal acceleration; (2) Comparison of autonomic effector blockade with ganglionic blockade; and (3) The effect of cardiac denervation on cardiovascular function before and after autonomic effecter blockade. **HEALTH HAZARDS OF VISUAL DISPLAY UNITS WITH PARTICULAR REFERENCE TO OFFICE ENVIRONMENTS**

Rachel Birnbaum 1981 13 p refs
(PB82-120627) Avail: NTIS HC A02/MF A01 CSCL 06J

The interaction of man and the visual display unit (VDU) takes place during major tasks, which may make up the greater part of the job of the worker. The occupational health effects of VDUs derive primarily from the effects of long exposure of the worker to the light, reflection, glare and flickering of the CRT screen. The majority of problems therefore tend to be perceptual and the precipitating causes tend to be multiple and interactive. These and other ergonomic problems of the VDU operator are summarized. T.M.

**CONDUCTING STUDIES OF TRANSFER OF LEARNING: A PRACTICAL GUIDE Final Report**

Thomas A. Payne Brooks AFB, Tex. AFHRL Jan. 1982 32 p refs
(Contract F33615-77-C-0054; AF Proj. 1123)
(AD-A110569; AFHRL-TR-81-25) Avail: NTIS HC A03/MF A01 CSCL 05/9

This is a guide for use by the practical researcher concerned with conducting studies of transfer from pretraining of pilots in ground-based environments to performance in aircraft. While the material addresses principally transfer of learning of pilots, many of the issues should be applicable to other contexts, to include training of other aircrew members or even individuals who have quite different tasks to perform. The paper does not deal with theory but, rather, is concerned entirely with method of the transfer study. Method issues, to include the planning, tasks students, performance measurement, instructors, and analyses, are central to arriving at precise estimates of transfer effects--approaching as closely as possible the maximum that might have been demonstrated, providing a goal for the operational instructor pilot. Study models discussed include those for percent transfer of learning and the for transfer effectiveness ratio. Use of the latter should be essential in providing answers to contemporary questions concerning how much simulator pretraining can be used to replace aircraft training time--without reducing the goodness of the end product, the combat effective pilot. Some type of difference or change score is frequently used to quantify the effects of experimental treatments and educational programs on individuals and on groups of individuals. Whether the change measurement involves the use of simple difference scores, their derivatives, or some more complex methodological design, the measurement process itself assumes that the treatment or instruction results in higher levels of the originally measured variable and that the only change that occurs is a quantitative one. If this assumption is not met, then the computation of any type of difference score is inappropriate and the scores themselves are useless for measuring growth or change. Two studies investigated the tenability of the assumption that classroom instruction results in increases in students' achievement levels while the qualitative nature of that achievement remains constant across time. The data utilized were the item responses to tests in basic mathematics and in general biology administered as pretests and after instruction to students enrolled in those courses. Results included that this assumption was not tenable in the biology data set, where increases in mean achievement level were accompanied by corresponding changes in the factor structure underlying the item responses. For the mathematics data, however, there was no such violation of the assumption: As student achievement levels increased the underlying factor structure remained unchanged. The implications of these results for psychology, education, and program evaluation are noted. Author (GRA)

Effects of reduced motor activity and water regimen on the growth of animals and their skeletal musculature A82-29440

**ACTIVITY CYCLES (BIOLOGY)**
Behavioral study of ultradian activity periods of mice enclosed in experimental cages of different dimensions
[NASA-TM-76848] N82-22870

**ADAPTATION**
Adaptation in motion perception - Alteration of motion evoked by ocular pursuit A82-31412
Adaptation of skeletal and cardiac muscle to elevated motor activity in hypo- and athyreotic rats A82-31527

**ADENOSINE TRIPHOSPHATE**
Orientation of Ca/2+/-dependent ATPases in sarcoplasmic reticulum membranes and reconstructed proteoliposomes A82-29443

**ADRENAL GLAND**
Preventing disturbances to the structure of DNA in the cardiac muscle from emotional-nociceptive stress by blocking beta-adrenoreceptors and the peroxidation of lipids A82-31528

**AERONAUTICS**
A contribution to the history of Russian and Soviet aviation psychology: Documents and materials --- Russian book A82-30875

**AEROSPACE ENVIRONMENTS**
CELSS scenario analysis: Breakeven calculations
[NASA-CR-166319] N82-23982

**AEROSPACE MEDICINE**
The medical and public health challenge of space A82-29266
Effects of ascorbic acid on the elevation of human cold tolerance A82-30027
Use of an active orthostatic test in aeromedical examinations A82-30028
A contribution to the history of Russian and Soviet aviation psychology: Documents and materials --- Russian book A82-30875
Effects of starvation on human tolerance to acute hypoxia A82-31159
The state of hearing in pilots in civil aviation A82-31520
Dynamics of changes in animal body mass and skeletal musculature under conditions of hypokinesia A82-31533
Change in blood glucose level in rats after immobilization
[NASA-TM-75997] N82-22872
Cardiovascular adaptations in weightlessness: The influence of in-flight exercise programs on the cardiovascular adjustments during weightlessness and upon returning to Earth N82-23110

**AGE FACTOR**
Age characteristics of fatigue during local muscular work in humans A82-31487

**AIR COOLING**
Effects of whole and partial body exposure to dry heat on certain performance measures
[AD-A100305] N82-22880

**AIR LAND INTERACTIONS**
Mass mortality and its environmental and evolutionary consequences --- at end of Cretaceous period A82-28596

**AIRCRAFT LIGHTS**
Fuselage lights as a cause factor of vertigo in night formation flight - Perceiving pattern of fuselage light A82-28925

**AIRCRAFT NOISE**
A comparison of models to predict annoyance reactions to noise from mixed sources A82-29168
The state of hearing in pilots in civil aviation A82-31520

**ALGAE**

Competition between algae in a flow system A82-31517

**ALGORITHMS**

Protein folding, protein structure and the origin of life: Theoretical methods and solutions of dynamical problems [NASA-CR-166318] N82-22867

**ALKALOSIS**

Effect of acid-base status on the kinetics of the ventilatory response to moderate exercise A82-29564

**ALTITUDE ACCLIMATIZATION**

Sparing effect of chronic high-altitude exposure on muscle glycogen utilization A82-29556

Effects of starvation on human tolerance to acute hypoxia A82-31159

**ALVEOLI**

The ventilation-perfusion relation in residents of the Arctic coast of the north-east USSR A82-31154

**AMBIENT TEMPERATURE**

Regional redistribution of blood flow in the cat under conditions of high ambient temperature A82-29697

**AMIDES**

Principles of enzyme stabilization - Polyacrylamide-gel-immobilized trypsin and chymotrypsin with high catalytic activity at elevated temperatures A82-29446

**AMINO ACIDS**

Protein folding, protein structure and the origin of life: Theoretical methods and solutions of dynamical problems [NASA-CR-166318] N82-22867

**ANEMIAS**

Sickle cell anemia and aviation A82-29996

**ANIMALS**

Effects of reduced motor activity and water regimen on the growth of animals and their skeletal musculature A82-29440

**ANNUAL VARIATIONS**

Characteristics of iron and copper metabolism during athletic training A82-31165

Hormonal mechanisms of seasonal rhythms in rats A82-31518

**ANTHROPOMETRY**

The inverse dynamics of three-dimensional hominoid motion [CSIR-SWISK-28] N82-22887

Anthropometric data error detecting and correction with a computer N82-23115

Anthropometric program analysis of reach and body movement N82-23124

**ANTIBIOTICS**

Electrophysiological studies of the auditory-receptor function in the case of the combined injection of kanamycin and lasix A82-31537

**ANTIRADIATION DRUGS**

Study of the simultaneous effects of hormones and radioprotectors in the exposure of animals to ionizing radiation A82-30032

The survival of dogs irradiated with lethal doses of gamma radiation under conditions of chemical radioprotection and subsequent therapy A82-30033

**ANTISUBMARINE WARFARE**

An evaluation of the Nimrod Maritime Crew Trainer - A case study A82-29255

**AORTA**

Evaluation of left ventricular assist device pump bladders cast from ion-sputtered polytetrafluoroethylene mandrels [NASA-CR-167904] N82-23976

**APERTURES**

Evaluation of object size upon viewing through an aperture A82-31163

**ARCHITECTURE (COMPUTERS)**

Project OASIS: The design of a signal detector for the search for extraterrestrial intelligence [NASA-TM-84738] N82-23987

**ARCTIC REGIONS**

The ventilation-perfusion relation in residents of the Arctic coast of the north-east USSR A82-31154

**ARMED FORCES**

Spontaneous pneumothorax in a military environment A82-29994

**ARMED FORCES (FOREIGN)**

In the struggle for the health of sailors A82-30026

Perforated gastric and duodenal ulcers in servicemen A82-30031

**ASCORBIC ACID**

Effects of ascorbic acid on the elevation of human cold tolerance A82-30027

**ASYMPTOTIC METHODS**

A mathematical model of the dynamics of the inner ear A82-29153

**ATHLETES**

Characteristics of iron and copper metabolism during athletic training A82-31165

Nutrition and athletics A82-31502

The functional reserves of athletes A82-31504

Specialized acidophilic products for the nourishment of athletes A82-31514

**ATOMIC ENERGY LEVELS**

The mechanism of the interaction of the triplet state of porphyrins and phthalocyanines with electron acceptors A82-29432

**ATTENTION**

A selective attention test as a predictor of success in flight training A82-31388

**AUDITORY FATIGUE**

The state of hearing in pilots in civil aviation A82-31520

**AUDITORY PERCEPTION**

Structural features of the receptor cells of the saccular macula of the common frog A82-29433

A selective attention test as a predictor of success in flight training A82-31388

Individual sensitivity to noise A82-31521

Electrophysiological studies of the auditory-receptor function in the case of the combined injection of kanamycin and lasix A82-31537

**AUDITORY TASKS**

The formation in human ontogeny of the ability to repr[illegible]ce a given rhythm A82-31523

**AUTONOMIC NERVOUS SYSTEM**

Relation of changes in autonomic reactions to the effectiveness of mental activity under conditions of emotional stress A82-31158

Cardiac rhythm regulation at rest and during orthostasis A82-31160

Eight-hour rhythm of autonomic regulation A82-31542

Response of the cardiovascular system to vibration and combined stresses [AD-A110494] N82-23978

**AXIAL LOADS**

Preliminary study of the effects of prolonged acceleration on spinal dynamics of baboons. 1: Acceleration. 2: Biomechanical analysis [AD-A101766] N82-22871

Analysis of vertebral stress distributions and ejection-related injury mechanisms [AD-A098639] N82-22879

## B

BACK INJURIES
Sequelae of spinal column traumas in aeronautical medicine A82-29997

BACTERIA
Sensing of the proton potential /Delta mu H/ in Halobacterium halobium A82-29441
Disclosure of the complex structure of the absorption spectrum of bacteriorhodopsin A82-29806
The role of methylation and Ca/2+/ in the photoaxis of Halobacterium halobium A82-31598

BAILOUT
Aerodynamic forces experienced during ejection [AFAMRL-TR-80-16] N82-22078

BIOASTRONAUTICS
An approach to the mathematical modelling of a controlled ecological life support system [NASA-CR-166331] N82-23984

BIOCHEMISTRY
The interaction of tubulin with G-actin A82-29444
Theoretical conformational analysis of the neuropeptide inducing delta sleep A82-31531
The role of methylation and Ca/2+/ in the photoaxis of Halobacterium halobium A82-31598
The Na/+/-induced release of Ca/2+/ from the sarcoplasmic reticulum during the excitation of phasic muscle fibers A82-31599

BIOCLIMATOLOGY
Thermal shock and gene operation A82-30302

BIOCONTROL SYSTEMS
Chemoreceptor involvement in cortisol responses to hypoxia in ventilated dogs A82-29572
The voluntary regulation of heart rate A82-31161

BIODYNAMICS
A mathematical model of the dynamics of the inner ear A82-29153
Preliminary study of the effects of prolonged acceleration on spinal dynamics of baboons. 1: Acceleration. 2: Biomechanical analysis [AD-A101766] N82-22071

BIOELECTRICITY
Electrophysiological studies of the auditory-receptor function in the case of the combined injection of kanamycin and lasix A82-31537

BIOLOGICAL EFFECTS
Evidence for a biological clock A82-30301
Biological effects of high-frequency radiation - The concept of the specific absorption rate /SAR/ and its effect on safety regulations A82-30952
The biological and therapeutic effect of microwaves A82-31506

BIOLOGICAL EVOLUTION
Mass mortality and its environmental and evolutionary consequences --- at end of Cretaceous period A82-28596
Numerical methods for inferring evolutionary trees [DE82-002295] N82-23971

BIOLOGICAL MODELS (MATHEMATICS)
A mathematical model of the dynamics of the inner ear A82-29153
A stochastic model of a human operator in the manual control of a dynamic system A82-29469
Competition between algae in a flow system A82-31517
Mechanism for fluctuations in cell cycle duration A82-31529
Experimental model with a supplementary source of endogenous serotonin A82-31534

BIOMAGNETISM
NMR imaging in medicine A82-29574

BIOMASS
Competition between algae in a flow system A82-31517

BIOMEDICAL DATA
Aerodynamic forces experienced during ejection [AFAMRL-TR-80-16] N82-22078

BIOTECHNOLOGY
The role of biotechnology in the development of technical systems: A reference background [FOA-C-56026-H2] N82-22076
Evaluation of left ventricular assist device pump bladders cast from ion-sputtered polytetrafluorethylene mandrels [NASA-CR-167904] N82-23976

BLOOD
The organization of blood transfusions and blood substitutes on board ships at sea A82-30029
Change in blood glucose level in rats after immobilization [NASA-TM-75997] N82-22872

BLOOD CIRCULATION
Comparative characteristics of respiratory and circulatory changes upon acute hyperthermia in cats A82-29699

BLOOD FLOW
Regional redistribution of blood flow in the cat under conditions of high ambient temperature A82-29697
Effects of novodrine and physical exercise on hemodynamics and coronary blood supply in the healthy human --- catecholamine effects A82-31157

BLOOD PLASMA
Change in protein-lipid interactions upon the peroxide oxidation of blood serum lipoproteins A82-29447

BLOOD PRESSURE
Functional diagrams of flow and volume for the dog's lung A82-29567

BLOOD PUMPS
Evaluation of left ventricular assist device pump bladders cast from ion-sputtered polytetrafluorethylene mandrels [NASA-CR-167904] N82-23976

BLOOD VESSELS
Functional-morphological characteristics of microvessels of the rat liver under hypokinesia A82-31545

BLOOD VOLUME
Mechanism for the change in pulmonary blood volume upon the stimulation of the vagosympathetic trunk A82-29698

BODY COMPOSITION (BIOLOGY)
The effects of varying exercise intensities and durations on plasma high density lipoprotein-cholesterol, body composition and maximum oxygen consumption N82-23973

BODY FLUIDS
Body fluid and hematologic adjustments during resting cold acclimation in rhesus monkey A82-29565

BODY KINEMATICS
Aerodynamic forces experienced during ejection [AFAMRL-TR-80-16] N82-22078
The inverse dynamics of three-dimensional hominoid motion [CSIR-SWISK-24] N82-22087

BODY MEASUREMENT (BIOLOGY)
Anthropometric program analysis of reach and body movement N82-23124

BODY TEMPERATURE
Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves A82-29569
Effects of decimetric waves on the temperature of the brain and adjoining tissues /Experimental study/ A82-31510
A statistical model of the controller functions of the human temperature regulating system N82-23972

Safe wearing times for impermeable chemical protective clothing [IZF-1980-11] N82-23986

**BODY WEIGHT**
Dynamics of changes in animal body mass and skeletal musculature under conditions of hypokinesia A82-31533

**BONE MARROW**
The role of lymphocytes in the regeneration of hematopoiesis under condition of local irradiation A82-31535

**BONES**
Preliminary study of the effects of prolonged acceleration on spinal dynamics of baboons. 1: Acceleration. 2: Biomechanical analysis [AD-A101766] N82-22871

**BRAIN**
The interaction of tubulin with G-actin A82-29444
The state of vegetative functions with hypertension under the action of decimetric waves on the region of the brain /Experimental study/ A82-31508
Effects of decimetric waves on the temperature of the brain and adjoining tissues /Experimental study/ A82-31510

**BRAIN CIRCULATION**
Decimetric waves in the combined therapy of patients with cerebral circulatory insufficiency A82-31507
Changes of cardiac activity and regional cerebral circulation under gravitational effects simulated by antiorthostasis A82-31513

**BRAIN DAMAGE**
Destructive and reparative processes in the hippocampus upon prolonged exposure to nonionizing microwave radiation A82-31536

**BRIGHTNESS DISTRIBUTION**
Color fusion under conditions of equal brightness A82-31164

**BUOYANCY**
Anthropometric program analysis of reach and body movement N82-23124

**BURNS (INJURIES)**
Disturbances in the carbohydrate metabolism in shock. 3: Experimental hemorrhagic shock and some shock models. Review of the literature [MBL-1980-10] N82-23975

## C

**CALCIUM**
The role of methylation and Ca/2+/ in the photoaxis of Halobacterium halobium A82-31598
The Na/+/-induced release of Ca/2+/ from the sarcoplasmic reticulum during the excitation of phasic muscle fibers A82-31599

**CALCIUM METABOLISM**
Orientation of Ca/2+/-dependent ATPases in sarcoplasmic reticulum membranes and reconstructed proteoliposomes A82-29443

**CALORIC REQUIREMENTS**
The energy requirements of railway-bridge assemblers A82-31515

**CARBOHYDRATE METABOLISM**
Change in blood glucose level in rats after immobilization [NASA-TM-75997] N82-22872
Disturbances in the carbohydrate metabolism in shock. 3: Experimental hemorrhagic shock and some shock models. Review of the literature [MBL-1980-10] N82-23975

**CARBON DIOXIDE**
Mass mortality and its environmental and evolutionary consequences --- at end of Cretaceous period A82-28596
Role of the carotid chemoreceptors in regulation of inspiratory onset A82-29557

**CARBON FIBERS**
Development of the carbon fibre polysulphone toggle for ligament repair operations [CSIR-ME-1709] N82-22881

**CARBON MONOXIDE POISONING**
Paradoxical akinesia syndrome in cases of acute carbon monoxide poisoning A82-31544

**CARDIOVASCULAR SYSTEM**
Hemodynamic responses to methoxamine in exercise-conditioned and aorta-constricted rats A82-29562
Use of an active orthostatic test in aeromedical examinations A82-30028
Age characteristics of fatigue during local muscular work in humans A82-31487
The effect of decimeter waves on the functional state of the cardiovascular system, and some biochemical and immunological indices of patients with myocardial infarction in the recovery phase A82-31512
Cardiovascular adaptations in weightlessness: The influence of in-flight exercise programs on the cardiovascular adjustments during weightlessness and upon returning to Earth N82-23110
Response of the cardiovascular system to vibration and combined stresses [AD-A110494] N82-23970

**CAROTID SINUS BODY**
Role of the carotid chemoreceptors in regulation of inspiratory onset A82-29557

**CATALYTIC ACTIVITY**
Principles of enzyme stabilization - Polyacrylamide-gel-immobilized trypsin and chymotrypsin with high catalytic activity at elevated temperatures A82-29446

**CATECHOLAMINE**
Effects of novodrine and physical exercise on hemodynamics and coronary blood supply in the healthy human --- catecholamine effects A82-31157

**CATHODE RAY TUBES**
Health hazards of visual display units with particular reference to office environments [PB82-120627] N82-23979

**CELL DIVISION**
Mechanism for fluctuations in cell cycle duration A82-31529

**CELLS (BIOLOGY)**
Structural features of the receptor cells of the saccular macula of the common frog A82-29433
The effect of abnormal cell proportion on specimen classifier performance A82-30296
Evidence for a biological clock A82-30301
Effects of high-frequency ultrasound on adaptive changes in cell resistance A82-31546
Intracellular mechanism of the action of inhibin on the secretion of follicular stimulating hormone and of luteinizing hormone induced by LH-RH in vitro [NASA-TM-76847] N82-22869

**CENTRAL NERVOUS SYSTEM**
Reflection of individual characteristics of human and animal higher nervous activity in the nature of heart rate changes A82-31486

**CENTRIFUGING STRESS**
Preliminary study of the effects of prolonged acceleration on spinal dynamics of baboons. 1: Acceleration. 2: Biomechanical analysis [AD-A101766] N82-22871

**CEREBRAL CORTEX**
The effect of decimeter waves and sinusoidal modulated currents on the nuclear DNA content of cerebral nerve cells /Experimental study/ A82-31509

CHEMICAL COMPOSITION
Some indicators of human adaptation to humid tropical conditions
A82-31495

CHEMORECEPTORS
Role of the carotid chemoreceptors in regulation of inspiratory onset
A82-29557

Chemoreceptor involvement in cortisol responses to hypoxia in ventilated dogs
A82-29572

CHLOROPHYLLS
Effects of reversible manganese extraction on the light reactions of photosystem II preparations
A82-29816

CHLOROPLASTS
Linear dichroism of absorption changes upon the photoreduction of pheophytin in oriented preparations of photosystem II
A82-29442

CHOLESTEROL
The effects of varying exercise intensities and durations on plasma high density lipoprotein-cholesterol, body composition and maximum oxygen consumption
N82-23973

CHROMOSOMES
Thermal shock and gene operation
A82-30302

CHRONIC CONDITIONS
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization
A82-29556

CIRCADIAN RHYTHMS
The relationship between circadian and circannian rhythms of some parameters of the heart contractile function and vascular tension
A82-29807

Circadian rhythm dynamics under conditions of an altered gaseous medium and hypokinesia
A82-31151

Effects of geomagnetic field disturbances on the diurnal rhythm of physiological functions
A82-31152

Behavioral study of ultradian activity periods of mice enclosed in experimental cages of different dimensions
[NASA-TM-76848] N82-22870

CIVIL AVIATION
The state of hearing in pilots in civil aviation
A82-31520

CLASSIFICATIONS
Method for improving the reliability of the recognition and classification of worker physiological condition in problems of work physiology
A82-31156

CLASSIFIERS
The effect of abnormal cell proportion on specimen classifier performance
A82-30296

CLINICAL MEDICINE
NMR imaging in medicine
A82-29574

Current clinical approaches to mediastino-pulmonary sarcoidosis
A82-29993

The organization of blood transfusions and blood substitutes on board ships at sea
A82-30029

The value of spiroergography in the diagnosis of the initial stage of cardiac insufficiency
A82-30030

Perforated gastric and duodenal ulcers in servicemen
A82-30031

Clinical features of the effect of factory noise as a function of its type and spectral characteristics
A82-31519

Foreign body extraction from the left ptergopalatine fossa under fluoroscope control
A82-31539

Psychotherapeutic use of sleep deprivation in treating insomnia produced by psychic soporific dependence
A82-31543

Rapid diagnostic systems - A principle for diagnostic preparations and an analysis of the rapid systems --- for disease-causing microorganisms
A82-31548

Development of the carbon fibre polysulphone toggle for ligament repair operations
[CSIR-ME-1709] N82-22881

CLOSED ECOLOGICAL SYSTEMS
Competition between algae in a flow system
A82-31517

An approach to the mathematical modelling of a controlled ecological life support system
[NASA-CR-166331] N82-23984

Nutritional and cultural aspects of plant species selection for a controlled ecological life support system
[NASA-CR-166324] N82-23985

COCHLEA
A mathematical model of the dynamics of the inner ear
A82-29153

Electrophysiological studies of the auditory-receptor function in the case of the combined injection of kanamycin and lasix
A82-31537

COCKPITS
Analysis of pilot input concepts and devices into integrated display/control systems
[MBB-FE-301/S/PUB/40] N82-22884

COGNITIVE PSYCHOLOGY
Personalised task representation: Developments --- knowledge representation language
[AMTE(H)-TM-81104] N82-22885

COLD ACCLIMATIZATION
Thermal insulation and shivering threshold in Greek sponge divers
A82-29555

Adaptive changes in cats after long-term exposure to various temperatures
A82-29563

Body fluid and hematologic adjustments during resting cold acclimation in rhesus monkey
A82-29565

The ventilation-perfusion relation in residents of the Arctic coast of the north-east USSR
A82-31154

COLD TOLERANCE
Effects of ascorbic acid on the elevation of human cold tolerance
A82-30027

COLD WATER
Thermal insulation and shivering threshold in Greek sponge divers
A82-29555

COLOR VISION
Evidence for transient luminance and quasi-sustained color mechanisms --- in human vision
A82-30871

Color fusion under conditions of equal brightness
A82-31164

COMPRESSION LOADS
Preliminary study of the effects of prolonged acceleration on spinal dynamics of baboons. 1: Acceleration. 2: Biomechanical analysis
[AD-A101766] N82-22871

COMPUTER TECHNIQUES
Quantitative evaluation of hoarseness using a computer
A82-31540

COMPUTERIZED SIMULATION
Microgravity as an additional tool for research in human physiology: Simulation on ground; exposure to weightlessness; development of multi-user facilities
[ESA-BR-09] N82-22883

CONDITIONED REFLEXES
Conditioned reflexes in albino rats during space flight
A82-31524

CONSUMABLES (SPACECREW SUPPLIES)
Experimental study of high density foods for the Space Operations Center
N82-23109

CONTROL BOARDS
Analysis of pilot input concepts and devices into integrated display/control systems
[MBB-FE-301/S/PUB/40] N82-22884

CONTROL SIMULATION
Discrete models of a human operator /Survey of foreign research/
A82-31501

CONVERGENCE
The effect of convergence on the vestibulo-ocular reflex and implications for perceived movement
A82-30073

COPPER
Characteristics of iron and copper metabolism during athletic training
A82-31165

CORNEA
Calculation of the isochromatics and isoclinics of the cornea
A82-31530

CORONARY CIRCULATION
Comparative physiological responses to exercise stress
A82-29571
Effects of novodrine and physical exercise on hemodynamics and coronary blood supply in the healthy human --- catecholamine effects
A82-31157

CORTICOSTEROIDS
Chemoreceptor involvement in cortisol responses to hypoxia in ventilated dogs
A82-29572
Hormonal mechanisms of seasonal rhythms in rats
A82-31518

COSMONAUTS
A contribution to the history of Russian and Soviet aviation psychology: Documents and materials --- Russian book
A82-30875

COST ANALYSIS
An evaluation of some experimental data on the cost effectiveness of flight simulators
A82-29256

COST EFFECTIVENESS
An evaluation of some experimental data on the cost effectiveness of flight simulators
A82-29256

CREATINE
Effects of creatine phosphate on action potential duration and myocardial contractile force in the frog under hypoxia
A82-31532

CROP GROWTH
Literature review of human microbes' interaction with plants
[NASA-CR-166330] N82-23983
Nutritional and cultural aspects of plant species selection for a controlled ecological life support system
[NASA-CR-166324] N82-23985

CUES
Visual depth sensitivities of various cues for depth perception
A82-31447

CURVATURE
Contour curvature analysis - Hyperacuities in the discrimination of detailed shape --- human performance efficiency
A82-30872

CYTOLOGY
The interaction of tubulin with G-actin
A82-29444
The effect of abnormal cell proportion on specimen classifier performance
A82-30296

CYTOPLASM
New data on reverse electron transport in the respiratory chains of yeast mitochondria - The induction of reverse transport by exogenous NAD-H
A82-29445

D

DATA ACQUISITION
Anthropometric data error detecting and correction with a computer
N82-23115

DECIMETER WAVES
Decimetric waves in the combined therapy of patients with cerebral circulatory insufficiency
A82-31507
The state of vegetative functions with hypertension under the action of decimetric waves on the region of the brain /Experimental study/
A82-31508
The effect of decimeter waves and sinusoidal modulated currents on the nuclear DNA content of cerebral nerve cells /Experimental study/
A82-31509
Effects of decimetric waves on the temperature of the brain and adjoining tissues /Experimental study/
A82-31510
Immunodepressive and immunostimulatory effects of decimetric waves on the primary immunological response
A82-31511
The effect of decimeter waves on the functional state of the cardiovascular system, and some biochemical and immunological indices of patients with myocardial infarction in the recovery phase
A82-31512

DECISION MAKING
A model of human decisionmaking in multiple process monitoring situations
A82-29671
Recognition of vehicle targets from the air: A field test
[FOA-C-56027-H2] N82-22089

DELPHI METHOD (FORECASTING)
Application of Guided Inquiry System Technique (GIST) to Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166312] N82-22086

DEOXYRIBONUCLEIC ACID
The effect of decimeter waves and sinusoidal modulated currents on the nuclear DNA content of cerebral nerve cells /Experimental study/
A82-31509
Preventing disturbances to the structure of DNA in the cardiac muscle from emotional-nociceptive stress by blocking beta-adrenoreceptors and the peroxidation of lipids
A82-31528
Liquid-crystal state of nucleic acids in solution
A82-31597

DESERTS
Under the hot sun --- human heat acclimatization in deserts
A82-30303

DESIGN ANALYSIS
Study of protective mask type 33
[FOA-C-40134-C2] N82-22088

DIABETES MELLITUS
Diabetes mellitus and the examination of flight personnel
A82-29990
Diabetes and flight personnel - Ophthalmologic aspects
A82-29991

DIAGNOSIS
NMR imaging in medicine
A82-29574
The value of spiroergography in the diagnosis of the initial stage of cardiac insufficiency
A82-30030
Rapid diagnostic systems - A principle for diagnostic preparations and an analysis of the rapid systems --- for disease-causing microorganisms
A82-31548

DICHROISM
Linear dichroism of absorption changes upon the photoreduction of pheophytin in oriented preparations of photosystem II
A82-29442

DIMENSIONAL MEASUREMENT
Cervix-to-rectum measuring device in a radiation applicator for use in the treatment of cervical cancer
[NASA-CASE-GSC-12081-2] N82-22075

DISEASES
Rapid diagnostic systems - A principle for diagnostic preparations and an analysis of the rapid systems --- for disease-causing microorganisms
A82-31548

DISPLAY DEVICES
Analysis of pilot input concepts and devices into integrated display/control systems
[MBB-FE-301/S/PUB/40] N82-22884
Health hazards of visual display units with particular reference to office environments
[PB82-120627] N82-23979
DISTANCE
Visual depth sensitivities of various cues for depth perception
A82-31447
DISTRIBUTION FUNCTIONS
Method for improving the reliability of the recognition and classification of worker physiological condition in problems of work physiology
A82-31156
DIURNAL VARIATIONS
Eight-hour rhythm of autonomic regulation
A82-31542
DIVING (UNDERWATER)
Thermal insulation and shivering threshold in Greek sponge divers
A82-29555
DRUGS
The organ of vision and medicines used in treating psychological disorders /Survey/
A82-31525
Psychotherapeutic use of sleep deprivation in treating insomnia produced by psychic soporific dependence
A82-31543
DRY HEAT
Acclimatization to dry heat - Active men vs. active women
A82-29553
Effects of whole and partial body exposure to dry heat on certain performance measures
[AD-A100305] N82-22880
DYNAMIC CHARACTERISTICS
The inverse dynamics of three-dimensional hominoid motion
[CSIR-SWISK-24] N82-22887
DYNAMIC CONTROL
A stochastic model of a human operator in the manual control of a dynamic system
A82-29469
DYNAMIC LOADS
A comparative characterization of hemodynamics and respiration under static and dynamic loads
A82-31503

E

ECOLOGY
Application of Guided Inquiry System Technique (GIST) to Controlled Ecological life Support Systems (CELSS)
[NASA-CR-166312] N82-22886
CELSS scenario analysis: Breakeven calculations
[NASA-CR-166319] N82-23982
ECOSYSTEMS
Competition between algae in a flow system
A82-31517
EJECTION INJURIES
Aerodynamic forces experienced during ejection
[AFAMRL-TR-80-16] N82-22878
Analysis of vertebral stress distributions and ejection-related injury mechanisms
[AD-A098639] N82-22879
ELECTRIC CURRENT
The effect of decimeter waves and sinusoidal modulated currents on the nuclear DNA content of cerebral nerve cells /Experimental study/
A82-31509
ELECTRIC STIMULI
Mechanism for the change in pulmonary blood volume upon the stimulation of the vagosympathetic trunk
A82-29698
Investigation of the sensitivity of the vestibular apparatus to galvanic-current stimulation
A82-31541
ELECTROMAGNETIC RADIATION
Biological effects of high-frequency radiation - The concept of the specific absorption rate /SAR/ and its effect on safety regulations
A82-30952
ELECTROMETERS
Electrometric studies of the human gustatory analyzer in healthy persons and in the simulation of weightlessness
A82-31538
ELECTRON TRANSFER
The mechanism of the interaction of the triplet state of porphyrins and phthalocyanines with electron acceptors
A82-29432
New data on reverse electron transport in the respiratory chains of yeast mitochondria - The induction of reverse transport by exogenous NAD-H
A82-29445
ELECTROPHYSIOLOGY
Electrical stimulation of the exterior geniculate body induces eye movements
A82-29448
Features of the temporal organization of the activated phase of sleep in frogs and turtles
A82-31522
Electrophysiological studies of the auditory-receptor function in the case of the combined injection of kanamycin and lasix
A82-31537
Investigation of the sensitivity of the vestibular apparatus to galvanic-current stimulation
A82-31541
ELECTRORETINOGRAPHY
The damaging effects of light on the retina - The role of singlet oxygen and lipid peroxides
A82-29817
EMOTIONAL FACTORS
Relation of changes in autonomic reactions to the effectiveness of mental activity under conditions of emotional stress
A82-31150
ENVIRONMENT EFFECTS
Mass mortality and its environmental and evolutionary consequences --- at end of Cretaceous period
A82-28596
ENVIRONMENT MODELS
A comparison of models to predict annoyance reactions to noise from mixed sources
A82-29168
ENVIRONMENTS
A statistical model of the controller functions of the human temperature regulating system
N82-23972
ENZYME ACTIVITY
The interaction of actin with phosphorylase kinase
A82-29434
Orientation of Ca/2+/-dependent ATPases in sarcoplasmic reticulum membranes and reconstructed proteoliposomes
A82-29443
Principles of enzyme stabilization - Polyacrylamide-gel-immobilized trypsin and chymotrypsin with high catalytic activity at elevated temperatures
A82-29446
Lipoprotein lipase hydrolyzes endogenous triacylglycerols in muscle of exercised rats
A82-29570
The role of protein phosphorylation in neutral and hormonal control of cellular activity
A82-30766
Hormonal mechanisms of seasonal rhythms in rats
A82-31518
ERGOMETERS
The value of spiroergography in the diagnosis of the initial stage of cardiac insufficiency
A82-30030
ERROR SIGNALS
Anthropometric data error detecting and correction with a computer
N82-23115
ETIOLOGY
Etiological aspects of in-flight discomforts
A82-29989
Idiopathic spontaneous pneumothorax and the examination of flight personnel
A82-29995
EXERCISE PHYSIOLOGY
Determination of the anaerobic threshold by a noninvasive field test in runners
A82-29558

Time course of ultrastructural changes in skeletal muscle after two types of exercise
A82-29560

Delayed kinetics of respitratory gas exchange in the transition from prior exercise
A82-29561

Hemodynamic responses to methoxamine in exercise-conditioned and aorta-constricted rats
A82-29562

Effect of acid-base status on the kinetics of the ventilatory response to moderate exercise
A82-29564

Lipoprotein lipase hydrolyzes endogenous triacylglycerols in muscle of exercised rats
A82-29570

Comparative physiological responses to exercise stress
A82-29571

The efficiency coefficient of the rat heart and muscular system after physical training and hypokinesia
[NASA-TM-76843] N82-22868

Cardiovascular adaptations in weightlessness: The influence of in-flight exercise programs on the cardiovascular adjustments during weightlessness and upon returning to Earth
N82-23110

The effects of varying exercise intensities and durations on plasma high density lipoprotein-cholesterol, body composition and maximum oxygen consumption
N82-23973

EXOBIOLOGY
The use of a phytochrome-dependent reaction to assess the influence of space flight factors on a plant organism
A82-31547

EXPERIMENTAL DESIGN
Microgravity as an additional tool for research in human physiology: Simulation on ground; exposure to weightlessness; development of multi-user facilities
[ESA-BR-09] N82-22883
Dimensionality of measured achievement over time
[AD-A110955] N82-23981

EXPIRATION
Role of the carotid chemoreceptors in regulation of inspiratory onset
A82-29557

EXTRATERRESTRIAL ENVIRONMENTS
An approach to the mathematical modelling of a controlled ecological life support system
[NASA-CR-166331] N82-23984

EXTRATERRESTRIAL LIFE
Literature review of human microbes' interaction with plants
[NASA-CR-166330] N82-23983

EXTRATERRESTRIAL RADIO WAVES
Project OASIS: The design of a signal detector for the search for extraterrestrial intelligence
[NASA-TM-84738] N82-23987

EYE DISEASES
The organ of vision and medicines used in treating psychological disorders /Survey/
A82-31525

Effects of high-frequency ultrasound on adaptive changes in cell resistance
A82-31546

EYE MOVEMENTS
Electrical stimulation of the exterior geniculate body induces eye movements
A82-29448

Adaptation in motion perception - Alteration of motion evoked by ocular pursuit
A82-31812

F

FACE (ANATOMY)
Foreign body extraction from the left ptergopalatine fossa under fluoroscope control
A82-31539

FACTOR ANALYSIS
Dimensionality of measured achievement over time
[AD-A110955] N82-23981

FEEDBACK CONTROL
Discrete models of a human operator /Survey of foreign research/
A82-31501

FEMALES
Acclimatization to dry heat - Active men vs. active women
A82-29553

FLIGHT CREWS
An evaluation of the Nimrod Maritime Crew Trainer - A case study
A82-29255

The role of information feedback in aircrew training and its impact on the debriefing facilities
A82-29257

FLIGHT FITNESS
Etiological aspects of in-flight discomforts
A82-29989

Diabetes mellitus and the examination of flight personnel
A82-29990

Diabetes and flight personnel - Ophthalmologic aspects
A82-29991

Sarcoidosis and aeronautical aptitude
A82-29992

Idiopathic spontaneous pneumothorax and the examination of flight personnel
A82-29995

Sickle cell anemia and aviation
A82-29996

FLIGHT SIMULATION
Fuselage lights as a cause factor of vertigo in night formation flight - Perceiving pattern of fuselage light
A82-28925

The role of information feedback in aircrew training and its impact on the debriefing facilities
A82-29257

FLIGHT SIMULATORS
An evaluation of the Nimrod Maritime Crew Trainer - A case study
A82-29255

An evaluation of some experimental data on the cost effectiveness of flight simulators
A82-29256

Conducting studies of transfer of learning: A practical guide
[AD-A110569] N82-23980

FLIGHT STRESS (BIOLOGY)
The medical and public health challenge of space
A82-29266

FLIGHT TRAINING
The role of information feedback in aircrew training and its impact on the debriefing facilities
A82-29257

A selective attention test as a predictor of success in flight training
A82-31388

Conducting studies of transfer of learning: A practical guide
[AD-A110569] N82-23980

FLUOROSCOPY
Foreign body extraction from the left ptergopalatine fossa under fluoroscope control
A82-31539

FLYING PERSONNEL
Etiological aspects of in-flight discomforts
A82-29989

Diabetes mellitus and the examination of flight personnel
A82-29990

Diabetes and flight personnel - Ophthalmologic aspects
A82-29991

Sarcoidosis and aeronautical aptitude
A82-29992

Idiopathic spontaneous pneumothorax and the examination of flight personnel
A82-29995

Sickle cell anemia and aviation
A82-29996

Sequelae of spinal column traumas in aeronautical medicine
A82-29997

Changes in psychophysiological functions of flight personnel under various regimes of active rest
A82-31494

FOLDING
Protein folding, protein structure and the origin of life: Theoretical methods and solutions of dynamical problems
[NASA-CR-166318] N82-22867

FOOD INTAKE
Chylomicron triglyceride metabolism in resting and exercising fed dogs
A82-29551

FOOD PROCESSING
Application of Guided Inquiry System Technique (GIST) to Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166312] N82-22886

FREQUENCY RESPONSE
A mathematical model of the dynamics of the inner ear
A82-29153

FUSELAGES
Fuselage lights as a cause factor of vertigo in night formation flight - Perceiving pattern of fuselage light
A82-28925

G

GALVANIC SKIN RESPONSE
Investigation of the sensitivity of the vestibular apparatus to galvanic-current stimulation
A82-31541

GAMMA RAYS
The survival of dogs irradiated with lethal doses of gamma radiation under conditions of chemical radioprotection and subsequent therapy
A82-30033

GAS COMPOSITION
Circadian rhythm dynamics under conditions of an altered gaseous medium and hypokinesia
A82-31151

GAS DISSOCIATION
Theoretical analysis of optimal P50 --- for maximizing oxygen unloading in hypoxia
A82-29568

GAS EXCHANGE
Delayed kinetics of respiratory gas exchange in the transition from prior exercise
A82-29561

GASEOUS DIFFUSION
The ventilation-perfusion relation in residents of the Arctic coast of the north-east USSR
A82-31154

GEOCHEMISTRY
Mass mortality and its environmental and evolutionary consequences --- at end of Cretaceous period
A82-28596

GEOMAGNETISM
Effects of geomagnetic field disturbances on the diurnal rhythm of physiological functions
A82-31152
The relation between cardiac and respiratory rhythms as a function of the state of the geomagnetic field
A82-31153

GLANDS (ANATOMY)
Heat-activated sweat gland densities detected through macrophotography in lean and obese men exposed to a warm, humid environment
N82-22876

GLUCOSE
Change in blood glucose level in rats after immobilization
[NASA-TM-75997] N82-22872

GLYCERIDES
Chylomicron triglyceride metabolism in resting and exercising fed dogs
A82-29551

GLYCEROLS
Lipoprotein lipase hydrolyzes endogenous triacylglycerols in muscle of exercised rats
A82-29570

GLYCOGENS
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization
A82-29556
The role of protein phosphorylation in neutral and hormonal control of cellular activity
A82-30766

GRAVITATIONAL EFFECTS
Mechanism for the change in pulmonary blood volume upon the stimulation of the vagosympathetic trunk
A82-29698
For a prolonged stay in space
A82-30298
Anthropometric program analysis of reach and body movement
N82-23124

GYNECOLOGY
Cervix-to-rectum measuring device in a radiation applicator for use in the treatment of cervical cancer
[NASA-CASE-GSC-12081-2] N82-22875

H

HAZARDS
Health hazards of visual display units with particular reference to office environments
[PB82-120627] N82-23979

HEAD (ANATOMY)
Effects of whole and partial body exposure to dry heat on certain performance measures
[AD-A100305] N82-22880

HEAD MOVEMENT
The effect of convergence on the vestibulo-ocular reflex and implications for perceived movement
A82-30873

HEALTH PHYSICS
In the struggle for the health of sailors
A82-30026
Health hazards of visual display units with particular reference to office environments
[PB82-120627] N82-23979

HEARING
Clinical features of the effect of factory noise as a function of its type and spectral characteristics
A82-31519
The state of hearing in pilots in civil aviation
A82-31520

HEART DISEASES
The value of spiroergography in the diagnosis of the initial stage of cardiac insufficiency
A82-30030
Disturbances in the carbohydrate metabolism in shock. 3: Experimental hemorrhagic shock and some shock models. Review of the literature
[HDL-1980-10] N82-23975

HEART FUNCTION
The relationship between circadian and circannian rhythms of some parameters of the heart contractile function and vascular tension
A82-29807
The efficiency coefficient of the rat heart and muscular system after physical training and hypokinesia
[NASA-TM-76843] N82-22868

HEART RATE
Determination of the anaerobic threshold by a noninvasive field test in runners
A82-29558
The relation between cardiac and respiratory rhythms as a function of the state of the geomagnetic field
A82-31153
Cardiac rhythm regulation at rest and during orthostasis
A82-31160
The voluntary regulation of heart rate
A82-31161
An approach to the determination of the reflex reactions of cardiac rhythm
A82-31162
Reflection of individual characteristics of human and animal higher nervous activity in the nature of heart rate changes
A82-31486
Effects of creatine phosphate on action potential duration and myocardial contractile force in the frog under hypoxia
A82-31532
Eight-hour rhythm of autonomic regulation
A82-31542

HEAT ACCLIMATIZATION
Acclimatization to dry heat - Active men vs. active women
A82-29553

Adaptive changes in cats after long-term exposure to various temperatures
A82-29563

Comparative characteristics of respiratory and circulatory changes upon acute hyperthermia in cats
A82-29699

Thermal shock and game operation
A82-30302

Under the hot sun --- human heat acclimatization in deserts
A82-30303

Some indicators of human adaptation to humid tropical conditions
A82-31495

HEAT TRANSFER
Safe wearing times for impermeable chemical protective clothing
[IZF-1980-11] N82-23986

HEMATOLOGY
Body fluid and hematologic adjustments during resting cold acclimation in rhesus monkey
A82-29565

HEMATOPOIESIS
The role of lymphocytes in the regeneration of hematopoiesis under condition of local irradiation
A82-31535

HEMODYNAMIC RESPONSES
Hemodynamic responses to methoxamine in exercise-conditioned and aorta-constricted rats
A82-29562

Regional redistribution of blood flow in the cat under conditions of high ambient temperature
A82-29697

Mechanism for the change in pulmonary blood volume upon the stimulation of the vagosympathetic trunk
A82-29698

Comparative characteristics of respiratory and circulatory changes upon acute hyperthermia in cats
A82-29699

The relationship between circadian and circannian rhythms of some parameters of the heart contractile function and vascular tension
A82-29807

A comparative characterization of hemodynamics and respiration under static and dynamic loads
A82-31503

Changes of cardiac activity and regional cerebral circulation under gravitational effects simulated by antiorthostasis
A82-31513

Response of the cardiovascular system to vibration and combined stresses
[AD-A110494] N82-23978

HEMODYNAMICS
Functional diagrams of flow and volume for the dog's lung
A82-29567

The ventilation-perfusion relation in residents of the Arctic coast of the north-east USSR
A82-31154

Effects of novodrine and physical exercise on hemodynamics and coronary blood supply in the healthy human --- catecholamine effects
A82-31157

HEMOGLOBIN
Theoretical analysis of optimal P50 --- for maximizing oxygen unloading in hypoxia
A82-29568

HEMORRHAGES
Disturbances in the carbohydrate metabolism in shock. 3: Experimental hemorrhagic shock and some shock models. Review of the literature
[MBL-1980-10] N82-23975

HIGH ALTITUDE BREATHING
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization
A82-29556

HIGH FREQUENCIES
Biological effects of high-frequency radiation - The concept of the specific absorption rate /SAR/ and its effect on safety regulations
A82-30952

HIGH SPEED
Contrast sensitivity at high velocities --- measurement of visual sensitivity to rapidly moving stimuli
A82-30874

HIGH TEMPERATURE ENVIRONMENTS
Regional redistribution of blood flow in the cat under conditions of high ambient temperature
A82-29697

Effects of whole and partial body exposure to dry heat on certain performance measures
[AD-A100305] N82-22880

HIPPOCAMPUS
Destructive and reparative processes in the hippocampus upon prolonged exposure to nonionizing microwave radiation
A82-31536

HOMEOSTASIS
Competition between algae in a flow system
A82-31517

A statistical model of the controller functions of the human temperature regulating system
N82-23972

HORMONE METABOLISMS
Hormonal mechanisms of seasonal rhythms in rats
A82-31518

HORMONES
Study of the simultaneous effects of hormones and radioprotectors in the exposure of animals to ionizing radiation
A82-30032

The role of protein phosphorylation in neutral and hormonal control of cellular activity
A82-30766

Intracellular mechanism of the action of inhibin on the secretion of follicular stimulating hormone and of luteinizing hormone induced by LH-RH in vitro
[NASA-TM-76847] N82-22869

HOT WEATHER
Under the hot sun --- human heat acclimatization in deserts
A82-30303

HUMAN BEHAVIOR
Analysis of sickness rates --- in West German industry
[PRE-90097] N82-22882

HUMAN BEINGS
Circadian rhythm dynamics under conditions of an altered gaseous medium and hypokinesia
A82-31151

The formation in human ontogeny of the ability to reproduce a given rhythm
A82-31523

Literature review of human microbes' interaction with plants
[NASA-CR-166330] N82-23983

HUMAN BODY
Effect of upper body posture on forced inspiration and expiration
A82-29559

Age characteristics of fatigue during local muscular work in humans
A82-31487

Heat-activated sweat gland densities detected through macrophotography in lean and obese men exposed to a warm, humid environment
N82-22876

HUMAN FACTORS ENGINEERING
The role of biotechnology in the development of technical systems: A reference background
[FOA-C-56026-H2] N82-22874
Analysis of pilot input concepts and devices into integrated display/control systems
[NBB-FB-301/S/PUB/40] N82-22884
Study of protective mask type 33
[FOA-C-40138-C2] N82-22888
Recognition of vehicle targets from the air: A field test
[FOA-C-56027-H2] N82-22889

HUMAN PATHOLOGY
Decimetric waves in the combined therapy of patients with cerebral circulatory insufficiency
A82-31507

Foreign body extraction from the left pterygopalatine fossa under fluoroscope control
A82-31539

Paradoxical akinesia syndrome in cases of acute carbon monoxide poisoning
A82-31544

HUMAN PERFORMANCE
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization
A82-29556

A model of human decisionmaking in multiple process monitoring situations
A82-29671

Effects of novedrine and physical exercise on hemodynamics and coronary blood supply in the healthy human --- catecholamine effects
A82-31157

Performance effects of noise intensity, psychological set, and task type and complexity
A82-31389

Reflection of individual characteristics of human and animal higher nervous activity in the nature of heart rate changes
A82-31486

Some indicators of human adaptation to humid tropical conditions
A82-31495

A comparative characterization of hemodynamics and respiration under static and dynamic loads
A82-31503

The functional reserves of athletes
A82-31504

Changes in the peroxide metabolism of weight-lifters and wrestlers under the conditions of systematic muscular activity
A82-31505

Effects of whole and partial body exposure to dry heat on certain performance measures
[AD-A100305] N82-22880

Anthropometric program analysis of reach and body movement
N82-23124

Dimensionality of measured achievement over time
[AD-A110955] N82-23981

HUMAN REACTIONS

Effects of geomagnetic field disturbances on the diurnal rhythm of physiological functions
A82-31152

Electrometric studies of the human gustatory analyzer in healthy persons and in the simulation of weightlessness
A82-31538

HUMAN TOLERANCES

A comparison of models to predict annoyance reactions to noise from mixed sources
A82-29168

Effects of ascorbic acid on the elevation of human cold tolerance
A82-30027

Under the hot sun --- human heat acclimatization in deserts
A82-30303

Effects of starvation on human tolerance to acute hypoxia
A82-31159

Individual sensitivity to noise
A82-31521

Safe wearing times for impermeable chemical protective clothing
[IZF-1980-11] N82-23986

HUMIDITY

Some indicators of human adaptation to humid tropical conditions
A82-31495

HYDROELASTICITY

A mathematical model of the dynamics of the inner ear
A82-29153

HYDROGEN IONS

Sensing of the proton potential /Delta mu H/ in Halobacterium halobium
A82-29441

HYDROLYSIS

Lipoprotein lipase hydrolyzes endogenous triacylglycerols in muscle of exercised rats
A82-29570

HYPEROXIA

Effects of hyperbaric oxygenation on homocarnosine metabolism in the brains of rabbits of various ages
A82-31526

HYPERPNEA

Delayed kinetics of respiratory gas exchange in the transition from prior exercise
A82-29561

HYPERTENSION

The state of vegetative functions with hypertension under the action of decimetric waves on the region of the brain /Experimental study/
A82-31508

HYPERTHERMIA

Regional redistribution of blood flow in the cat under conditions of high ambient temperature
A82-29697

Comparative characteristics of respiratory and circulatory changes upon acute hyperthermia in cats
A82-29699

HYPOKINESIA

Circadian rhythm dynamics under conditions of an altered gaseous medium and hypokinesia
A82-31154

Dynamics of changes in animal body mass and skeletal musculature under conditions of hypokinesia
A82-31533

Paradoxical akinesia syndrome in cases of acute carbon monoxide poisoning
A82-31544

Functional-morphological characteristics of microvessels of the rat liver under hypokinesia
A82-31545

The efficiency coefficient of the rat heart and muscular system after physical training and hypokinesia
[NASA-TM-76843] N82-22868

Change in blood glucose level in rats after immobilization
[NASA-TM-75997] N82-22872

HYPOTHALAMUS

Evidence for a biological clock
A82-30301

Change in the volume density of hypothalamic neurons during prolonged immobilization-nociceptive stress
A82-31549

HYPOVOLEMIA

Decimetric waves in the combined therapy of patients with cerebral circulatory insufficiency
A82-31507

HYPOXIA

No effect of naloxone on hypoxia-induced ventilatory depression in adults
A82-29566

Theoretical analysis of optimal P50 --- for maximizing oxygen unloading in hypoxia
A82-29568

Chemoreceptor involvement in cortisol responses to hypoxia in ventilated dogs
A82-29572

Effects of starvation on human tolerance to acute hypoxia
A82-31159

Effects of creatine phosphate on action potential duration and myocardial contractile force in the frog under hypoxia
A82-31532

I

IMAGE CONTRAST

Contrast sensitivity at high velocities --- measurement of visual sensitivity to rapidly moving stimuli
A82-30874

IMAGING TECHNIQUES

NMR imaging in medicine
A82-29574

IMMOBILIZATION

Principles of enzyme stabilization - Polyacrylamide-gel-immobilized trypsin and chymotrypsin with high catalytic activity at elevated temperatures
A82-29486

Change in the volume density of hypothalamic neurons during prolonged immobilization-nociceptive stress
A82-31549

Change in blood glucose level in rats after immobilization
[NASA-TM-75997] N82-22872

IMMUNOLOGY
Immunodepressive and immunostimulatory effects of decimetric waves on the primary immunological response A82-31511
The effect of decimeter waves on the functional state of the cardiovascular system, and some biochemical and immunological indices of patients with myocardial infarction in the recovery phase A82-31512

INDUSTRIAL PLANTS
Clinical features of the effect of factory noise as a function of its type and spectral characteristics A82-31519

INFORMATION FLOW
The role of information feedback in aircrew training and its impact on the debriefing facilities A82-29257

INSOMNIA
Psychotherapeutic use of sleep deprivation in treating insomnia produced by psychic soporific dependence A82-31543

INTERNATIONAL COOPERATION
Microgravity as an additional tool for research in human physiology: Simulation on ground; exposure to weightlessness; development of multi-user facilities
[ESA-BR-09] N82-22883

INTRAOCULAR PRESSURE
Calculation of the isochromatics and isoclinics of the cornea A82-31530

INVESTIGATION
Heat-activated sweat gland densities detected through macrophotography in lean and obese men exposed to a warm, humid environment N82-22876

INVOLUNTARY ACTIONS
The state of vegetative functions with hypertension under the action of decimetric waves on the region of the brain /Experimental study/ A82-31508

ION EXCHANGE MEMBRANE ELECTROLYTES
Orientation of Ca/2+/-dependent ATPases in sarcoplasmic reticulum membranes and reconstructed proteoliposomes A82-29443

ION EXTRACTION
Effects of reversible manganese extraction on the light reactions of photosystem II preparations A82-29816

IONIZING RADIATION
Study of the simultaneous effects of hormones and radioprotectors in the exposure of animals to ionizing radiation A82-30032

IRON
Characteristics of iron and copper metabolism during athletic training A82-31165

ISOCHROMATICS
Calculation of the isochromatics and isoclinics of the cornea A82-31530

J

JOINTS (ANATOMY)
The inverse dynamics of three-dimensional hominoid motion
[CSIR-SWISK-24] N82-22887

L

LARYNX
Quantitative evaluation of hoarseness using a computer A82-31540

LESIONS
Sarcoidosis and aeronautical aptitude A82-29992

LEVEL (QUANTITY)
Experimental model with a supplementary source of endogenous serotonin A82-31534

LIFE SPAN
Evidence for a biological clock A82-30301

LIFE SUPPORT SYSTEMS
Application of Guided Inquiry System Technique (GIST) to Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166312] N82-22886
CELSS scenario analysis: Breakeven calculations
[NASA-CR-166319] N82-23982

LIGAMENTS
Development of the carbon fibre polysulphone toggle for ligament repair operations
[CSIR-ME-1709] N82-22881

LINEAR POLARIZATION
Linear dichroism of absorption changes upon the photoreduction of pheophytin in oriented preparations of photosystem II A82-29442

LIPID METABOLISM
Change in protein-lipid interactions upon the peroxide oxidation of blood serum lipoproteins A82-29447
Chylomicron triglyceride metabolism in resting and exercising fed dogs A82-29551
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization A82-29556
The damaging effects of light on the retina - The role of singlet oxygen and lipid peroxides A82-29817

LIPIDS
Mechanism for fluctuations in cell cycle duration A82-31529

LIPOPROTEINS
Orientation of Ca/2+/-dependent ATPases in sarcoplasmic reticulum membranes and reconstructed proteoliposomes A82-29443
Change in protein-lipid interactions upon the peroxide oxidation of blood serum lipoproteins A82-29447
Lipoprotein lipase hydrolyzes endogenous triacylglycerols in muscle of exercised rats A82-29570
The effects of varying exercise intensities and durations on plasma high density lipoprotein-cholesterol, body composition and maximum oxygen consumption N82-23973

LIQUID CRYSTALS
Liquid-crystal state of nucleic acids in solution A82-31597

LIVER
The interaction of actin with phosphorylase kinase A82-29434
Functional-morphological characteristics of microvessels of the rat liver under hypokinesia A82-31545

LOGIC DESIGN
Personalised task representation: Developments --- knowledge representation language
[AMTE(N)-TM-81104] N82-22885

LONG DURATION SPACE FLIGHT
For a prolonged stay in space A82-30298

LONG TERM EFFECTS
Adaptive changes in cats after long-term exposure to various temperatures A82-29563

LUMINANCE
Evidence for transient luminance and quasi-sustained color mechanisms --- in human vision A82-30871

LUNG MORPHOLOGY
Respiratory mechanics of a small carnivore - The ferret A82-29554

LUNGS
Functional diagrams of flow and volume for the dog's lung A82-29567

LYMPHOCYTES
The role of lymphocytes in the regeneration of hematopoiesis under condition of local irradiation
A82-31535

M

MAGNETIC DISTURBANCES
Effects of geomagnetic field disturbances on the diurnal rhythm of physiological functions
A82-31152

MAGNETIC FLUX
The relation between cardiac and respiratory rhythms as a function of the state of the geomagnetic field
A82-31153

MALES
Acclimatization to dry heat - Active men vs. active women
A82-29553

MAMMALS
Respiratory mechanics of a small carnivore - The ferret
A82-29554

MAN MACHINE SYSTEMS
A stochastic model of a human operator in the manual control of a dynamic system
A82-29465

A model of human decisionmaking in multiple process monitoring situations
A82-29671

The role of biotechnology in the development of technical systems: A reference background
[FOA-C-56026-H2] N82-22874

Personalised task representations: Developments --- knowledge representation language
[AMTE(E)-TM-81108] N82-22885

Project OASIS: The design of a signal detector for the search for extraterrestrial intelligence
[NASA-TM-84738] N82-23987

MANGANESE
Effects of reversible manganese extraction on the light reactions of photosystem II preparations
A82-29816

MANIPULATORS
Scheduling of parallel computation for a computer-controlled mechanical manipulator
A82-29672

MANUAL CONTROL
A stochastic model of a human operator in the manual control of a dynamic system
A82-29469

Discrete models of a human operator /Survey of foreign research/
A82-31501

MASKS
Study of protective mask type 33
[FOA-C-40134-C2] N82-22880

MATERIAL BALANCE
An approach to the mathematical modelling of a controlled ecological life support system
[NASA-CR-166331] N82-23984

MATHEMATICAL MODELS
Discrete models of a human operator /Survey of foreign research/
A82-31501

MECHANICAL DEVICES
Scheduling of parallel computation for a computer-controlled mechanical manipulator
A82-29672

MECHANICAL MEASUREMENT
Cervix-to-rectum measuring device in a radiation applicator for use in the treatment of cervical cancer
[NASA-CASE-GSC-12081-2] N82-22875

MEDICAL ELECTRONICS
NMR imaging in medicine
A82-29574

MEDICAL EQUIPMENT
Cervix-to-rectum measuring device in a radiation applicator for use in the treatment of cervical cancer
[NASA-CASE-GSC-12081-2] N82-22875

MEDICAL PERSONNEL
In the struggle for the health of sailors
A82-30026

MEDICAL SERVICES
The medical and public health challenge of space
A82-29266

In the struggle for the health of sailors
A82-30026

Ways to improve therapeutic and prophylactic assistance to water-transport workers
A82-31516

Rapid diagnostic systems - A principle for diagnostic preparations and an analysis of the rapid systems --- for disease-causing microorganisms
A82-31540

MEMBRANE STRUCTURES
Disclosure of the complex structure of the absorption spectrum of bacteriorhodopsin
A82-29806

MENTAL PERFORMANCE
Evaluation of human operator reliability according to physiological data
A82-31155

Relation of changes in autonomic reactions to the effectiveness of mental activity under conditions of emotional stress
A82-31158

METABOLISM
Adaptive changes in cats after long-term exposure to various temperatures
A82-29563

Effect of acid-base status on the kinetics of the ventilatory response to moderate exercise
A82-29564

Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569

Nutrition and athletics
A82-31502

METAL IONS
Effects of reversible manganese extraction on the light reactions of photosystem II preparations
A82-29816

The role of methylation and Ca/2+/ in the photoaxis of Halobacterium halobium
A82-31598

The Na/+/-induced release of Ca/2+/ from the sarcoplasmic reticulum during the excitation of phasic muscle fibers
A82-31599

MICROORGANISMS
Literature review of human microbes' interaction with plants
[NASA-CR-166330] N82-23983

MICROWAVES
Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569

The biological and therapeutic effect of microwaves
A82-31506

Destructive and reparative processes in the hippocampus upon prolonged exposure to nonionizing microwave radiation
A82-31536

The effect of pulsed microwaves on the breathing of mice
[FOA-C-54032-H2, H3] N82-22873

MILITARY PSYCHOLOGY
A contribution to the history of Russian and Soviet aviation psychology: Documents and materials --- Russian book
A82-30875

MILK
Specialized acidophilic products for the nourishment of athletes
A82-31514

MINERAL METABOLISM
Characteristics of iron and copper metabolism during athletic training
A82-31165

MITOCHONDRIA
New data on reverse electron transport in the respiratory chains of yeast mitochondria - The induction of reverse transport by exogenous NAD-H
A82-29445

Time course of ultrastructural changes in skeletal muscle after two types of exercise
A82-29560

MITOSIS
Evidence for a biological clock
A82-30301

MOLECULAR SPECTRA
Liquid-crystal state of nucleic acids in solution
A82-31597

MOMENT DISTRIBUTION
Analysis of vertebral stress distributions and ejection-related injury mechanisms [AD-A098639] N82-22879
MONITORS
A model of human decisionmaking in multiple process monitoring situations A82-29671
MORPHOLOGY
Evaluation of left ventricular assist device pump bladders cast from ion-sputtered polytetrafluoroethylene mandrels [NASA-CR-167904] N82-23976
MORTALITY
Mass mortality and its environmental and evolutionary consequences --- at end of Cretaceous period A82-28596
MOTION PERCEPTION
The effect of convergence on the vestibulo-ocular reflex and implications for perceived movement A82-30873
Adaptation in motion perception - Alteration of motion evoked by ocular pursuit A82-31412
MUSCLES
Sparing effect of chronic high-altitude exposure on muscle glycogen utilization A82-29556
Time course of ultrastructural changes in skeletal muscle after two types of exercise A82-29560
Lipoprotein lipase hydrolyzes endogenous triacylglycerols in muscle of exercised rats A82-29570
MUSCULAR FATIGUE
Respiratory muscle fatigue after marathon running A82-29552
Age characteristics of fatigue during local muscular work in humans A82-31467
Optimal use of electrophysiological indicators of muscular effort and fatigue N82-23134
MUSCULAR FUNCTION
Chylomicron triglyceride metabolism in resting and exercising fed dogs A82-29551
Changes in the peroxide metabolism of weight-lifters and wrestlers under the conditions of systematic muscular activity A82-31505
Calculation of the isochromatics and isoclinics of the cornea A82-31530
The Na/+/-induced release of Ca/2+/ from the sarcoplasmic reticulum during the excitation of phasic muscle fibers A82-31599
The efficiency coefficient of the rat heart and muscular system after physical training and hypokinesia [NASA-TM-76843] N82-22868
MUSCULOSKELETAL SYSTEM
Effects of reduced motor activity and water regimen on the growth of animals and their skeletal musculature A82-29440
The role of protein phosphorylation in neutral and hormonal control of cellular activity A82-30766
Adaptation of skeletal and cardiac muscle to elevated motor activity in hypo- and athyreotic rats A82-31527
Dynamics of changes in animal body mass and skeletal musculature under conditions of hypokinesia A82-31533
Development of the carbon fibre polysulphone toggle for ligament repair operations [CSIR-ME-1709] N82-22881
MYOCARDIAL INFARCTION
The effect of decimeter waves on the functional state of the cardiovascular system, and some biochemical and immunological indices of patients with myocardial infarction in the recovery phase A82-31512
MYOCARDIUM
Adaptation of skeletal and cardiac muscle to elevated motor activity in hypo- and athyreotic rats A82-31527
Preventing disturbances to the structure of DNA in the cardiac muscle from emotional-nociceptive stress by blocking beta-adrenoreceptors and the peroxidation of lipids A82-31528
Effects of creatine phosphate on action potential duration and myocardial contractile force in the frog under hypoxia A82-31532

N

NAVY
Medical research of naval personnel [RNP-3/81] N82-23977
NEUROMUSCULAR TRANSMISSION
Optimal use of electrophysiological indicators of muscular effort and fatigue N82-23134
NEURONS
The effect of decimeter waves and sinusoidal modulated currents on the nuclear DNA content of cerebral nerve cells /Experimental study/ A82-31509
Change in the volume density of hypothalamic neurons during prolonged immobilization-nociceptive stress A82-31549
NEUROPHYSIOLOGY
The effect of decimeter waves and sinusoidal modulated currents on the nuclear DNA content of cerebral nerve cells /Experimental study/ A82-31509
NIGHT FLIGHTS (AIRCRAFT)
Fuselage lights as a cause factor of vertigo in night formation flight - Perceiving pattern of fuselage light A82-28925
NOISE INTENSITY
Performance effects of noise intensity, psychological set, and task type and complexity A82-31389
Clinical features of the effect of factory noise as a function of its type and spectral characteristics A82-31519
NOISE SPECTRA
Clinical features of the effect of factory noise as a function of its type and spectral characteristics A82-31519
NOISE TOLERANCE
A comparison of models to predict annoyance reactions to noise from mixed sources A82-29168
Individual sensitivity to noise A82-31521
NORMAL DENSITY FUNCTIONS
The effect of abnormal cell proportion on specimen classifier performance A82-30296
NUCLEAR MAGNETIC RESONANCE
NMR imaging in medicine A82-29574
NUMERICAL ANALYSIS
Numerical methods for inferring evolutionary trees [DE82-002295] N82-23971
NUMERICAL CONTROL
Scheduling of parallel computation for a computer-controlled mechanical manipulator A82-29672
NUTRIENTS
CELSS scenario analysis: Breakeven calculations [NASA-CR-166319] N82-23982
NUTRITION
Effects of starvation on human tolerance to acute hypoxia A82-31159
Nutrition and athletics A82-31502
Specialized acidophilic products for the nourishment of athletes A82-31514

  Application of Guided Inquiry System Technique (GIST) to Controlled Ecological Life Support Systems (CELSS) [NASA-CR-166312] N82-22886
  Nutritional and cultural aspects of plant species selection for a controlled ecological life support system [NASA-CR-166324] N82-23985

NUTRITIONAL REQUIREMENTS
  Nutrition and athletics A82-31502
  The energy requirements of railway-bridge assemblers A82-31515
  Experimental study of high density foods for the Space Operations Center N82-23109

O

ONTOGENY
  The formation in human ontogeny of the ability to reproduce a given rhythm A82-31523

OPERATING COSTS
  An evaluation of some experimental data on the cost effectiveness of flight simulators A82-29256

OPERATOR PERFORMANCE
  An evaluation of the Nimrod Maritime Crew Trainer - A case study A82-29255
  A stochastic model of a human operator in the manual control of a dynamic system A82-29869
  Evaluation of human operator reliability according to physiological data A82-31155
  Discrete models of a human operator /Survey of foreign research/ A82-31501
  The energy requirements of railway-bridge assemblers A82-31515
  Ways to improve therapeutic and prophylactic assistance to water-transport workers A82-31516

OPERATORS (PERSONNEL)
  In the struggle for the health of sailors A82-30026
  Method for improving the reliability of the recognition and classification of worker physiological condition in problems of work physiology A82-31156
  Clinical features of the effect of factory noise as a function of its type and spectral characteristics A82-31519
  Individual sensitivity to noise A82-31521

OPHTHALMOLOGY
  Diabetes and flight personnel - Ophthalmologic aspects A82-29991

OPTICAL ILLUSION
  Evaluation of object size upon viewing through an aperture A82-31163

ORTHOSTATIC TOLERANCE
  Use of an active orthostatic test in aeromedical examinations A82-30028
  Cardiac rhythm regulation at rest and during orthostasis A82-31160
  Changes of cardiac activity and regional cerebral circulation under gravitational effects simulated by antiorthostasis A82-31513

OXIDATION
  Change in protein-lipid interactions upon the peroxide oxidation of blood serum lipoproteins A82-29447
  Mechanism for fluctuations in cell cycle duration A82-31529

OXIDATION-REDUCTION REACTIONS
  New data on reverse electron transport in the respiratory chains of yeast mitochondria - The induction of reverse transport by exogenous NAD-H A82-29445

OXYGEN
  Theoretical analysis of optimal P50 --- for maximizing oxygen unloading in hypoxia A82-29568
  The damaging effects of light on the retina - The role of singlet oxygen and lipid peroxides A82-29817

OXYGEN CONSUMPTION
  Determination of the anaerobic threshold by a noninvasive field test in runners A82-29558
  Delayed kinetics of respiratory gas exchange in the transition from prior exercise A82-29561
  Comparative physiological responses to exercise stress A82-29571
  The efficiency coefficient of the rat heart and muscular system after physical training and hypokinesia [NASA-TM-76843] N82-22868
  The effects of varying exercise intensities and durations on plasma high density lipoprotein-cholesterol, body composition and maximum oxygen consumption N82-23973

OXYGEN METABOLISM
  Changes in the peroxide metabolism of weight-lifters and wrestlers under the conditions of systematic muscular activity A82-31505

OXYGEN TENSION
  Determination of the anaerobic threshold by a noninvasive field test in runners A82-29558

OXYGENATION
  Effects of hyperbaric oxygenation on homocarnosine metabolism in the brains of rabbits of various ages A82-31526

P

PAIN
  Preventing disturbances to the structure of DNA in the cardiac muscle from emotional-nociceptive stress by blocking beta-adrenoreceptors and the peroxidation of lipids A82-31528
  Change in the volume density of hypothalamic neurons during prolonged immobilization-nociceptive stress A82-31549

PARALLEL PROCESSING (COMPUTERS)
  Scheduling of parallel computation for a computer-controlled mechanical manipulator A82-29672

PARTIAL PRESSURE
  Theoretical analysis of optimal P50 --- for maximizing oxygen unloading in hypoxia A82-29568

PATTERN RECOGNITION
  A model of human decisionmaking in multiple process monitoring situations A82-29671

PEPTIDES
  No effect of naloxone on hypoxia-induced ventilatory depression in adults A82-29566
  Effects of hyperbaric oxygenation on homocarnosine metabolism in the brains of rabbits of various ages A82-31526
  Theoretical conformational analysis of the neuropeptide inducing delta sleep A82-31531

PEROXIDES
  The damaging effects of light on the retina - The role of singlet oxygen and lipid peroxides A82-29817
  Changes in the peroxide metabolism of weight-lifters and wrestlers under the conditions of systematic muscular activity A82-31505

PERSONNEL
  Medical research of naval personnel [BBP-3/81] N82-23977

**PERSONNEL MANAGEMENT**
- Analysis of sickness rates --- in West German industry [PNR-90097] N82-22882

**PERSONNEL SELECTION**
- Investigation of the sensitivity of the vestibular apparatus to galvanic-current stimulation A82-31541

**PERSPIRATION**
- Some indicators of human adaptation to humid tropical conditions A82-31495

**PHOSPHATES**
- Effects of creatine phosphate on action potential duration and myocardial contractile force in the frog under hypoxia A82-31532

**PHOSPHORYLATION**
- The role of protein phosphorylation in neutral and hormonal control of cellular activity A82-30766

**PHOTOABSORPTION**
- Linear dichroism of absorption changes upon the photoreduction of pheophytin in oriented preparations of photosystem II A82-29442

**PHOTOCHEMICAL REACTIONS**
- The mechanism of the interaction of the triplet state of porphyrins and phthalocyanines with electron acceptors A82-29432
- The role of methylation and Ca/2+/ in the photoaxis of Halobacterium halobium A82-31598

**PHOTOOXIDATION**
- Effects of reversible manganese extraction on the light reactions of photosystem II preparations A82-29616

**PHOTORECEPTORS**
- The damaging effects of light on the retina - The role of singlet oxygen and lipid peroxides A82-29817

**PHOTOSENSITIVITY**
- Sensing of the proton potential /Delta mu H/ in Halobacterium halobium A82-29441
- The role of methylation and Ca/2+/ in the photoaxis of Halobacterium halobium A82-31598

**PHOTOSTRESSES**
- The use of a phytochrome-dependent reaction to assess the influence of space flight factors on a plant organism A82-31547

**PHOTOSYNTHESIS**
- Linear dichroism of absorption changes upon the photoreduction of pheophytin in oriented preparations of photosystem II A82-29442

**PHTHALOCYANIN**
- The mechanism of the interaction of the triplet state of porphyrins and phthalocyanines with electron acceptors A82-29432

**PHYSICAL EXAMINATIONS**
- Use of an active orthostatic test in aeromedical examinations A82-30028

**PHYSICAL EXERCISE**
- Chylomicron triglyceride metabolism in resting and exercising fed dogs A82-29551
- Respiratory muscle fatigue after marathon running A82-29552
- Acclimatization to dry heat - Active men vs. active women A82-29553
- Effect of upper body posture on forced inspiration and expiration A82-29559
- The value of spiroergography in the diagnosis of the initial stage of cardiac insufficiency A82-30030
- Effects of novodrine and physical exercise on hemodynamics and coronary blood supply in the healthy human --- catecholamine effects A82-31157
- Characteristics of iron and copper metabolism during athletic training A82-31165
- Changes in psychophysiological functions of flight personnel under various regimes of active rest A82-31494
- Changes in the peroxide metabolism of weight-lifters and wrestlers under the conditions of systematic muscular activity A82-31505
- Specialized acidophilic products for the nourishment of athletes A82-31516
- Adaptation of skeletal and cardiac muscle to elevated motor activity in hypo- and athyreotic rats A82-31527

**PHYSICAL FITNESS**
- Time course of ultrastructural changes in skeletal muscle after two types of exercise A82-29560
- The efficiency coefficient of the rat heart and muscular system after physical training and hypokinesia [NASA-TM-76843] N82-22868
- Medical research of naval personnel [RNP-3/81] N82-23977

**PHYSICAL WORK**
- Method for improving the reliability of the recognition and classification of worker physiological condition in problems of work physiology A82-31156
- The energy requirements of railway-bridge assemblers A82-31515

**PHYSIOLOGICAL EFFECTS**
- The interaction of actin with phosphorylase kinase A82-29434
- Regional redistribution of blood flow in the cat under conditions of high ambient temperature A82-29697
- Study of the simultaneous effects of hormones and radioprotectors in the exposure of animals to ionizing radiation A82-30032
- For a prolonged stay in space A82-30298
- Under the hot sun --- human heat acclimatization in deserts A82-30303
- Circadian rhythm dynamics under conditions of an altered gaseous medium and hypokinesia A82-31151
- Effects of geomagnetic field disturbances on the diurnal rhythm of physiological functions A82-31152
- The relation between cardiac and respiratory rhythms as a function of the state of the geomagnetic field A82-31153
- The ventilation-perfusion relation in residents of the Arctic coast of the north-east USSR A82-31154
- Effects of starvation on human tolerance to acute hypoxia A82-31159
- Cardiac rhythm regulation at rest and during orthostasis A82-31160
- The voluntary regulation of heart rate A82-31161
- Changes in psychophysiological functions of flight personnel under various regimes of active rest A82-31494
- Clinical features of the effect of factory noise as a function of its type and spectral characteristics A82-31519
- Preventing disturbances to the structure of DNA in the cardiac muscle from emotional-nociceptive stress by blocking beta-adrenoreceptors and the peroxidation of lipids A82-31528
- Experimental model with a supplementary source of endogenous serotonin A82-31534
- Eight-hour rhythm of autonomic regulation A82-31542

Microgravity as an additional tool for research in human physiology: Simulation on ground; exposure to weightlessness; development of multi-user facilities
[ESA-BR-09] N82-22883

PHYSIOLOGICAL FACTORS
Evaluation of human operator reliability according to physiological data
A82-31155
Method for improving the reliability of the recognition and classification of worker physiological condition in problems of work physiology
A82-31156

PHYSIOLOGICAL RESPONSES
The medical and public health challenge of space
A82-29266
Respiratory muscle fatigue after marathon running
A82-29552
Acclimatization to dry heat - Active men vs. active women
A82-29553
Effect of acid-base status on the kinetics of the ventilatory response to moderate exercise
A82-29564
Body fluid and hematologic adjustments during resting cold acclimation in rhesus monkey
A82-29565
Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569
Relation of changes in autonomic reactions to the effectiveness of mental activity under conditions of emotional stress
A82-31158
An approach to the determination of the reflex reactions of cardiac rhythm
A82-31162
Reflection of individual characteristics of human and animal higher nervous activity in the nature of heart rate changes
A82-31486
Nutrition and athletics
A82-31502
The biological and therapeutic effect of microwaves
A82-31506
The state of vegetative functions with hypertension under the action of decimetric waves on the region of the brain /Experimental study/
A82-31508
Dynamics of changes in animal body mass and skeletal musculature under conditions of hypokinesia
A82-31533
Electrophysiological studies of the auditory-receptor function in the case of the combined injection of kanamycin and lasix
A82-31537
Investigation of the sensitivity of the vestibular apparatus to galvanic-current stimulation
A82-31541
Functional-morphological characteristics of microvessels of the rat liver under hypokinesia
A82-31545

PHYSIOLOGICAL TESTS
Use of an active orthostatic test in aeromedical examinations
A82-30028
Effects of hyperbaric oxygenation on homocarnosine metabolism in the brains of rabbits of various ages
A82-31526

PIGMENTS
Disclosure of the complex structure of the absorption spectrum of bacteriorhodopsin
A82-29806

PILOT PERFORMANCE
The state of hearing in pilots in civil aviation
A82-31520
Conducting studies of transfer of learning: A practical guide
[AD-A110569] N82-23980

PILOT SELECTION
A selective attention test as a predictor of success in flight training
A82-31388

PILOT TRAINING
Conducting studies of transfer of learning: A practical guide
[AD-A110569] N82-23980

PITUITARY HORMONES
Intracellular mechanism of the action of inhibin on the secretion of follicular stimulating hormone and of luteinizing hormone induced by LH-RH in vitro
[NASA-TM-76847] N82-22869

PLANT STRESS
The use of a phytochrome-dependent reaction to assess the influence of space flight factors on a plant organism
A82-31547

PLANTS (BOTANY)
Application of Guided Inquiry System Technique (GIST) to Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166312] N82-22886
Literature review of human microbes' interaction with plants
[NASA-CR-166330] N82-23983
Nutritional and cultural aspects of plant species selection for a controlled ecological life support system
[NASA-CR-166324] N82-23985

PNEUMOTHORAX
Spontaneous pneumothorax in a military environment
A82-29994
Idiopathic spontaneous pneumothorax and the examination of flight personnel
A82-29995

POLYMER CHEMISTRY
Evaluation of left ventricular assist device pump bladders cast from ion-sputtered polytetrafluoroethylene mandrels
[NASA-CR-167904] N82-23976

POLYTETRAFLUOROETHYLENE
Evaluation of left ventricular assist device pump bladders cast from ion-sputtered polytetrafluoroethylene mandrels
[NASA-CR-167904] N82-23976

PORPHYRINS
The mechanism of the interaction of the triplet state of porphyrins and phthalocyanines with electron acceptors
A82-29432

POSTURE
Effect of upper body posture on forced inspiration and expiration
A82-29559

PROBLEM SOLVING
Application of Guided Inquiry System Technique (GIST) to Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166312] N82-22886

PROCEDURES
Application of Guided Inquiry System Technique (GIST) to Controlled Ecological Life Support Systems (CELSS)
[NASA-CR-166312] N82-22886

PROJECT SETI
Project OASIS: The design of a signal detector for the search for extraterrestrial intelligence
[NASA-TM-84738] N82-23987

PROPHYLAXIS
Ways to improve therapeutic and prophylactic assistance to water-transport workers
A82-31516

PROTECTIVE CLOTHING
Study of protective mask type 33
[FOA-C-40134-C2] N82-22888
Safe wearing times for impermeable chemical protective clothing
[IZF-1980-11] N82-23986

PROTEIN METABOLISM
Change in protein-lipid interactions upon the peroxide oxidation of blood serum lipoproteins
A82-29847
Study of the simultaneous effects of hormones and radioprotectors in the exposure of animals to ionizing radiation
A82-30032
The role of protein phosphorylation in neutral and hormonal control of cellular activity
A82-30766

PROTEIN SYNTHESIS
The interaction of tubulin with G-actin
A82-29444
Protein folding, protein structure and the origin of life: Theoretical methods and solutions of dynamical problems
[NASA-CR-166318] N82-22867
PROTEINS
The interaction of actin with phosphorylase kinase
A82-29434
Thermal shock and gene operation
A82-30302
Protein folding, protein structure and the origin of life: Theoretical methods and solutions of dynamical problems
[NASA-CR-166318] N82-22867
PROTONS
Sensing of the proton potential /Delta mu H/ in Halobacterium halobium
A82-29441
PSYCHOACOUSTICS
Performance effects of noise intensity, psychological set, and task type and complexity
A82-31309
PSYCHOLOGICAL EFFECTS
Changes in psychophysiological functions of flight personnel under various regimes of active rest
A82-31494
PSYCHOLOGICAL FACTORS
Method for improving the reliability of the recognition and classification of worker physiological condition in problems of work physiology
A82-31156
Analysis of sickness rates --- in West German industry
[PNR-90097] N82-22882
PSYCHOLOGICAL SETS
Performance effects of noise intensity, psychological set, and task type and complexity
A82-31309
PSYCHOMOTOR PERFORMANCE
Effects of reduced motor activity and water regimes on the growth of animals and their skeletal musculature
A82-29440
Electrical stimulation of the exterior geniculate body induces eye movements
A82-29448
The functional reserves of athletes
A82-31504
Functional-morphological characteristics of microvessels of the rat liver under hypokinesia
A82-31545
PSYCHOPHARMACOLOGY
The organ of vision and medicines used in treating psychological disorders /Survey/
A82-31525
PSYCHOPHYSIOLOGY
Reflection of individual characteristics of human and animal higher nervous activity in the nature of heart rate changes
A82-31486
Changes in psychophysiological functions of flight personnel under various regimes of active rest
A82-31494
The functional reserves of athletes
A82-31504
PSYCHOSOMATICS
The voluntary regulation of heart rate
A82-31161
Analysis of sickness rates --- in West German industry
[PNR-90097] N82-22882
PSYCHOTHERAPY
Psychotherapeutic use of sleep deprivation in treating insomnia produced by psychic soporific dependence
A82-31543
PUBLIC HEALTH
The medical and public health challenge of space
A82-29266
PULMONARY CIRCULATION
Functional diagrams of flow and volume for the dog's lung
A82-29567
Mechanism for the change in pulmonary blood volume upon the stimulation of the vagosympathetic trunk
A82-29698
PULMONARY LESIONS
Current clinical approaches to mediastino-pulmonary sarcoidosis
A82-29993
PULSED RADIATION
The effect of pulsed microwaves on the breathing of mice
[FOA-C-54032-H2, H3] N82-22873
PURSUIT TRACKING
Adaptation in motion perception - Alteration of motion evoked by ocular pursuit
A82-31412
Discrete models of a human operator /Survey of foreign research/
A82-31501

Q

QUEUEING THEORY
A model of human decisionmaking in multiple process monitoring situations
A82-29671

R

RADIATION ABSORPTION
Biological effects of high-frequency radiation - The concept of the specific absorption rate /SAR/ and its effect on safety regulations
A82-30952
RADIATION DOSAGE
Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569
The survival of dogs irradiated with lethal doses of gamma radiation under conditions of chemical radioprotection and subsequent therapy
A82-30033
RADIATION EFFECTS
Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569
Biological effects of high-frequency radiation - The concept of the specific absorption rate /SAR/ and its effect on safety regulations
A82-30952
Immunodepressive and immunostimulatory effects of decimetric waves on the primary immunological response
A82-31511
Destructive and reparative processes in the hippocampus upon prolonged exposure to nonionizing microwave radiation
A82-31536
The effect of pulsed microwaves on the breathing of mice
[FOA-C-54032-H2, H3] N82-22873
RADIATION MEDICINE
Study of the simultaneous effects of hormones and radioprotectors in the exposure of animals to ionizing radiation
A82-30032
RADIATION PROTECTION
Biological effects of high-frequency radiation - The concept of the specific absorption rate /SAR/ and its effect on safety regulations
A82-30952
RADIATION THERAPY
The survival of dogs irradiated with lethal doses of gamma radiation under conditions of chemical radioprotection and subsequent therapy
A82-30033
The biological and therapeutic effect of microwaves
A82-31506
Decimetric waves in the combined therapy of patients with cerebral circulatory insufficiency
A82-31507
Cervix-to-rectum measuring device in a radiation applicator for use in the treatment of cervical cancer
[NASA-CASE-GSC-12081-2] N82-22875
RADIOBIOLOGY
Disclosure of the complex structure of the absorption spectrum of bacteriorhodopsin
A82-29806
The biological and therapeutic effect of microwaves
A82-31506

Effects of decimetric waves on the temperature of the brain and adjoining tissues /Experimental study/
A82-31510

Immunodepressive and immunostimulatory effects of decimetric waves on the primary immunological response
A82-31511

The effect of decimeter waves on the functional state of the cardiovascular system, and some biochemical and immunological indices of patients with myocardial infarction in the recovery phase
A82-31512

The role of lymphocytes in the regeneration of hematopoiesis under condition of local irradiation
A82-31535

Destructive and reparative processes in the hippocampus upon prolonged exposure to nonionizing microwave radiation
A82-31536

REACTION TIME

Evidence for transient luminance and quasi-sustained color mechanisms --- in human vision
A82-30871

REAL TIME OPERATION

Project OASIS: The design of a signal detector for the search for extraterrestrial intelligence
[NASA-TM-84730] N82-23987

RECEPTORS (PHYSIOLOGY)

Structural features of the receptor cells of the saccular macula of the common frog
A82-29433

Sensing of the proton potential /Delta mu H/ in Halobacterium halobium
A82-29441

RECONNAISSANCE AIRCRAFT

An evaluation of the Nimrod Maritime Crew Trainer - A case study
A82-29255

RECTUM

Cervix-to-rectum measuring device in a radiation applicator for use in the treatment of cervical cancer
[NASA-CASE-GSC-12081-2] N82-22875

Safe wearing times for impermeable chemical protective clothing
[IZF-1980-11] N82-23986

REDUCED GRAVITY

Anthropometric program analysis of reach and body movement
N82-23124

REDUCTION (CHEMISTRY)

Linear dichroism of absorption changes upon the photoreduction of pheophytin in oriented preparations of photosystem II
A82-29442

Effects of reversible manganese extraction on the light reactions of photosystem II preparations
A82-29816

REGENERATION (PHYSIOLOGY)

The role of lymphocytes in the regeneration of hematopoiesis under condition of local irradiation
A82-31535

RELAXATION (PHYSIOLOGY)

Chylomicron triglyceride metabolism in resting and exercising fed dogs
A82-29551

REPTILES

Features of the temporal organization of the activated phase of sleep in frogs and turtles
A82-31522

RESEARCH

Medical research of naval personnel
[RNP-3/81] N82-23977

RESPIRATION

The effect of pulsed microwaves on the breathing of mice
[FOA-C-54032-H2, H3] N82-22873

RESPIRATORY PHYSIOLOGY

Respiratory muscle fatigue after marathon running
A82-29552

Respiratory mechanics of a small carnivore - The ferret
A82-29554

Effect of upper body posture on forced inspiration and expiration
A82-29559

Delayed kinetics of respitratory gas exchange in the transition from prior exercise
A82-29561

Effect of acid-base status on the kinetics of the ventilatory response to moderate exercise
A82-29564

No effect of naloxone on hypoxia-induced ventilatory depression in adults
A82-29566

Comparative characteristics of respiratory and circulatory changes upon acute hyperthermia in cats
A82-29699

The ventilation-perfusion relation in residents of the Arctic coast of the north-east USSR
A82-31154

A comparative characterization of hemodynamics and respiration under static and dynamic loads
A82-31503

RESPIRATORY RATE

Role of the carotid chemoreceptors in regulation of inspiratory onset
A82-29557

The relation between cardiac and respiratory rhythms as a function of the state of the geomagnetic field
A82-31153

RESPIRATORY REFLEXES

The voluntary regulation of heart rate
A82-31161

An approach to the determination of the reflex reactions of cardiac rhythm
A82-31162

RESPIRATORY SYSTEM

New data on reverse electron transport in the respiratory chains of yeast mitochondria - The induction of reverse transport by exogenous NAD-H
A82-29445

Age characteristics of fatigue during local muscular work in humans
A82-31487

REST

Cardiac rhythm regulation at rest and during orthostasis
A82-31160

Changes in psychophysiological functions of flight personnel under various regimes of active rest
A82-31494

RETINA

The damaging effects of light on the retina - The role of singlet oxygen and lipid peroxides
A82-29817

RETINAL ADAPTATION

Effects of high-frequency ultrasound on adaptive changes in cell resistance
A82-31546

RETINAL IMAGES

Evaluation of object size upon viewing through an aperture
A82-31163

RHYTHM (BIOLOGY)

Evidence for a biological clock
A82-30301

The relation between cardiac and respiratory rhythms as a function of the state of the geomagnetic field
A82-31153

Cardiac rhythm regulation at rest and during orthostasis
A82-31160

An approach to the determination of the reflex reactions of cardiac rhythm
A82-31162

Hormonal mechanisms of seasonal rhythms in rats
A82-31518

The formation in human ontogeny of the ability to reproduce a given rhythm
A82-31523

Eight-hour rhythm of autonomic regulation
A82-31542

ROBOTS

Scheduling of parallel computation for a computer-controlled mechanical manipulator
A82-29672

RUNNING

Respiratory muscle fatigue after marathon running
A82-29552

Determination of the anaerobic threshold by a noninvasive field test in runners
A82-29558
Effect of upper body posture on forced inspiration and expiration
A82-29559

S

SACCADIC EYE MOVEMENTS
Perception of suprathreshold stimuli during saccadic eye movement
A82-30670
SAFETY FACTORS
Study of protective mask type 33
[FOA-C-40134-C2] N82-22880
SCALE (RATIO)
Visual depth sensitivities of various cues for depth perception
A82-31447
SCALE MODELS
Microgravity as an additional tool for research in human physiology: Simulation on ground; exposure to weightlessness; development of multi-user facilities
[ESA-SR-09] N82-22883
SCHEDULING
Scheduling of parallel computation for a computer-controlled mechanical manipulator
A82-29672
SEEDS
The use of a phytochrome-dependent reaction to assess the influence of space flight factors on a plant organism
A82-31547
SENSORIMOTOR PERFORMANCE
Adaptation in motion perception - Alteration of motion evoked by ocular pursuit
A82-31412
SEROTONIN
Experimental model with a supplementary source of endogenous serotonin
A82-31534
SERUMS
Change in protein-lipid interactions upon the peroxide oxidation of blood serum lipoproteins
A82-29847
Rapid diagnostic systems - A principle for diagnostic preparations and an analysis of the rapid systems --- for disease-causing microorganisms
A82-31548
SHIPS
In the struggle for the health of sailors
A82-30026
The organization of blood transfusions and blood substitutes on board ships at sea
A82-30029
SHIVERING
Thermal insulation and shivering threshold in Greek sponge divers
A82-29555
SHOCK (PHYSIOLOGY)
Disturbances in the carbohydrate metabolism in shock. 3: Experimental hemorrhagic shock and some shock models. Review of the literature
[MBL-1980-10] N82-23975
SICKNESSES
Etiological aspects of in-flight discomforts
A82-29989
Analysis of sickness rates --- in West German industry
[PHB-90097] N82-22882
SIGNAL DETECTORS
Project OASIS: The design of a signal detector for the search for extraterrestrial intelligence
[NASA-TM-84730] N82-23987
SIGNAL TRANSMISSION
Anthropometric data error detecting and correction with a computer
N82-23115
SIZE (DIMENSIONS)
Evaluation of object size upon viewing through an aperture
A82-31163
SKYLAB PROGRAM
Experimental study of high density foods for the Space Operations Center
N82-23109

Cardiovascular adaptations in weightlessness: The influence of in-flight exercise programs on the cardiovascular adjustments during weightlessness and upon returning to Earth
N82-23110
SLEEP
Features of the temporal organization of the activated phase of sleep in frogs and turtles
A82-31522
Theoretical conformational analysis of the neuropeptide inducing delta sleep
A82-31531
SLEEP DEPRIVATION
Psychotherapeutic use of sleep deprivation in treating insomnia produced by psychic soporific dependence
A82-31543
SOCIAL FACTORS
Analysis of sickness rates --- in West German industry
[PHB-90097] N82-22882
SODIUM
The Na/+/-induced release of Ca/2+/ from the sarcoplasmic reticulum during the excitation of phasic muscle fibers
A82-31599
SPACE FLIGHT FEEDING
Experimental study of high density foods for the Space Operations Center
N82-23109
CELSS scenario analysis: Breakeven calculations
[NASA-CR-166319] N82-23982
Nutritional and cultural aspects of plant species selection for a controlled ecological life support system
[NASA-CR-166324] N82-23985
SPACE FLIGHT STRESS
Changes of cardiac activity and regional cerebral circulation under gravitational effects simulated by antiorthostasis
A82-31513
Conditioned reflexes in albino rats during space flight
A82-31524
The use of a phytochrome-dependent reaction to assess the influence of space flight factors on a plant organism
A82-31547
SPACE INDUSTRIALIZATION
The medical and public health challenge of space
A82-29266
SPACE MISSIONS
Nutritional and cultural aspects of plant species selection for a controlled ecological life support system
[NASA-CR-166324] N82-23985
SPACE PERCEPTION
Electrical stimulation of the exterior geniculate body induces eye movements
A82-29448
Contour curvature analysis - Hyperacuities in the discrimination of detailed shape --- human performance efficiency
A82-30872
Visual depth sensitivities of various cues for depth perception
A82-31447
SPACE PROGRAMS
Experimental study of high density foods for the Space Operations Center
N82-23109
SPACECRAFT ENVIRONMENTS
Optimal use of electrophysiological indicators of muscular effort and fatigue
N82-23134
SPACECREWS
Optimal use of electrophysiological indicators of muscular effort and fatigue
N82-23134
SPECIMENS
The effect of abnormal cell proportion on specimen classifier performance
A82-30296
SPECTRAL SENSITIVITY
Color fusion under conditions of equal brightness
A82-31164

SPEECH DEFECTS
  Quantitative evaluation of hoarseness using a computer A82-31540
SPINE
  Preliminary study of the effects of prolonged acceleration on spinal dynamics of baboons. 1: Acceleration. 2: Biomechanical analysis [AD-A101766] N82-22871
SPIROMETRY
  The value of spiroergography in the diagnosis of the initial stage of cardiac insufficiency A82-30030
STATIC LOADS
  A comparative characterization of hemodynamics and respiration under static and dynamic loads A82-31503
STATISTICAL ANALYSIS
  A statistical model of the controller functions of the human temperature regulating system N82-23972
STATISTICAL DISTRIBUTIONS
  Recognition of vehicle targets from the air: A field test [FOA-C-56027-H2] N82-22889
STOCHASTIC PROCESSES
  A stochastic model of a human operator in the manual control of a dynamic system A82-29469
STRATIGRAPHY
  Mass mortality and its environmental and evolutionary consequences --- at end of Cretaceous period A82-28596
STRESS (PHYSIOLOGY)
  Comparative physiological responses to exercise stress A82-29571
  The relationship between circadian and circasian rhythms of some parameters of the heart contractile function and vascular tension A82-29807
  Changes in the peroxide metabolism of weight-lifters and wrestlers under the conditions of systematic muscular activity A82-31505
  Specialized acidophilic products for the nourishment of athletes A82-31514
  Hormonal mechanisms of seasonal rhythms in rats A82-31510
  Change in the volume density of hypothalamic neurons during prolonged immobilization-nociceptive stress A82-31549
STRESS (PSYCHOLOGY)
  Relation of changes in autonomic reactions to the effectiveness of mental activity under conditions of emotional stress A82-31158
  Preventing disturbances to the structure of DNA in the cardiac muscle from emotional-nociceptive stress by blocking beta-adrenoreceptors and the peroxidation of lipids A82-31520
STRESS CONCENTRATION
  Analysis of vertebral stress distributions and ejection-related injury mechanisms [AD-A098639] N82-22879
SULFONES
  Development of the carbon fibre polysulphone toggle for ligament repair operations [CSIR-ME-1709] N82-22881
SURFACE ROUGHNESS
  Evaluation of left ventricular assist device pump bladders cast from ion-sputtered polytetrafluorethylene mandrels [NASA-CR-167904] N82-23976
SURGERY
  Foreign body extraction from the left pterygopalatine fossa under fluoroscope control A82-31539
  Development of the carbon fibre polysulphone toggle for ligament repair operations [CSIR-ME-1709] N82-22881
SURVIVAL
  The survival of dogs irradiated with lethal doses of gamma radiation under conditions of chemical radioprotection and subsequent therapy A82-30033
SWEAT
  Heat-activated sweat gland densities detected through macrophotography in lean and obese men exposed to a warm, humid environment N82-22876
SYMPATHETIC NERVOUS SYSTEM
  Mechanism for the change in pulmonary blood volume upon the stimulation of the vagosympathetic trunk A82-29698
SYSTEMS ANALYSIS
  The role of biotechnology in the development of technical systems: A reference background [FOA-C-56026-H2] N82-22874
SYSTOLE
  The relationship between circadian and circasian rhythms of some parameters of the heart contractile function and vascular tension A82-29807

T

TARGET RECOGNITION
  Recognition of vehicle targets from the air: A field test [FOA-C-56027-H2] N82-22889
TASK COMPLEXITY
  Performance effects of noise intensity, psychological set, and task type and complexity A82-31389
  Personalised task representation: Developments --- knowledge representation language [ASTE(M)-TM-81104] N82-22885
TASTE
  Electrometric studies of the human gustatory analyzer in healthy persons and in the simulation of weightlessness A82-31538
TELEVISION CAMERAS
  Anthropometric data error detecting and correction with a computer N82-23115
TEMPERATURE CONTROL
  A statistical model of the controller functions of the human temperature regulating system N82-23972
TEMPERATURE EFFECTS
  Effects of whole and partial body exposure to dry heat on certain performance measures [AD-A100305] N82-22880
TEMPORAL DISTRIBUTION
  Evidence for transient luminance and quasi-sustained color mechanisms --- in human vision A82-30871
  An approach to the determination of the reflex reactions of cardiac rhythm A82-31162
THERAPY
  Ways to improve therapeutic and prophylactic assistance to water-transport workers A82-31516
THERMAL INSULATION
  Thermal insulation and shivering threshold in Greek sponge divers A82-29555
THERMAL SHOCK
  Thermal shock and gene operation A82-30302
THERMAL STABILITY
  Principles of enzyme stabilization - Polyacrylamide-gel-immobilized trypsin and chymotrypsin with high catalytic activity at elevated temperatures A82-29486
THERMOMETERS
  Safe wearing times for impermeable chemical protective clothing [ISP-1980-11] N82-23986
THERMOREGULATION
  Adaptive changes in cats after long-term exposure to various temperatures A82-29563

Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569

Under the hot sun --- human heat acclimatization in deserts
A82-30303

**THREE DIMENSIONAL MOTION**
The inverse dynamics of three-dimensional humanoid motion
[CSIR-SWISK-20] N82-22087

**THRESHOLDS (PERCEPTION)**
Perception of suprathreshold stimuli during saccadic eye movement
A82-30870

Evidence for transient luminance and quasi-sustained color mechanisms --- in human vision
A82-30871

Contour curvature analysis - Hyperacuities in the discrimination of detailed shape --- human performance efficiency
A82-30872

Visual depth sensitivities of various cues for depth perception
A82-31447

Electrometric studies of the human gustatory analyzer in healthy persons and in the simulation of weightlessness
A82-31538

**THYROID GLAND**
Adaptation of skeletal and cardiac muscle to elevated motor activity in hypo- and athyreotic rats
A82-31527

**TIME FUNCTIONS**
Effects of whole and partial body exposure to dry heat on certain performance measures
[AD-A100305] N82-22880

**TIME RESPONSE**
Features of the temporal organization of the activated phase of sleep in frogs and turtles
A82-31522

**TISSUES (BIOLOGY)**
The biological and therapeutic effect of microwaves
A82-31506

**TORSIONAL STRESS**
Analysis of vertebral stress distributions and ejection-related injury mechanisms
[AD-A098639] N82-22879

Anthropometric program analysis of reach and body movement
N82-23124

**TRAINING EVALUATION**
An evaluation of the Nimrod Maritime Crew Trainer - A case study
A82-29255

The role of information feedback in aircrew training and its impact on the debriefing facilities
A82-29257

Dimensionality of measured achievement over time
[AD-A110955] N82-23981

**TRANSFER OF TRAINING**
Conducting studies of transfer of learning: A practical guide
[AD-A110569] N82-23980

**TRANSFUSION**
The organization of blood transfusions and blood substitutes on board ships at sea
A82-30029

**TROPICAL REGIONS**
Some indicators of human adaptation to humid tropical conditions
A82-31495

**TRYPSIN**
Principles of enzyme stabilization - Polyacrylamide-gel-immobilized trypsin and chymotrypsin with high catalytic activity at elevated temperatures
A82-29486

## U

**U.S.S.R.**
A contribution to the history of Russian and Soviet aviation psychology: Documents and materials --- Russian book
A82-30875

Ways to improve therapeutic and prophylactic assistance to water-transport workers
A82-31516

**ULCERS**
Perforated gastric and duodenal ulcers in servicemen
A82-30031

**ULTRASONIC RADIATION**
Effects of high-frequency ultrasound on adaptive changes in cell resistance
A82-31546

**UTERUS**
Cervix-to-rectum measuring device in a radiation applicator for use in the treatment of cervical cancer
[NASA-CASE-GSC-12081-2] N82-22875

## V

**VASCULAR SYSTEM**
Functional diagrams of flow and volume for the dog's lung
A82-29567

**VASOCONSTRICTOR DRUGS**
Hemodynamic responses to methoxamine in exercise-conditioned and aorta-constricted rats
A82-29562

**VASODILATION**
Mechanism for the change in pulmonary blood volume upon the stimulation of the vagosympathetic trunk
A82-29690

**VEGETATION GROWTH**
The use of a phytochrome-dependent reaction to assess the influence of space flight factors on a plant organism
A82-31547

**VENTILATION**
No effect of naloxone on hypoxia-induced ventilatory depression in adults
A82-29566

**VERTEBRAE**
Preliminary study of the effects of prolonged acceleration on spinal dynamics of baboons. 1: Acceleration. 2: Biomechanical analysis
[AD-A101766] N82-22871

Analysis of vertebral stress distributions and ejection-related injury mechanisms
[AD-A098639] N82-22879

**VERTIGO**
Fuselage lights as a cause factor of vertigo in night formation flight - Perceiving pattern of fuselage light
A82-28925

**VESTIBULAR NYSTAGMUS**
The effect of convergence on the vestibulo-ocular reflex and implications for perceived movement
A82-30873

**VESTIBULAR TESTS**
Investigation of the sensitivity of the vestibular apparatus to galvanic-current stimulation
A82-31541

**VISUAL ACUITY**
Contour curvature analysis - Hyperacuities in the discrimination of detailed shape --- human performance efficiency
A82-30872

**VISUAL DISCRIMINATION**
Contour curvature analysis - Hyperacuities in the discrimination of detailed shape --- human performance efficiency
A82-30872

Contrast sensitivity at high velocities --- measurement of visual sensitivity to rapidly moving stimuli
A82-30874

**VISUAL PERCEPTION**
Perception of suprathreshold stimuli during saccadic eye movement
A82-30870

Evidence for transient luminance and quasi-sustained color mechanisms --- in human vision
A82-30871

Evaluation of object size upon viewing through an aperture
A82-31163

Color fusion under conditions of equal brightness
A82-31164

VISUAL STIMULI
Perception of suprathreshold stimuli during saccadic eye movement
A82-30870
Contour curvature analysis - Hyperacuities in the discrimination of detailed shape --- human performance efficiency
A82-30872
The effect of convergence on the vestibulo-ocular reflex and implications for perceived movement
A82-30873
Contrast sensitivity at high velocities --- measurement of visual sensitivity to rapidly moving stimuli
A82-30874
Adaptation in motion perception - Alteration of motion evoked by ocular pursuit
A82-31412
Visual depth sensitivities of various cues for depth perception
A82-31447

VISUAL TASKS
Evaluation of human operator reliability according to physiological data
A82-31155

VOCAL CORDS
Quantitative evaluation of hoarseness using a computer
A82-31540

VOICE
Quantitative evaluation of hoarseness using a computer
A82-31540

W

WATER CONSUMPTION
Effects of reduced motor activity and water regimen on the growth of animals and their skeletal musculature
A82-29440

WATER FLOW
Competition between algae in a flow system
A82-31517

WEIGHTLESSNESS
For a prolonged stay in space
A82-30298
Cardiovascular adaptations in weightlessness: The influence of in-flight exercise programs on the cardiovascular adjustments during weightlessness and upon returning to Earth
N82-23110

WEIGHTLESSNESS SIMULATION
Changes of cardiac activity and regional cerebral circulation under gravitational effects simulated by antiorthostasis
A82-31513
Electrometric studies of the human gustatory analyzer in healthy persons and in the simulation of weightlessness
A82-31536
Microgravity as an additional tool for research in human physiology: Simulation on ground; exposure to weightlessness; development of multi-user facilities
[ESA-BR-09] N82-22883

WORK CAPACITY
The functional reserves of athletes
A82-31504

WORK-REST CYCLE
Behavioral study of ultradian activity periods of mice enclosed in experimental cages of different dimensions
[NASA-TM-76848] N82-22870

Y

YEAST
New data on reverse electron transport in the respiratory chains of yeast mitochondria - The induction of reverse transport by exogenous NAD-H
A82-29445

[illegible]

U

[illegible]

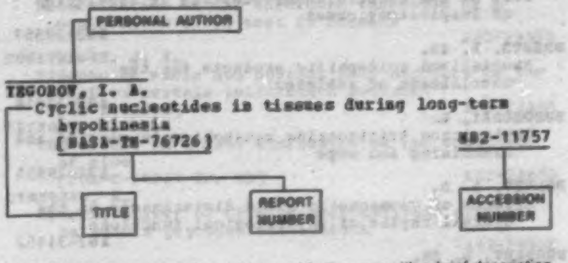
W

[illegible]

# PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY/*A Continuing Bibliography (Suppl. 235)* AUGUST 1982

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ADAIR, E. R.**
Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569

**ADAIR, T. H.**
Functional diagrams of flow and volume for the dog's lung
A82-29567

**ADAMS, B. W.**
Adjustments in metabolic heat production by squirrel monkeys exposed to microwaves
A82-29569

**AGADZHANIAN, N. A.**
Circadian rhythm dynamics under conditions of an altered gaseous medium and hypokinesia
A82-31151

**AHMED, S. M.**
Experimental study of high density foods for the Space Operations Center
N82-23109

**AKHREM, A. A.**
Theoretical conformational analysis of the neuropeptide inducing delta sleep
A82-31531

**ALEKSEEV, V. V.**
Competition between algae in a flow system
A82-31517

**ALESHKO-OZHEVSKII, IU. P.**
Specialized acidophilic products for the nourishment of athletes
A82-31514

**ALEV, K. P.**
Adaptation of skeletal and cardiac muscle to elevated motor activity in hypo- and athyreotic rats
A82-31527

**ALFEROVA, T. V.**
Age characteristics of fatigue during local muscular work in humans
A82-31487

**ALLAKHVERDIEV, S. I.**
Effects of reversible manganese extraction on the light reactions of photosystem II preparations

Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 236)

**A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in August 1982 in**

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA)*

NASA Scientific and Technical Information Branch 1982
**National Aeronautics and Space Administration**
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 207 reports, articles and other documents announced during August 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes – subject and personal author – are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts.* Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

**A82-11697 #** **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti).** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

SEPTEMBER 1982

## IAA ENTRIES

**A82-31830** **The effects of social isolation on human functioning (Wplyw izolacji spolecznej na funkcjonowanie czlowieka).** J. Terelak and K. Kwarecki (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 14, no. 1-2, 1981, p. 57-68. 21 refs. In Polish.

Studies relating to the effects of social isolation on the psychological, physiological and psychophysiological functioning of man are reviewed in light of the importance of such studies for space psychology. The relation between social isolation and sensory deprivation is discussed, and the importance of sensory stimulation to human functioning is pointed out. Problems arising from social isolation in polar stations are then examined, and means for improving adaptation to isolation are considered. Finally, empirical data and the concept of individual temperament are used to develop a mechanism for the effects of social isolation. A.L.W.

**A82-31831** **Central nervous system reactivity in the image of the visual evoked potential and the perceptual-motor performance of pilots and cosmonaut candidates under conditions of sleep deprivation (Reaktywnosc osrodkowego ukladu nerwowego w obrazie wzrokowego potencjalu wywolanego wpw a sprawnosc percepcyjno-motoryczna pilotow i kandydatow na kosmonautow w warunkach deprywacji snu).** W. Zuzewicz and J. Maciejczyk (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 14, no. 1-2, 1981, p. 69-85. 28 refs. In Polish.

The effects of sleep deprivation on the visual evoked potential and psychomotor and perceptual performance are studied in pilots deprived of sleep for 52 hours. Electroencephalograph recordings show sleep deprivation to be accompanied by increase in the amplitude of the components of the evoked potential, as well as increases in latency time and in the duration of the late components. Sleep deprivation is also found to decrease visual-motor coordination, although it improves short-term attention. A correlation is found between visual evoked potential parameters on the one hand and visual-motor coordination and attention on the other under conditions of rest, however after sleep deprivation the dependence only involves attention. A.L.W.

**A82-31832** **Hemodynamic response during combined tilt table-isometric exercise test and +Gz acceleration tolerance.** W. Kowalski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 14, no. 1-2, 1981, p. 87-95. 11 refs.

The use of isometric exercises in combination with the tilt-table test as a predictor of human acceleration tolerances is investigated. Threshold acceleration tolerances were determined on a human centrifuge for 20 healthy pilots aged 21-23 years, and compared with measurements of heart rate and blood pressure performed during a tilt-table test in which subjects performed 50% maximal force static hand-grip exercise in the last 2 min of the 10 min rest period in the horizontal position prior to tilting. Pre-tilt heart rates are found to be lower and blood pressures higher in those subjects showing an above-average acceleration tolerance than in those with below-average tolerance. Isometric exercise during the tilt-table test evokes significant hemodynamic responses, including increases in heart rate, blood pressure and the pressure-time index, which are significantly more pronounced in subjects with lower acceleration tolerances. A.L.W.

**A82-31837** **Problems of human biology in Polish polar research.** K. Kwarecki and J. Terelak (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 14, no. 3, 1981, p. 35-49. 13 refs.

Various aspects of the biomedical part of the Polish polar research program are reviewed. Attention is given to selected physiological functions of human beings in regard to location and duration of stay in polar conditions; basic human biorhythms; psychosocial phenomena during isolation, health standards and criteria for the recruitment of candidates; and rules of prophylactic and medical treatment. B.J.

**A82-32001** **An analysis of the risk of human cardiac damage during +Gz stress - A review.** M. H. Laughlin (Oral Roberts University, Tulsa, OK). *Aviation, Space, and Environmental Medicine,* vol. 53, May 1982, p. 423-431. 96 refs.

Minor cardiac damage represented by subendocardial hemorrhage, myofibrillar degeneration and myocardial necrosis has been observed in miniature swine following acute +Gz exposure. The present paper reviews the available information on the pathogenesis, cumulative nature and clinical manifestations of such effects in order to evaluate the risk of such cardiac pathology in humans. The evidence is shown to suggest that the G-related hemorrhage is connected with sympathetic nervous and hormonal catecholamine effects on the heart, and the cardiomyopathy is not indicative of an ischemic or hypoxic pathogenesis. Chronic exposure studies indicate that the G-related cardiopathies may be more related to psychic than to acceleration stresses. Finally, the large amount of clinical cardiologic and histopathological data acquired for humans exposed to various levels of +Gz stress for about 40 years fails to indicate any cardiac damage as a result of +Gz exposure. It is thus concluded that +Gz exposure poses no significant risk for cardiac damage in humans. A.L.W.

**A82-32002** **Acceleration-induced atrioventricular dissociation - Hemodynamic consequences.** J. E. Whinnery (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space and Environmental Medicine,* vol. 53, May 1982, p. 432-434. 13 refs.

At rest, compensatory mechanisms are able to make up for the loss of a properly timed atrial systole. At maximal stress or in a severely compromised patient, however, proper atrial function may be crucial for maintaining optimum cardiac output. A case of an apparently healthy male subject who developed A-V dissociation during +Gz stress and subsequently could not maintain vision at the higher (+7 Gz) levels is reported. Anatomic, geometric, and physiologic considerations suggest that the loss of atrial function is probably associated with the loss of roughly 30 torr in arterial pressure during high +Gz stress. Since the subject was an avid jogger, the etiology of the A-V dissociation was considered to be due to physiologically enhanced vagal tone. This case, therefore, suggests that special attention should be given to the physical fitness programs designed for individuals in a unique profession, such as piloting single-seat high-performance fighter aircraft. (Author)

**A82-32003** **Human tracking performance changes during combined +Gz and + or - Gy stress.** J. W. Frazier, D. W. Repperger, D. N. Toth, and V. D. Skowronski (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). *Aviation, Space* *and Environmental Medicine,* vol. 53, May 1982, p. 435-439. 9 refs.

An experiment has been conducted on the centrifuge to examine roll-axis tracking performance in both static and stress environments. The stress environments were +5 Gz for 95 sec and combined +5 Gz/+ or - 1 or + or - 2 Gy for 95 sec. Compared to the static condition, performance decrements of 19% were measured at +5 Gz, 45% at combined +5 Gz/+ or - 1 Gy, and 70% at combined +5 Gz/+ or - 2 Gy. Heart rate increases were noted during the stress environments but no significant heart rate differences were noted between the +5 Gz and the combined +5 Gz/+ or - 2 Gy conditions. The conventional lap belt and shoulder harness restraint system, while not optimum, was adequate for these G environments. (Author)

**A82-32004** **Mechanism of vertebral fracture in the F/FB-111 ejection experience.** B. F. Hearon, H. A. Thomas, and J. H. Raddin, Jr. (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). *Aviation, Space and Environmental Medicine,* vol. 53, May 1982, p. 440-448. 29 refs.

A review of the accident investigation reports of all non-fatal F/FB-111 ejections which occurred from 19 October 1967 to 26 March 1980 was conducted. The available spinal radiographs of the ejectees were also reviewed. The overall rate of vertebral compression fractures among the survived ejectees in a properly functioning module is 29.5% (23 of 78). The general mechanism of vertebral injury is a combined mechanism involving both axial compression and flexion. There is no evidence to indicate a hyperextension injury mechanism during retraction, nor is there evidence to support the presumed efficacy of the crossed-arms bracing procedure recommended for landing impact in modifying the vertebral injury rate. It appears that a significant reduction in the rate of vertebral fractures among F/FB-111 ejectees will require decreasing the acceleration stresses imposed on the crewmembers during landing impact. (Author)

**A82-32005 *** **Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task.** W. B. Toscano (California, University, San Francisco, CA) and P. S. Cowings (NASA, Ames Research Center, Moffett Field, CA). *Aviation, Space and Environmental Medicine,* vol. 53, May 1982, p. 449-453. 11 refs. Grant No. NCA2-OR-665-810.

Eighteen men were randomly assigned to three groups matched for susceptibility to Coriolis motion sickness. All subjects were given six Coriolis Sickness Susceptibility Index (CSSI) tests separated by 5-d intervals. Treatment Group I subjects were taught to control their own autonomic responses before the third, fourth, and fifth CSSI tests (6 h total training). Group II subjects were given 'sham' training in an alternative cognitive task under conditions otherwise identical to those of Group I. Group III subjects received no treatment. Results showed that Group I subjects could withstand the stress of Coriolis acceleration significantly longer after training. Neither of the other two groups changed significantly. (Author)

**A82-32006** **Discomfort judgments of translational and angular whole-body vibrations.** R. W. Shoenberger (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). *Aviation, Space, and Environmental Medicine,* vol. 53, May 1982, p. 454-457. 6 refs. Contract No. F33615-79-C-0509.

In a previous series of experiments (Shoenberger, 1980) the subjective intensities of translational (Z-axis) and angular (roll, pitch, and yaw) vibrations were compared, using a psychophysical matching technique. To test the validity and generality of the matching results, an independent set of similar data was obtained in the present experiment, using the method of category production. Seated subjects set levels of translational vibrations, in the X-, Y-, and Z-axes, and angular vibrations, in roll and pitch, that they judged to be 'uncomfortable' on a scale of vibration discomfort. Frequencies of 2.5, 3.15, 4.0, 5.0, 6.3, and 8.0 Hz were presented in each vibration direction. As frequency increased the mean acceleration judged to be uncomfortable increased for Y-axis and roll vibrations, decreased for Z-axis vibrations, and was essentially constant for X-axis and pitch vibrations. The Y- and Z-axis results correspond well to equal intensity contours in existing vibration exposure criteria, and the roll results show good agreement with data from the roll matching experiment. The X-axis and pitch results are similar to the results from the pitch matching experiment and indicate the importance of the backrest in determining the effects of X-axis translational vibrations and angular vibrations in pitch. (Author)

**A82-32008** **Effect of different runway sizes on pilot performance during simulated night landing approaches.** H. W. Mertens and M. F. Lewis (FAA, Civil Aeromedical Institute, Oklahoma City, OK). *Aviation, Space, and Environmental Medicine,* vol. 53, May 1982, p. 463-471. 26 refs.

Visual illusions have been implicated as causal factors in a large number of aircraft accidents during night visual landing approaches. The present study was conducted to quantify the illusions produced by runways of unfamiliar lengths and widths in simulated night approaches. An aircraft simulator with a computer-generated visual display of the runway in a nighttime black hole situation scene was used to measure pilot performance during approaches to runways of constant length but widths varying from 75 to 300 ft following practice at a fixed runway width, and approaches to runways of length varying from 3000 to 9000 ft and widths varying from 100 to 300 ft. Training on a wide runway is found to lower approach angle in approaches to narrow runways, while a narrow practice runway raised approach angles to wider runways; the magnitude of these effects increased as distance from runway threshold decreased. Approach angle in general is observed to decrease as runway width decreased and as length increased. Prior information about runway size had no effect on the responses. A.L.W.

**A82-32009** **Women at altitude - Cardiovascular responses to hypoxia.** B. L. Drinkwater, P. O. Kramar, J. F. Bedi, and L. J. Folinsbee (Washington, University, Seattle, WA). *Aviation, Space and Environmental Medicine,* vol. 53, May 1982, p. 472-477. 30 refs. Research supported by the National Geographic Society.

Six women mountaineers, 23-43 years of age, participated in a series of physiological tests prior to and during an expedition to Bhrigupanth (6798 m) in the Indian Himalayas. During a three-phase step test at sea level, carrying 0, 4.5, and 9.0 kg backpack weights, oxygen requirements represented 49.5-54.8% VO2 max. Recovery heart rates (HR) at 5-15 s were linearly related to exercise HR. At 4250 m, 5-15 s postexercise HR's were significantly higher than those at SL but returned to SL values after 3 min of rest. At 5000 m, HR's remained higher than those at SL throughout recovery. On returning to 4250 m after 3 weeks at higher altitudes, all postexercise HR's were back to SL values. Supine HR's, higher at altitude than at SL during the ascent, returned to SL rates on return to 4250 m. Hemoglobin and hematocrit increased from 13.7 mg% and 42.4% at SL to 16.4 mg% and 52.6% after the climb. Resting blood pressure was significantly elevated at 4250 m during ascent but returned to SL values on the descent. During the cold pressor test, systolic pressure was unaffected by altitude; diastolic pressure increased less at altitude. While HR was unchanged at SL, a significant increase in HR was observed in postclimb CPT tests, even though perceived discomfort decreased. (Author)

**A82-32010** **Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts.** G. Santucci, J. P. Menu, and C. Valot (Centre d'Etudes et de Recherches de Médecine Aérospatiale, Paris, France). *Aviation, Space and Environmental Medicine,* vol. 53, May 1982, p. 478-484. 13 refs. Translation.

Three experiments were conducted on 90 flying personnel to determine the role of luminance, hue, and saturation contrasts on angular visual acuity measured on a CRT system. A Snellen E test object was displayed under various visual acuity conditions on a TV screen, in color contrast, using red, yellow, green, cyan, blue, purple, white, and black. The response system gives response times and quality. The three photocolorimetric parameters are classified through data processing. All other things being equal, the best visual acuity is obtained under a luminance contrast. The first group (red, blue, purple) is better perceived than the second (green, cyan, yellow, white) whatever the other color in simultaneous contrast may be. Higher saturation enhances visual acuity. A curve of mean response times vs. test object sizes is established for the various color couples. The obtained results are of interest for aerospace ergonomics. (Author)

**A82-32011** **Sex differences in cardiac responses to successive apnea periods.** P. Sebert, J. Sanchez, and H. Monod (CNRS, Laboratoire du Physiologie du Travail, Paris, France). *Aviation, Space and Environmental Medicine*, vol. 53, May 1982, p. 485-488. 15 refs.

Cardiac response to breath-holding is generally described as a bradycardia, which is explained by a two-fold mechanism involving the pulmonary mechanoreceptors and the arterial chemoreceptors. This study was conducted to determine the cardiac effects of five successive apnea periods separated by 1 min of free ventilation (FV). Heart rate (HR) and ventilation were measured during this protocol in 12 young subjects (six men, six women). Ventilatory responses during FV periods were similar in both sexes, but HR responses were different during the apnea periods. The men exhibited a bradycardia and the women a tachycardia. Although the statistical significance of the results was weak, they showed a clear tendency which was interpreted as differences in central cardioventilatory interactions. A sex difference in the cardiac consequences of static work from respiratory muscles is also evoked. (Author)

**A82-32012** **The pathophysiology, presentation, and triage of altitude-related decompression sickness associated with hypobaric chamber operation.** D. C. Arthur and R. A. Margulies (U.S. Navy, Naval Submarine Medical Research Laboratory, Groton, CT). *Aviation, Space and Environmental Medicine*, vol. 53, May 1982, p. 489-494. 59 refs.

Decompression sickness following excursions to low atmospheric pressures has recently been a topic of confusion and concern. This article provides a reference for management of decompression sickness occuring after exposure to a reduction in ambient pressure in a hypobaric chamber. The pathophysiology, recognition, classification, initial management, definitive treatment, and eventual disposition of these cases are presented in a form which is applicable to all flight surgeons and flight physiologists, especially those with responsibility for utilization of hypobaric chambers. (Author)

**A82-32013** **The aerospace screening electroencephalogram - An analysis of benefits and costs in the U.S. Air Force.** W. D. Everett and S. W. Jenkins (USAF, School of Aerospace Medicine, Brooks AFB, TX). *Aviation, Space and Environmental Medicine*, vol. 53, May 1982, p. 495-501. 18 refs.

Using the techniques of decision analysis, three possible EEG screening strategies for U.S. Air Force pilots are evaluated. Available clinical and epidemiological data are organized so that the relative merits of the three strategies can be assessed by decision makers. The optimal strategy is found to be screening fighter pilot candidates only. Screening all pilot candidates is less 'cost-effective' and using the EEG as a routine screening test in evaluating combat-qualified pilots for nonneurological conditions is the least effective strategy. Needs for further research and unanswered questions are discussed. (Author)

**A82-32075** **Brain mechanisms of visual attention.** R. H. Wurtz, M. E. Goldberg, and D. L. Robinson (National Institutes of Health, National Eye Institute, Bethesda, MD). *Scientific American*, vol. 246, June 1982, p. 124-130, 132, 134, 135.

Neural activity corresponding to the process of the selection of important objects in the visual world has been investigated in experiments with monkeys. By the recording of action potentials in individual brain cells of monkeys trained to fixate on a spot of light, it has been possible to map the receptive fields of individual brain cells and to observe enhancements in the firing rates of cells associated with a region of the visual field toward which a subsequent saccade is directed. For cells in the superior colliculus and frontal eye field, this enhanced response requires a visual stimulus and is spatially selective but comes only as the precursor of a saccade to the corresponding area. In cells of the straite cortex, increases in firing rate are not spatially selective. Only cells in the posterior parietal cortex exhibit a spatially selective enhanced response associated with attention to visual fields in the absence of eye movements. Results thus suggest a neural mechanism of visual attention signalled by enhanced activity in the posterior parietal cortex. A.L.W.

**A82-32154** **Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g.** W. Briegleb, J. Neubert, A. Schatz, J. R. Hordinsky (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Bonn, West Germany), and A. Cogoli (Zürich, Eidgenössische Technische Hochschule, Zurich, Switzerland). *Acta Astronautica*, vol. 9, Jan. 1982, p. 47-50. 17 refs.

Primary cell reaction under conditions of weightlessness are considered. It is found that two different types of reactions occur. One involves a category of more or less irreversible malfunctions, while the second is related to changed intracellular behavior without immediate consequences for the cell's overall functioning. A description is presented of a number of experiments, taking into account genetic reactions, ontogenetic reactions in early development, effects of spatial orientation, periodic protoplasmic movement, and an activation of lymphocytes. On the basis of observations and calculations, it is found that essential innercell structures are stressed by gravity. Cells compensate these effects by using cybernation. G.R.

**A82-32210 *** **Distribution and enantiomeric composition of amino acids in the Murchison meteorite.** M. H. Engel and B. Nagy (Arizona, University, Tucson, AZ). *Nature*, vol. 296, Apr. 29, 1982, p. 837-840. 29 refs. Grant No. NGR-03-002-171.

Studies of the amino acid contents and enantiomeric compositions of a single stone from the Murchison meteorite are reported. Water-extracted and 6M HCl-extracted samples from the meteorite interior of meteorite fragments were analyzed by gas chromatography and combined gas chromatography-chemical ionization mass spectrometry. Examination of the D/L ratios of glutamic acid, aspartic acid, proline, leucine and alanine reveals those amino acids extractable by water to be partially racemized, whereas the acid-extracted amino acids were less racemized. The amino acid composition of the stone is similar to those previously reported, including the absence of serine, threonine, tyrosine phenylalanine and methionine and the presence of unusual amino acids including such as isovaline, alpha-aminoisobutyric acid and pseudoleucine. It is concluded that the most likely mechanism accounting for the occurrence of nonracemic amino acid mixtures in the Murchison meteorite is by extraterrestrial stereoselective synthesis or decomposition reactions. A.L.W.

**A82-32213** **Human body clocks and the timing of sleep.** A. T. Winfree (Purdue University; Institute for Natural Philosophy, West Lafayette, IN). *Nature*, vol. 297, May 6, 1982, p. 23-27. 104 refs. Research supported by the Institute for Natural Philosophy, U.S. Air Force, and NSF.

An individual living in a cave for four months without external time reference slept and awoke at progressively longer and longer intervals. Possible bases for this circadian rhythm are discussed, including the workings of the suprachiasmatic nuclei and the associated retinohypothalamic tracts, and the release of melatonin as influenced by natural or artificial light. Sleep rhythms are often abnormal in manic-depressives and people with little social contact. Insomnia is also often due to abnormal rhythms, and in the light of this, effective treatment can be instituted. The effect of daylight savings, jet-lag, and shift work on the rhythm are discussed, and procedures for hastening adaptation to a new schedule are described. C.D.

**A82-32288 #** **Stress testing and coronary artery disease - Study of 140 cases on tread mill.** M. M. Singh (Indian Air Force, Institute of Aviation Medicine, Bangalore, India), K. V. S. Mani (Indian Air Force, New Delhi, India), and S. Krishnamurti (St. John Medical College, Bangalore, India). *Aviation Medicine*, vol. 25, Dec. 1981, p. 25-31. 20 refs.

**A82-32289 #** **A preliminary study on noise induced hearing loss in serving aircrew of Indian Air Force.** K. S. Soodan and B. N. P. Rao (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *Aviation Medicine*, vol. 25, Dec. 1981, p. 32-34. 10 refs.

**A82-32290 #** **A longitudinal analysis of TH Index and identification of period of acute heat stress.** G. Singh and N. Neelakantan (Air Force Academy, Hyderabad, India). *Aviation Medicine*, vol. 25, Dec. 1981, p. 35-37.

Singh (1978) has found that the Temperature Humidity Index (TH index) is a simple and reliable criterion for the evaluation of thermal comfort. The present study is concerned with an analysis of the TH index over three consecutive years, at different periods of the day, to identify periods of heat intolerance as a basis for advanced planning concerning the assignment of flying tasks. It is found that during the period from April 29 to June 2 symptoms of heat intolerance compromising flight safety may occur in persons at the Air Force Academy particularly during the time from 1330 to 1530 hrs. The nomogram for the TH index can be generally accepted for evaluation of the thermal comfort in operational flying in hot humid weather at various bases. G.R.

**A82-32349** # **Biological experiments in space biology and gravitation.** P. Schiller. *Dornier-Post* (English Edition), no. 1, 1982, p. 36-38.

Equipment for use in biological experiments to be performed on board Spacelab is discussed. Among the necessary equipment for space biology experiments are an incubator, which must maintain a constant temperature in the presence of ambient temperatures ranging from 10 to 35 C, contain few moving parts and be compatible with the Spacelab environment and the installation of a centrifuge, and a space centrifuge for the production of an artificial gravity environment to allow the differentiation between the effects of space radiation and weightlessness. An incubator has been developed to meet these requirements using foam insulation, Peltier elements for heating and cooling and heat transport by a thick aluminum plate. Within this incubator may be placed a centrifuge of maximum rotor diameter 220 mm. Typical experiments envisioned for the system include the study of the daily rhythm in algae and the influence of weightlessness on spore formation in bacteria and yeast. In addition, special procedures have been developed for working with liquids under conditions of weightlessness. A.L.W.

**A82-32390** **The effects of hypoxia on serial response time.** B. Fowler, P. L. White (York University, Downsview, Ontario, Canada), G. R. Wright, and K. N. Ackles (Defence and Civil Institute of Environmental Medicine, Downsview, Ontario, Canada). *Ergonomics*, vol. 25, Mar. 1982, p. 189-201. 31 refs.

The effects of hypoxia on choice reaction time and movement time are examined using a visual serial choice reaction time task in which the number of choices and the distance over which a movement has to be made can be varied. Hypoxia is induced with a low percentage oxygen mixture, and blood oxygen saturation is controlled at 64.3%, which is equivalent to 6700 m. It is found that hypoxia increases simple reaction time by decreasing the effective brightness of the stimulus and interfering with some aspect of the information processing system controlling movement time. An examination of individual latency distributions indicates that hypoxia acts to slow performance by shifting the whole distribution. The role of blocking in hypoxia is also investigated by examining the shape of the frequency distributions of response latencies. D.L.G.

**A82-32413** **Perceptual components of computer displays.** R. N. Haber and L. Wilkinson (Illinois, University, Chicago, IL). *IEEE Computer Graphics and Applications*, vol. 2, May 1982, p. 23-26, 28 (5ff.). 41 refs.

Advances in cognitive psychology have revealed the varieties of architecture and operating systems underlying the information processing tasks humans normally perform. Information was obtained regarding a number of principles which specify the optimal organization of information for various types of human information processing. A description is presented of some of these organizational principles, especially those which affect communication between a computer and a user. Since this communication is frequently visual, most of the presented material concerns principles of cognition which apply to graphic information. Attention is given to the structure of cognitive organization, two principles of visual perception, the use of spatial arrangement to represent structure, and the representation of structure with the aid of visual features, movement, three-dimensional objects, and considerations of meaning. G.R.

**A82-32423** * **Velocity and attenuation of sound in arterial tissues.** J. A. Rooney (Maine, University, Orono, ME), P. M. Gammell (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA; Southern California, University, Los Angeles, CA), J. D. Hestenes (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), H. P. Chin, and D. H. Blankenhorn (Southern California, University, Los Angeles, CA). *Acoustical Society of America, Journal*, vol. 71, Feb. 1982, p. 462-466. 15 refs. NASA-supported research; Contract No. NIH-NO1-HV-7-2930.

The velocity of sound in excised human and canine arterial tissues is measured in order to serve as a basis for the development and application of ultrasonic techniques for the diagnosis of atherosclerotic lesions. Measurements of sound velocity at different regions of 11 human and six canine aortas were made by a time delay spectrometer technique at frequencies from 2 to 10 MHz, and compared with ultrasonic attenuation parameters and the results of biochemical assays. Sound velocity is found to increase with increasing attenuation at all frequencies, and with increasing collagen content. A strong dependence of sound velocity on cholesterol content or low calcium contents is not observed, although velocities of up to 2000 m/sec are observed in highly organized calcified lesions. A decrease in velocity with decreasing temperature is also noted. It is thus concluded that it is principally the differences in tissue collagen levels that contribute to image formation according to sound velocity. A.L.W.

**A82-32496** **User response characteristics for sequential displays.** J. R. Ims (Aerospace Corp., Systems Simulation and Analysis Dept., Los Angeles, CA). In: Display technology II; Proceedings of the Meeting, Los Angeles, CA, February 10, 11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 28-34. Contract No. F04701-80-C-0081.

The obscuring of a brief visual target stimulus (TS) by either a subsequent, preceding, or simultaneous visual mask stimulus (MS), has been of particular interest in connection with studies of human visual information processing. When the contours of the MS do not overlap but are contiguous with the contours of the TS, the procedure is called metacontrast. The present investigation is concerned with a metacontrast study to explore the influence of stimulus variation on Type B (or U-shaped) masking functions. The results of two experiments are discussed, taking into account a comparison of shape and location responses. Applications of the considered characteristics can be found on the ground in air traffic control displays and in the airborne, real-time, threat location, head-up displays. G.R.

**A82-32525** **Eye modelling.** I. Overington (British Aerospace Public, Ltd., Co., Dynamics Group, Bristol, England). In: Assessment of imaging systems: Visible and infrared; Proceedings of the Symposium, Reading, England, April 7-9, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 182-190. 45 refs.

Early stages of visual image processing which influence image formation and transformation in the eye/brain system are discussed and various approaches to visual function modeling are examined. Attention is given to models associated with display/observer interface; foveal threshold performance models relating thresholds of performance to quality, size, and noise of the retinal image and to background luminance; and foveal suprathreshold models establishing the apparent image fidelity. Finally, search models, which seek to relate distributed visual performance to the ability to carry out search tasks on displays, are discussed. V.L.

**A82-32529** **Recognition of thermal images - Effects of scan-line density and signal-to-noise ratio.** A. van Meeteren and S. Mangoubi (Centrale Organisatie voor Toegepast-Natuurwetenschappelijk Onderzoek, Instituut voor Zintuigfysiologie TNO, Soesterberg, Netherlands). In: Assessment of imaging systems: Visible and infrared; Proceedings of the Symposium, Reading, England, April 7-9, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 230-236. 14 refs.

A series of recognition experiments have been carried out in which 69 thermograms of military vehicles made in the field were displayed indoors using a flying spot scanner system, and subjects were asked to identify the vehicles out of six alternatives. In each session, all 69 pictures were presented in random order with the same scan-line density and the same amount of electronically added noise. Large differences are found in the recognizability between different vehicles and, in particular, between different views of the same vehicle, with hot spot front views being most difficult. An average identification score of 70% is obtained at about two scan lines per meter (measured over real objects) when no noise is added. It is concluded that scan-line density is of primary importance in

**prediction models and in design considerations whereas the effect of noise is small.** V.L.

**A82-32692** **Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin.** J. A. MacLaughlin, R. R. Anderson, and M. F. Holick (Massachusetts General Hospital, Boston; MIT, Cambridge, MA). *Science*, vol. 216, May 28, 1982, p. 1001-1003. 12 refs. Research supported by Duro-Test Corp.; Grant No. NIH-AM-27334.

**A82-32800** **Deep-sea bacteria - Isolation in the absence of decompression.** H. W. Jannasch, C. O. Wirsen, and C. D. Taylor (Woods Hole Oceanographic Institution, Woods Hole, MA). *Science*, vol. 216, June 18, 1982, p. 1315-1317. 22 refs. NSF Grants No. OCE-77-19766; No. OCE-79-19178.

Sampling and pure culture isolation of deep-sea bacteria without loss of in situ pressure is required in order to determine the viability of decompression-sensitive strains. This was achieved by using a pressure-retaining sterilizable seawater sampling system in connection with a prepressurized hyperbaric isolation chamber. Rates of growth and substrate uptake of the majority of isolates showed highly barotolerant characteristics, while the remainder (4 out of 15) exhibited barophilic characteristics. (Author)

**A82-32826 *** **Effect of limb immobilization on skeletal muscle.** F. W. Booth (Texas, University, Houston, TX). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, May 1982, p. 1113-1118. 48 refs. Grant No. NIH-AM-19393; Contract No. NAS9-15388.

Current knowledge and questions remaining concerning the effects of limb immobilization on skeletal muscle is reviewed. The most dramatic of these effects is muscle atrophy, which has been noted in cases of muscles fixed at or below their resting length. Immobilization is also accompanied by a substantial decrease in motoneuronal discharges, which results in the conversion of slow-twitch muscle to muscle with fast-twitch characteristics. Sarcolemma effects include no change or a decrease in resting membrane potential, the appearance of extrajunctional acetylcholine receptors, and no change in acetylcholinesterase activity. Evidence of changes in motoneuron after hyperpolarization characteristics suggests that the muscle inactivity is responsible for neuronal changes, rather than vice versa. The rate of protein loss from atrophying muscles is determined solely by the first-order rate constant for degradation. Various other biochemical and functional changes have been noted, including decreased insulin responsiveness and protein synthesis. The model of limb immobilization may also be useful for related studies of muscle adaptation. A.L.W.

**A82-32827** **Characteristics of adjustment of lung diffusing capacity to work.** J. T. Fisher and F. J. Cerny (Buffalo, Children's Hospital, Buffalo, NY). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, May 1982, p. 1124-1127. 11 refs.

The kinetic of changes in the pulmonary diffusing capacity (DL) were studied in the initial 90 sec following the onset of exercise after rest, and during the transition from moderate to heavy exercise. Four male subjects performed a series of trials on a braked bicycle ergometer while being monitored for oxygen uptake, DL for CO, breath He concentrations, and DL for CO post-exercise levels. Measurements were performed under submaximal, maximal, and steady state conditions. The DL response to all exercise conditions was determined by a least-squares curve-fitting analysis to fit a first-order exponential equation. Significant increases in the DL were detected in going from the rest-to-work condition as opposed to the transitions to higher work loads. The results indicate a fast-response DL mechanism which is different from a component which operates in changes of steady-state levels of exercise. M.S.K.

**A82-32829** **Thermoregulatory influences on common carotid blood flow in the dog.** M. A. Baker, M. J. Hawkins, and R. D. Rader (California, University, Riverside, CA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, May 1982, p. 1138-1146. 36 refs. NSF Grant No. BNS-79-01006; Grant No. PHS-RR-09070.

The relationship of blood flow through the common carotid artery to respiratory evapqration under different conditions of heat stress in the dog is investigated in light of the importance of the common carotid artery as the sole supplier of blood to areas of evaporative cooling in panting mammals. Measurements of common carotid flow were made by an ultrasonic flow probe under conditions of rest at ambient temperatures between 25 and 50 C, hypothalamic heating, and light and strenuous exercise at ambient temperatures of 25 and 35 C. Determinations of respiratory water loss reveal a striking temporal correspondence between evaporation from the nose and mouth and common carotid blood flow. Carotid blood flow and respiratory evaporation are both observed to increase with increasing temperature and hypothalamic heating. Both rates increase rapidly at the onset of exercise, with peak levels related to the peak rectal temperature reached. Most of the increased flow is deduced to be destined for the evaporative surfaces of the mouth, tongue and nose and is thus related to thermoregulatory activity. A.L.W.

**A82-32830** **Central and peripheral inputs in sweating regulation during thermal transients.** J. P. Libert, V. Candas, J. J. Vogt, and P. Mairiaux (CNRS, Centre d'Etudes Bioclimatiques, Strasbourg, France). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, May 1982, p. 1147-1152. 22 refs.

Eight nude resting men were exposed to consecutive heating-cooling cycles of air and wall temperatures varying from 28 to 45 C in a sawtooth pattern using one of the following slopes: + or - 3.40, 2.27, 1.70, 1.42, or 1.13 C/min. Ambient vapor pressure and air velocity were kept constant at 20.0 mbar and 0.9 m/sec, respectively. Continuous measurements were made of rectal, esophageal, and mean skin temperatures. Local upper limb sweating response was measured from an arm chamber under a local thermal clamp. The results point out the insufficiency of an explanation based on a simple additive function of core and skin temperatures for describing sweating regulation. During transient thermal loads, a multiplicative interaction of mean skin and core temperatures must also be taken into account for describing the central drive for the local sweating response. The interindividual differences observed in the sweating regulation mechanism seem to be linked to a nonlinearity in the response of the thermoregulatory system. (Author)

**A82-32831** **Mechanical properties of rat lung during prolonged hypercapnia.** Y.-L. Lai, W. J. E. Lamm, and J. **A82-32832** **Effects of hyperventilation on pulmonary blood flow and recirculation time of humans.** S. Matalon, N. Dashkoff, M. S. Nesarajah, F. J. Klocke, and L. E. Farhi (New York, State University; Erie County Medical Center, Buffalo, NY). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, May 1982, p. 1161-1166. 23 refs. Grants No. NIH-HL-23190; No. NIH-HL-15194.

Direct invasive techniques were used to measure the effects of hyperventilation on the pulmonary blood flow and on the recirculation time of helium and of carbon dioxide in humans. The subjects hyperventilated with a tidal volume of 1.5 liters (BTPS) and a frequency of 20 or 30 breaths/min. There was no significant change in pulmonary blood flow from control at either level of hyperventilation. Helium first appeared in the pulmonary artery within 12 sec from the onset of hyperventilation and increased by approximately 0.7% of its equilibrium arterial value per second at both levels of hyperventilation. In contrast, the partial pressure of CO2 in mixed venous blood remained at base-line level until 43 sec from the onset of hyperventilation. It is concluded that hyperventilation at 30 or 45 l/min with constant tidal volume does not significantly affect the value of pulmonary blood flow and that the amount of recirculation of the two gases does not result in underestimation of pulmonary blood flow when this variable is measured by indirect respiratory rebreathing techniques. Cafarelli (York University, Toronto, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, May 1982, p. 1181-1185. 29 refs. Natural Sciences and Engineering Research Council of Canada Grant No. 46633.

Exercise-induced blood pH shifts affecting the sensory response and the electromyographic (EMG) activity were examined, as were possible correlations between changes in the EMG and the level of sensory intensity. Six males averaging 24 yr of age performed cycling exercise while being monitored before and after for oxygen uptake volume, heart rate, pH, plasma lactate, and hematocrit, while also being wired for EMG by means of electrodes attached to the vastus lateralis. Acid-base shifts were induced through ingestion of NH4Cl or NaHCO3, and placebos were also administered. Two-factor analysis of variance was performed on all data, and significant F ratios were partitioned with the Newman-Keuls multiple comparison procedure. The data indicated a slight hemodilution in alkalosis, hemoconcentration in acidosis, and hemoconcentration due to exercise alone. Acidosis increased sensory activity during heavy exercise, when plasma lactate was also higher in alkalosis. M.S.K.

**A82-32836 Acute hypervolemia, cardiac performance, and aerobic power during exercise.** I.-L. Kanstrup and B. Ekblom (Karolinska Institutet, Stockholm, Sweden). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, May 1982, p. 1186-1191. 27 refs.

An examination of the effects of plasma volume expansion on aerobic power and cardiac response at different levels of exercise is reported. Fourteen males within 5 years of 27 yr old were examined for heart rate, maximal oxygen uptake, blood lactate concentration, blood and plasma volumes, blood pressure, hematocrit, and cardiac output during maximal and submaximal bicycle exercise. A 6% dextran in solution plasma expansion fluid was fed intravenously into the subjects after the first week of exercise, followed two weeks later by reducing the dextran infusion in eight of the subjects by blood-letting. Blood volume was increased by the infusion, as was the cardiac output, by 7.8 going to 8.7 1/min. It was concluded that acute plasma blood volume expansion produced increased cardiac output and stroke volume at rest and during exercise, increased maximum cardiac output, and the effect was more pronounced during exercise than rest. **A82-32840 Effects of acute cold exposure on muscle amino acid and protein in rats.** O. L. K. Smith, G. Huszar, S. B. Davidson, and E. Davis (John B. Pierce Foundation Laboratory; Yale University, New Haven, CT). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, May 1982, p. 1250-1256. 30 refs. Research supported by the Kingsley Foundation; Grant No. NIH-HD-12183.

The effects of acute cold exposure on muscular amino acid release, protein synthesis and protein breakdown are studied in relation to those changes in protein metabolism brought about by fasting. Blood amino acid concentrations were determined in rats functionally hepatectomized (eviscerated) following exposure to 4 C for 24 h or following fasting, and it was found that while plasma amino nitrogen remained about constant in cold exposure and fasting, evisceration lead to an enhanced rise in total amino acids and alanine, with the increment in alanine greatest in starved rats. The injection of insulin or adrenodemedullation in cold-exposed eviscerated rats suppressed the rise in plasma amino acids, while induced diabetes or epinephrine injection in eviscerated nonexposed rats enhanced the rise in plasma alpha-nitrogen. In intact rats, the urinary secretion of 3-methylhistidine was unaffected by cold. Results suggest that amino acid loss from tissues during acute cold stress is due to sympathetic activity, which depresses plasma insulin to levels impairing protein synthesis, rather than the enhanced breakdown of muscle protein or alanine synthesis. **A82-32841 Effect of aerobic conditioning on cardiovascular response to isometric exercise.** B. J. Morgan, H. L. Brammell, D. L. Sable, M. L. Morton, and L. D. Horwitz (Colorado, University, Denver, CO). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, May 1982, p. 1257-1260. 10 refs. Research supported by Ayerst Laboratories; Grant No. NIH-HL-24400.

Trained and untrained muscle groups were examined to compare the cardiovascular response during isometric handgrip exercise (IHE) and quadriceps exercise (IQE) before and after intensive training employing dynamic leg exercise. Beta-adrenaline blocking during the aerobic portion was also tested for effects on the static exercise. Seventeen males between 21-35 were subjected to treadmill and then isometric exercises, then trained in calisthenics for 3 days/wk for 5 weeks. Placebo or propranolol were given the subjects during the training period. Monitoring comprised the plasma propranolol levels, O2 uptake, blood pressure, and pulse rate. Intake of propranolol was found to cause a lessening of the maximum heart rate in both at-rest and treadmill exercise trials. After training, however, only the placebo-added group displayed diminished heart rate and systolic pressure and an increase in the maximal oxygen uptake volume, although limited to trained muscle groups. M.S.K.

**A82-32842 * Induced venous pooling and cardiorespiratory responses to exercise after bed rest.** V. A. Convertino, H. Sandler, P. Webb, and J. F. Annis (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, CA; Webb Associates, Yellow Springs, OH). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 52, May 1982, p. 1343-1348. 28 refs.

Venous pooling induced by a specially constructed garment is investigated as a possible means for reversing the reduction in maximal oxygen uptake regularly observed following bed rest. Experiments involved a 15-day period of bed rest during which four healthy male subjects, while remaining recumbent in bed, received daily 210-min venous pooling treatments from a reverse gradient garment supplying counterpressure to the torso. Results of exercise testing indicate that while maximal oxygen uptake endurance time and plasma volume were reduced and maximal heart rate increased after bed rest in the control group, those parameters remained essentially unchanged for the group undergoing venous pooling treatment. Results demonstrate the importance of fluid shifts and venous pooling within the cardiovascular system in addition to physical activity to the maintenance of cardiovascular conditioning. A.L.W.

**A82-32843** **A computer linear regression model to determine ventilatory anaerobic threshold.** G. W. Orr, H. J. Green, R. L. Hughson, and G. W. Bennett (Waterloo, University, Waterloo, Ontario, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 52, May 1982, p. 1349-1352. 6 refs. Research supported by the Natural Sciences and Engineering Research Council of Canada and University of Waterloo.

The anaerobic threshold has generally been determined by simple visual inspection of ventilation or other gas-exchange data obtained during incremental exercise. To establish objective criteria for the determination of anaerobic threshold, a computer algorithm has been developed that models the ventilatory response to exercise using multisegment linear regression. The best-fit regression model is chosen by minimizing the pooled residual sum of squares. The anaerobic threshold is reported as the first break point in that model. The computer-determined anaerobic threshold values for 37 subjects were compared with the subjectively determined values as chosen by four independent observers. The observers' estimates, when pooled to yield a single value for each subject, gave a mean value for the gas-exchange anaerobic threshold of 2.26 + or - 0.69 l/min. The estimates by the computer method averaged 2.21 + or - 0.65 l/min. The correlation coefficient for these two methods was 0.94. (Author)

**A82-32879** **Iterative reconstruction-reprojection - An algorithm for limited data cardiac-computer tomography.** M. Nassi, W. R. Brody, B. P. Medoff, and A. Macovski (Stanford University, Stanford, CA). *IEEE Transactions on Biomedical Engineering*, vol. BME-29, May 1982, p. 333-341. 13 refs. Research supported by the American Heart Association and Gran Mariscal de Ayacucho Foundation of Venezuela; Grant No. NIH-1-R01-HL-25905.

Cardiac X-ray computed tomography (CT) has been limited due to scanning times which are considerably longer (greater than 1 sec) than required to resolve the beating heart (less than 0.1 sec). The otherwise attractive convolution-back projection algorithm is not suited for CT image reconstruction from measurements comprising an incomplete set of projection data. In this paper, an iterative reconstruction-reprojection (IRR) algorithm is proposed for limited projection data CT image reconstruction. At each iteration, the missing views are estimated based on reprojection, which is a software substitute for the scanning process. The standard fan-beam convolution-back projection algorithm is then used for image reconstruction. The proposed IRR algorithm enables the use of convolution-back projection in limited angle-of-view and in limited field-of-view CT cases. The potential of this method for cardiac CT reconstruction is demonstrated using computer simulated data. (Author)

The interactions of Ni(II) cation with a representative suite of purine bases and the respective nucleosides and nucleotides have been studied by ultraviolet difference spectroscopy. Apparent association constants were determined for each system at pH 7.0, using computer linear regression coupled with an iteration technique. The specificity of binding of Ni(2+) for the purine nucleotides studied at pH 7.0 was 5-prime-GMP greater than 5-prime-AMP; a similar ordering was also found for the respective nucleosides and bases. In this study binding was not observed for the suite of pyramidines used, although an Ni(2+) -cytidine complex has been observed (Fiskin and Beer, 1965). It was also found that Ni(2+) bound more strongly to the purine 5-prime-nucleotides than to the respective nucleosides and bases. These trends are explained in terms of metal-ligand bonds and available bonding positions on the ligands. A role for metal-ion-nucleotide types of complexes is suggested in the processes that might have given rise to the origin of life. (Author)

**A82-33280 *** **Comets - Chemistry and chemical evolution.** B. Donn (NASA, Goddard Space Flight Center, Laboratory for Extraterrestrial Physics, Greenbelt, MD). *Journal of Molecular Evolution*, vol. 18, May 1, 1982, p. 157-160. 45 refs.

Research on the chemical composition and conditions in comets and their possible role in the origin of life on earth is surveyed. The inorganic and organic compounds and ions indicated in the ultraviolet and visible spectra of comets are noted, and evidence for the existence of at least a small proportion of complex organic molecules in comets is presented. It is then pointed out that while cometary material could have reached the earth and provided volatile elements from which biochemical compounds could have formed, it is unlikely that a cometary nucleus could have withstood the temperatures and pressures necessary to sustain an environment in which life could have originated. **A82-33282** **Organic synthesis from reducing models of the atmosphere of the primitive earth with UV light and electric discharges.** A. R. Bossard, F. Raulin, D. Mourey, and G. Toupance (Paris XII, Université, Créteil, Val-de-Marne, France). *Journal of Molecular Evolution*, vol. 18, May 1, 1982, p. 173-178. 34 refs. Research supported by the Centre National d'Etudes Spatiales.

The organic syntheses obtained in experiments with a reducing model of the primitive earth atmosphere where energy is supplied by UV light and electrical discharges are compared. A review of the results of experiments conducted with far-UV radiation and corona discharges in gaseous mixtures of methane with varying amounts of nitrogen, ammonia and water vapor indicates UV light to favor the production of saturated over unsaturated carbon chains, while electrical discharges are efficient producers of unsaturated carbon chains. In experiments with $CH_4$-$NH_3$ and $CH_4$-$N_2$ mixtures, UV radiation leads to the formation of HCN, $CH_3CN$ and $C_2H_5CN$, whereas electric discharges can produce nitriles in $CH_4$-$N_2$ mixtures. Finally, it has been noted that only limited quantities of oxygen-containing organics are synthesized in $CH_4$-$H_2O$ mixtures using either UV light or electric discharges. It is thus concluded that, despite their relative scarceness, electric discharges played the major role in the synthesis of atmospheric precursors of biomonomers. A.L.W.

**A82-33283 *** **Interaction between ATP, metal ions, glycine, and several minerals.** J. Rishpon, P. J. O'Hara, J. G. Lawless (NASA, Ames Research Center, Moffett Field, CA), and N. Lahav. *Journal of*

*Molecular Evolution,* vol. 18, May 1, 1982, p. 179-184. 21 refs.

Interactions between ATP, glycine and montmorillonite and kaolinite clay minerals in the presence of various metal cations are investigated. The adsorption of adenine nucleotides on clays and Al(OH)3 was measured as a function of pH, and glycine condensation was followed in the presence of ATP, ZnCl2, MgCl2 and either kaolinite or montmorillonite. The amounts of ATP and ADP adsorbed are found to decrease with increasing Ph, and to be considerably enhanced in experiments with Mg(2+)- and Zn(2+)-montmorillonite with respect to Na(+)-montmorillonite. The effects of divalent cations are less marked in kaolinite. Results for Al(OH)3 show the importance of adsorption at clay platelet edges at high pH. The decomposition of ATP during drying at high temperature is observed to be inhibited by small amounts of clay, vacuum, or Mg(2+) or Zn(2+) ions, and to be accompanied by peptide formation in the presence of glycine. Results suggest the importance of Zn(2+) and Mg(2+) in chemical evolution. A.L.W.

**A82-33284 * Oligonucleotide formation catalyzed by mononucleotide matrices.** R. Lohrmann (Salk Institute for Biological Studies, San Diego, CA). *Journal of Molecular Evolution,* vol. 18, May 1, 1982, p. 185-195. 16 refs. Grants No. NGR-05-067-001; No. NIH-GM-13435.

Pb(2+)-containing precipitates of mononucleotides form matrices which catalyze the self-condensation of nucleotide 5-prime-phosphorimidazolides and their condensation with nucleosides. The reactions exhibit base-pairing specificity between matrix nucleotide and substrate, and usually follow the Watson-Crick pairing rules. Although purine polynucleotides do not facilitate the oligomerization of pyrimidine nucleotide monomers in solution, it is interesting that purine-containing matrices do catalyze such a reaction. The significance of the results in the context of the prebiotic evolution of polynucleotides is discussed. (Author)

**A82-33285 * Synthesis of phosphatidylcholine under possible primitive earth conditions.** M. Rao, J. Eichberg, and J. Oro (Houston, University, Houston, TX). *Journal of Molecular Evolution,* vol. 18, May 1, 1982, p. 196-202. 33 refs. Research supported by the Robert A. Welch Foundation; Grants No. NGR-44-004-002; No. NIH-NS-12493-04.

Using a primitive earth evaporating pond model, the synthesis of phosphatidylcholine was accomplished when a reaction mixture of choline chloride and disodium phosphatidate, in the presence of cyanamide and traces of acid, was evaporated and heated at temperatures ranging from 25 to 100 C for 7 hours. Optimum yields of about 15% were obtained at 80 C. Phosphatidylcholine was identified by chromatographic, chemical and enzymatic degradation methods. On enzymatic hydrolysis with phospholipase A2 and phospholipase C, lysophosphatidylcholine and phosphorylcholine were formed, respectively. Alkaline hydrolysis gave glycerophosphorylcholine. The synthesis of phosphatidylcholine as the major compound was accompanied by the formation of lysophosphatidylcholine in smaller amounts. Cyanamide was found to be essential for the formation of phosphatidylcholine, and only traces of HCl, of the order of that required to convert the disodium phosphatidate to free phosphatidic acid were found necessary for the synthesis. This work suggests that phosphatidylcholine, which is an essential component of most biological membranes, could have been synthesized on the primitive earth. (Author)

**A82-33286 Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions.** D. W. Deamer and G. L. Barchfeld (California, University, Davis, CA). *Journal of Molecular Evolution,* vol. 18, May 1, 1982, p. 203-206. 9 refs.

Phospholipid vesicles (liposomes) were subjected to dehydration-hydration cycles in the presence of 6-carboxyfluorescein or salmon sperm DNA. It was found that the vesicles fused into multilamellar structures during dehydration with solutes trapped between the lamellae. Upon rehydration the lamellae swelled and formed large vesicular structures containing solute. This model can be used to study encapsulation of macromolecules by lipid membranes to form protocellular structures under prebiotic conditions. (Author)

**A82-33287 * A theory for the origin of a self-replicating chemical system. II - Computer simulation of the autogen.** D. H. White and M. S. Raab (Santa Clara, University, Santa Clara, CA). *Journal of Molecular Evolution,* vol. 18, May 1, 1982, p. 207-216. 14 refs. Grants No. NCA2-OR-685-702; No. NCA2-OR-685-806.

In order to better understand the feasibility and limitations of the autogen (White 1980), a computer simulation based on the fluctuating clay environment was used to test whether autocatalytic growth would occur under various conditions. The results suggest that overall accuracies of replication and translation in the range of 90% and 10%, and protoenzyme turnover numbers of 10-120 monomers/protoenzyme/day are adequate for exponential growth. Nucleation of the components of the autogen from random background oligomers would be extremely rapid if oligomers lengths 2-6 were adequately functional, whereas oligomer lengths much greater than 10 are prohibited. The autogen would most likely nucleate and grow to dominance either rapidly (10-100 cycles of roughly 1 day each) or not at all. (Author)

**A82-33288 * Pyrolysis of Precambrian kerogens - Constraints and capabilities.** B. Nagy (Arizona, University, Tucson, AZ). *Journal of Molecular Evolution,* vol. 18, May 1, 1982, p. 217-220. 41 refs. Grant No. NGR-03-002-171.

Precambrian kerogens are currently considered to be the primary candidates for the search of biochemical fossils. Degradation of kerogens by relatively 'mild' pyrolysis techniques, such as under high vacuum, can liberate indicative structural moieties which were incorporated in, and perhaps shielded by, these solid and highly condensed, basically aromatic substances. It is necessary to observe analytical constraints (sample size and shape, temperature, pressure, time, etc.) in order to prevent an overabundant yield of secondary pyrolyzates (inter- and intramolecular rearrangements) which can prevent kerogen characterization. Potential biochemical fossils have been found in Precambrian kerogens. Demonstratable syngenetic biochemical fossils are expected after kerogen diagenesis and catagenesis is understood in sufficient detail, and when pyrolysis is augmented by multiple, improved analytical techniques. (Author)

**A82-33394 † Industrial hygiene and the prophylaxis of occupational diseases in work with lasers (Gigiena truda i profilaktika profpatologii pri rabote s lazerami).** V. P. Zhokhov, A. A. Komarova, L. I. Maksimova, V. R. Muratov, Iu. P. Pal'tsev, and A. I. Semenov. Moscow, Izdatel'stvo Meditsina, 1980. 208 p. 109 refs. In Russian.

The book treats questions of the protection of workers from laser radiation and methods for the prophylaxis and therapy of laser-induced injuries in persons exposed to laser radiation in the work environment. Following a review of the fundamental principles and characteristics of lasers and the areas of laser applications, the laser radiation field is discussed, with particular emphasis on methods for the measurement of coherent field intensity. Mechanisms for the biological effects of laser radiation are examined, and attention is given to the effects of laser radiation on the visual organs and on the skin. Clinical data concerning the physiological condition of laser specialists is reviewed, and the establishment of norms for laser radiation is discussed. Aspects of industrial hygiene in work with lasers are then considered, including the shielding of the visual organs from direct and reflected laser radiation and the medical surveillance of laser workers. A.L.W.

**A82-33595** **Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with crista membrane fragments of mitochondria.** S. Li, J. Xiao, and J. Cai (Chinese Academy of Sciences, Plant Physiology Institute, Shanghai, People's Republic of China). *Scientia Sinica*, vol. 24, Nov. 1981, p. 1575-1584. 8 refs.

**A82-33600** **The nature of radiation damage of haemopoietic stem cells under continuous irradiation at low dose rate.** Z. Wu, X. Jiang, S. Shen, S. Tan, and H. Xue (Academy of Military Medical Sciences, Institute of Radiation Medicine, Beijing, People's Republic of China). *Scientia Sinica*, vol. 24, Dec. 1981, p. 1743-1752. 15 refs.

**A82-33726** † **Myoglobinemia as a criterion for the early diagnosis of acute myocardial infarction /Literature review/ (Mioglobinemiia kak kriterii rannei diagnostiki ostrogo infarkta miokarda /Obzor literatury/).** D. Ia. Shurygin, Iu. N. Shishmarev, and A. M. Grachev. *Voenno-Meditsinskii Zhurnal*, Apr. 1982, p. 33-37. 33 refs. In Russian.

The potential for the use of myoglobinemia as an indicator of cardiac damage is considered on the basis of literature data. The specificity of other biochemical indicators of myocardial infarction is discussed and it is pointed out that in contrast to these factors, the differential diagnosis of heart damage from elevated blood myoglobin levels poses no problem. Spectrophotometric and immunologic methods for the detection of myoglobinemia are examined, and experience with the use of these methods in patients with acute myocardial infarction is reviewed. Analysis of the time characteristics of the rise in plasma myoglobin following acute myocardial infarction as well as its complications, stenocardia, muscular diseases and muscular damage indicates that a transitory myoglobinemia is a reliable indicator of acute myocardial infarction, appearing earlier than elevations in plasma enzyme and isoenzyme levels. A.L.W.

**A82-33727** † **Psychosomatic self-regulation - An effective method for sustaining pilot work capacity during a prolonged flight (Psikhosomaticheskaia samoreguliatsiia - Effektivnyi metod podderzhaniia rabotosposobnosti letchika v ditel'nom polete).** S. G. Mel'nik and A. V. Shakula. *Voenno-Meditsinskii Zhurnal*, Apr. 1982, p. 47-50. 13 refs. In Russian.

Possibilities for the use of psychosomatic self-regulation as a technique for the correction of pilot work capacity over the course of a prolonged flight are examined. The method involves training in the attainment of a state of muscular relaxation, the development of abilities in voluntary vascular dilation, voluntary respiratory control, heart rate control and cerebral vascular control, as well as skills in autogenic activation. Laboratory simulations and experiments under actual flight conditions have shown the periodic performance of autogenic stimulation to improve pilot tracking performance and mental abilities over the course of a 6-hour flight, while slowing the decline in the condition of the visual analyzer, auditory discrimination, and hemispherical asymmetry, decreasing subjective fatigue and improving flight performance. Psychosomatic self regulation thus allows the in-flight self-correction of pilot physiological condition and work capacity related to the activation of the central nervous system under conditions of growing fatigue. A.L.W.

**A82-33728** † **The prevention of dysadaptive changes in sailors at sea (Preduprezhdenie dizadaptivnykh izmenenii u moriakov v plavanii).** V. S. Novikov and V. N. Bortnovskii. *Voenno-Meditsinskii Zhurnal*, Apr. 1982, p. 50-52. 7 refs. In Russian.

Measures for the prevention of dysadaptive changes in immune status and physical condition were investigated in sailors over the course of a prolonged voyage. Immunobiological reactivity and physical work capacity were evaluated at the start, middle and conclusion of the voyage in 10 subjects undergoing periodic physical exercise, ultraviolet radiation exposure, vitamin C supplementation and electric sleep. Increases in leukocyte absorptive and digestive capacities and reductions in leukocytolysis and the microbial population of the skin indicative of positive changes in immunologic reactivity were found in the experimental group, while negative changes in these parameters were found in the controls. Decreases in exercise tolerance were observed in both groups, although by the end of the voyage tolerance was 14.3% higher in the experimental than in the control group. The combination of measures employed is thus recommended for increasing tolerance to adverse factors, maintaining work capacity and preventing the development of premorbid and pathological conditions. A.L.W.

**A82-33749** **The roles of axes of symmetry in orientation illusions.** A. A. Hartley (Scripps College, Claremont, CA). *Perception and Psychophysics*, vol. 31, no. 4, Apr. 1982, p. 367-375. 22 refs.

The lines of a surrounding figure can induce illusory distortion in the apparent orientation of an enclosed line. The axes of symmetry of the figure have been implicated in this distortion. A series of experiments showed generally that the effects are attributable to the axes of bilateral symmetry rather than to less restrictively defined axes of topological symmetry, although those axes may produce other illusory effects. Furthermore, the distortions affect the whole line rather than only parts of it. These results are consistent with interactions of thy lines in the orientation rather than position domain. It is suggested that axes of symmetry may play an important role in pattern recognition. (Author)

**A82-33751** **Man under vibration: Suffering and protection.** Edited by G. Bianchi (Milano, Politecnico, Milan, Italy), K. V. Frolov (Akademiia Nauk SSSR, Institut Mashinovedeniia, Moscow, USSR), and A. Oledzki (Warszawa, Politechnika, Warsaw, Poland). Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers (Studies in Environmental Science. Volume 13), 1981. 451 p. $74.50.

Among the topics discussed are the effects of muscle vibration and joint oscillation on human motor mechanisms, the immediate effect of vibrations transmitted to the hand, the determination of ankle joint muscle biomechanical characteristics by means of vibration tests, the dynamic modeling and vibratory response of human subjects in the heave mode, an anthropometric model of the human hand, and nonlinear effects connected with biomechanical system spatial vibrations. Also considered are an automatic system for the measurement of vibration parameters affecting the human body, the measurement of contact forces between the human body and mechanical equipment, kinematic-type, active vibroisolation devices, vibroisolation in portable tools, and the properties of nonlinear vibration protection systems with different dissipative characteristics. O.C.

**A82-33752** **Modern problems of vibrations in the systems 'man-machine-environment'.** K. V. Frolov (Mechanical Engineering Research Institute, Moscow, USSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 1-41. 42 refs.

The characteristics of vibrations to which human operators are subject in industrial production environments are described, and the mechanical and physiological responses of the human body to such vibrations are analyzed. Experimental studies of the dynamic characteristics of the body and arms of an operator show a significant change in the parameters of dynamic biomechanical system models, in connection with changes of position or degree of muscular tension. Attention is given the instability of the human body's dynamic characteristics under long-term vibrational influence, and active-change modeling of the body's mechanical parameters is discussed. O.C.

**A82-33753** **Effects of muscle vibration and joint oscillation on human motor mechanisms.** G. C. Agarwal (Illinois, University, Chicago, Il) and G. L. Gottlieb (Rush-Presbyterian-St. Luke's Medical Center, Chicago, IL). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN-Polish Scientific Publishers, 1981, p. 42-54. 31 refs. NSF Grant No. ENG-76-08754; Grants No. NIH-NS-12877; No. NIH-NS-00196.

The tonic vibration reflex (TVR) affects a joint's response to sinusoidal oscillation in the same facilitatory manner that is seen with tonic voluntary contraction. In contrast, tonic voluntary contraction facilitates the myotatic reflex while the TVR inhibits it in the soleus muscle. The degree of myotatic reflex inhibition is input frequency dependent. In discrete tracking task, vibration increases simple and choice reaction times. However, the error correction time is not influenced. (Author)

**A82-33754** **Effect of base oscillations on the human skeletal muscle and joint forces in a standing posture.** A. Seireg and R. Arvikar (Wisconsin, University, Madison, WI). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN-Polish Scientific Publishers, 1981, p. 55-64. 10 refs.

A comprehensive computer model of the musculoskeletal system is utilized in conjunction with published data on human response and tolerances to vibration for the calculation of the muscle forces and the stress variation at different base frequencies. The results show that the peak pressures on the spinal column are approximately the same as those calculated at the limit of the subject's weight lifting capability. (Author)

**A82-33755** **Mechanoreceptor systems of the organism from the viewpoint of vibrational biomechanics.** A. S. Mirkin and S. V. Petukhov (Mechanical Engineering Research Institute, Moscow, USSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 65-75. 13 refs.

A discussion is presented of results of biomechanical studies of vestibular apparatus and Pacinian-corpuscle mechanoreceptor systems subjected to vibration, with attention to the frequency characteristics of the latter. The importance of the 100 Hz frequency for both mechanoreceptor systems is noted, and a scale model of the human semicircular canal system, constructed on the basis of dynamical similarity theory, is described. The model establishes purely mechanical reasons for the entering of false vestibular information into the nervous system under the condition of low-frequency angular vibration of the head. O.C.

**A82-33756** **Immediate effects of vibration transmitted to the hand.** H. Dupuis and G. Jansen (Mainz, Universität, Mainz, West Germany). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 76-86. 10 refs.

The biomechanical behavior of the hand-arm system is studied, with attention to its subjective sensations and physiological changes, under conditions of vibration transmitted to the hand by vibrating tools, machinery and work pieces. It is found that the wrist, and with less amplification the elbow, show resonances at 10-20 Hz. In addition, it is determined that subjective perception decreases with increasing frequency at constant acceleration, and that the application of static grip force in the absence of vibration causes significant skin temperature reduction although it remains at the same, lowered level under vibration stress. O.C.

**A82-33757** **Basic principles for hygienic rating of industrial whole-body vibration in the U.S.S.R.** A. A. Menshov (Institut Gigieny Truda i Profzabolevanii, Kiev, Ukrainian SSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 87-96. 10 refs.

It is noted that, despite resonance frequency similarities, the principles which are the bases of the USSR's hygienic rating for whole-body vibration encountered by industrial, agricultural and transportation workers differ from those of the International Standard ISO-2631. The Soviet rating is based on octave-band-measured vibrovelocity, in contrast to the vibroaccelerations of the International Standard. The experimental bases for vibrovelocity evaluation standards were established by Menshov (1971). Tabular data are presented on changes of physiological function due to vibration exposure. O.C.

**A82-33758** **Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions.** R. Gilioli, M. Tomasini, C. Bulgheroni, A. Grieco (Clinica del Lavoro, Milan, Italy), and F. Grazia (Istituto Neurologico, Milan, Italy). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 97-129. 6 refs.

Four task-related categories of risk, encompassing both peripheral angiological and neurological impairment, are determined by an investigation of the upper limbs of iron foundry workers using vibrating tools. A questionnaire was devised for the compilation of subjective symptoms, and objective signs of angiopathy were obtained through clinical observation and photopletismography in basal conditions and after the cooling of hands in running water. The risk categories are for the tasks of finishers, former finishers not exposed to the foundry vibration environment for a mean period of three years, mechanical molders, and manual molders. While finishers and former finishers were found to have sustained peripheral neurogenic lesions, both categories of molders had normal neurological characteristics. O.C.

**A82-33759** **Comparative analysis of human and subhuman operator performance in a control loop.** P. K. Bhagat, V. N. Gupta, and D. F. McCoy (Kentucky, University, Lexington, KY). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 130-140.

A preprogrammable, electronic visual tracking facility was used in an attempt to compare the performance of human operators with that of three Rhesus monkeys which had been trained by means of electric shock negative reinforcement. A parameter-optimization algorithm was used to compute a five-parameter performance model with describing function data obtained under a compensatory tracking task, for the cases of the monkeys and of two human subjects. No significant differences between the two species are found in the results, with transportation lag ranging from 0.08 to 0.19 sec. The similarity in functional relationships between human and subhuman operators supports monkey-man extrapolations in stressful tracking situations. O.C.

**A82-33760** **The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests.** V. M. Zatsiorskii, A. S. Aruin, L. M. Raisin, and G. Ia. Panovko (Gosudarstvennyi Tsentral'nyi Institut Fizicheskoi Kul'tury, Moscow, USSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 166-175. 14 refs.

A method is developed for investigation of the biomechanical characteristics of lower extremity muscles, under conditions similar to natural ones, and values are determined for the equivalent damping coefficient and stiffness factor of human ankle joint muscles as a function of the force manifested. It is found through 2-70 Hz vibrating platform tests that, while muscle stiffness characteristics are lower than those calculated by means of damped oscillations, they are in agreement with the damping coefficient value. It is also determined that muscle stiffness increases with measured force. O.C.

**A82-33761** **Dynamic modeling and vibratory response of human subjects in heave mode.** D. P. Garg (Duke University, Durham, NC). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 176-189. 22 refs.

A 16-mass, lumped-parameter dynamic model of human subjects which reproduces measured response peaks at various resonance frequencies and conforms adequately to experimental response curves at the remaining frequencies is described. It is shown by results that human vibration transmissibility may be measured in the 1-50 Hz frequency range. In addition, a linear lumped-parameter model which both accounts for human anatomy and matches average test frequency response in magnitude and phase angle can be derived. It is found that standing human subjects under vibratory input conditions exhibit four predominant peaks at approximately 2, 6, 20 and 33 Hz, with a resonance near 43 Hz due to head rotation. The model presented may be used for the prediction of human body responses to other types and combinations of inputs, along with the compilation of prosthetics-design data. O.C.

**A82-33762** **Some problems of identification and modelling of the human body.** M. Ksiazek (Krakow, Politechnika, Krakow, Poland). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 200-209. 11 refs.

The modeling of the sitting human body when it is subjected to vertical harmonic vibration is undertaken by means of a procedure based on electric circuit theory. The possibilities and difficulties inherent in the application of mechanical impedance to the identification and modeling of the human body, when it is considered as a mechanical passive system, are also discussed. It is found that the two mechanical models of the sitting human body presented consist of dynamical, independent subsystems having the same structures. These subsystems may be taken to represent the head and spinal column and the trunk. O.C.

**A82-33763** **Non-linear effects connected with the spatial vibrations of biomechanical systems.** B. A. Potemkin and K. V. Frolov (Mechanical Engineering Research Institute, Moscow, USSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 226-234. 9 refs.

The forced dynamic response of the human body under vibration is investigated through several simple classes of mechanical models, with attention given to that class of spatial models which permit the determination of detailed nonlinear effects due to the active and passive properties of biomechanical systems. The observed nonlinear phenomena are found to be more essential at high vibration amplitude, leading to their appearance at low excitation frequencies. It is concluded that human muscle activity under vibrational excitation is both specific and sensitive, vindicating the use of active biomechanical models for the case of low-frequency vibration. O.C.

**A82-33764** **Vibration defence of man - Questions of modeling.** O. S. Naraikin and G. Ia. Panovko (Akademiia Nauk SSSR, Institut Mashinovedeniia, Moscow, USSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 235-246. 10 refs.

A classificatory scheme for methods used in the defense of the human body against vibration is presented, along with a discussion of experimental techniques for the determination of dynamic characteristics and the definition of mechanical models for the human body. A distributed parameter mechanical model is suggested, and model parameters are calculated. Head, shin, thigh and foot elements of the model are rigid, while the spinal column is represented by an elastic pivot. O.C.

**A82-33765** **Automatic system for study and measurement of vibration parameters affecting human body.** V. V. Kliuev, V. A. Klochko, V. G. Gradetskii, D. A. Grechinskii, V. G. Rygalin, and Iu. V. Ivanov (Nauchno-Issledovatel'skii Institut Introskopii, Moscow, USSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co;Warsaw,PWN-Polish Scientific Publishers, 1981,247-260

An automatic system is proposed for the measurement of vibration process parameters affecting the human body. Detailed flowcharting of the system's software and hardware is given, showing the use of data input modules which control other modules, data acquisition modules for sampling and discretization of analog values, processing modules which conduct analyses of input data, control and rewrite modules, and data output modules which manage display units. The perspective afforded by the system described allows not only the prompt evaluation of vibration effects, but also the recommendation of improvements in vibration protection methods. O.C.

**A82-33766** **Critical assessment of common methods to determine vibrational stress of hand-arm system.** P. Krause, A. Orban, K. J. Panzke, and K. Popov (Ministry of Building, Techno-Scientific Centre of Safety Engineering, East Germany). In: Man under vibration: Suffering and protection.

7

Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 261-274.

Common measuring method errors in the study of the hand-arm system are discussed. It is shown that contact and pressure forces must be taken into account, in addition to the time function of the mechanical vibrations applied. The extent to which hand-arm system vibrations propagate through soft and osseous tissue, as well as joints, is noted. It is recommended in light of this that correction factors depending on tissue size and thickness be given for measurements in which vibration pick-ups are attached to hand-arm system surfaces. O.C.

**A82-33767** **On the measuring of contact forces between human body and equipment.** A. Oledzki (Warszawa, Politechnika, Warsaw, Poland). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 275-286.

Descriptions are given of the design and properties of three types of transducers used in the measurement of contact forces between the human body and mechanical equipment. All the transducers are applicable to dynamic measurement. A novel method is described for the measurement of contact forces which, although initially applied to static measurement, may also be used for the determination of the contact forces caused by vibrations. The conventionally used devices include miniature dynamometers, pneumatic gages, and electrokinetic transducers. O.C.

**A82-33768** **A survey of vibration control methods.** A. Muszynska (Polska Akademia Nauk, Instytut Podstawowych Problemow Techniki, Warsaw, Poland). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 287-314.

Vibration control methods, involving automatic structural or parametric modifications by means of external power supplies with feedback control as well as simpler passive methods, are discussed. Attention is given to a mathematical model for the formulation of vibration control criteria, and to the dissipation of mechanical energy by radiation, internal or material damping, slip damping during flexural deformation, fluid pumping at joints, and the use of sandwich construction and antivibration mountings. It is noted that analysis and modification methods developed for industrial machinery-scale applications may be scaled down to sporting equipment or up to large civil, astronautical and marine engineering problems. O.C.

**A82-33769** **Optimization of stochastic man-machine systems.** R. I. Furunzhiev and A. Ia. Ismailov (Belorusskii Politekhnicheskii Institut, Minsk, Belorussian SSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 315-329. 15 refs.

The comparative efficiency of stochastic optimization methods in the design of stochastic machine systems is considered, in light of the performance of seven algorithms on problems of test functions, test models of stochastic vibratory systems, and models of wheeled vehicles employing a nonlinear vibration-isolation system for random disturbances. Emphasis is put on the comparative convergence time of the stochastic algorithms considered. Best results were obtained with the stochastic vibratory object method, which required five hours of computation time for the asymptotic optimization of a man-machine system. O.C.

**A82-33770** **Vibration machines and man.** E. I. Shemiakin, N. P. Benevolenskaia, and A. Ia. Tishkov (Akademiia Nauk SSSR, Institut Gornogo Dela, Novosibirsk, USSR). In: Man under vibration: Suffering and protection. Amsterdam, Elsevier Scientific Publishing Co.; Warsaw, PWN - Polish Scientific Publishers, 1981, p. 346-352.

The effects of vibrating mining machinery employed in the Soviet Union on the human body is considered, with attention to trends in the mitigation of harmful vibration effects on human operators. Among the man-machine systems studied are electric mine locomotives, loading belts and conveyors and vibrating screens. The use of the traveling wave principle in vibrating machines is cited as a case of successful vibration reduction in mining machinery. O.C.

**A82-33895** # **Solar bacterial biomass farm for space vehicles.** H. Tributsch (Berlin, Freie UniversitÄt, Berlin, West Germany). *Astronautics and Aeronautics*, vol. 20, June 1982, p. 66-68. 8 refs.

The use of the bacterium Thiobacillus ferrooxidans to produce biomass ten times as efficiently as the best agricultural land is discussed. A solution of Fe(2+), carbon dioxide from the air, and oxygen is all that the bacterium needs to grow and multiply and produce biomass at 35 percent efficiency. Depending on what process is used to manufacture the Fe(2+), the final efficiency would range from 6 to 17.7 percent, compared to the 1 percent efficiency of photosynthesis. A solar farm in space producing biomass by means of a continuous-flow apparatus is described. The bacterium has characteristics suitable for living in outer space: ability to grow in the dark, toleration of harsh living conditions, and resistance to radiation. C.D.

**A82-33906** * # **Studies of planning behavior of aircraft pilots in normal, abnormal, and emergency situations.** G. Johannsen, W. B. Rouse, and K. Hillmann. Research supported by NASA; Grants No. NsG-2119; No. NAG2-123. Wachtberg-Werthhoven, West Germany, Forschungsgesellschaft für angewandte Naturwissenschaften, Forschungsinstitut für Anthropotechnik (Forschungsinstitut für Anthropotechnik, Bericht, No. 53), 1981. 91 p. 17 refs. In English and German. $4.10.

A methodology for the study of human planning behavior in complex dynamic systems is presented and applied to the study of aircraft pilot behavior in normal, abnormal and emergency situations. The method measures the depth of planning, that is the level of detail employed with respect to a specific task, according to responses to a verbal questionnaire, and compares planning depth with variables relating to time, task criticality and the probability of increased task difficulty. In two series of experiments, depth of planning was measured on a five- or ten-point scale during various phases of flight in a HFB-320 simulator under normal flight conditions, abnormal scenarios involving temporary runway closure due to snow removal or temporary CAT-III conditions due to a dense fog, and emergency scenarios involving engine shut-down or hydraulic pressure loss. Results reveal a dichotomy between event-driven and time-driven planning, different effects of automation in abnormal and emergency scenarios and a low correlation between depth of planning and workload or flight performance. A.L.W.

**A82-33909** # **Working in space.** G. V. Butler and H. L. Wolbers (McDonnell Douglas Astronautics Co., Huntington Beach, CA). *AIAA Student Journal*, vol. 19, Fall 1981, p. 2-9, 47.

Aspects of the history, current status and future plans for humans working in space are discussed. Following a brief outline of the development of manned space flight, the facilities on board the Skylab orbital station are described, and experience gained in spacecraft maintenance and repair as well as the testing of a manned maneuvering unit and the operation of scientific experiments on Skylab is related. The potentials of the reusable Space Transportation System are then discussed in relation to the benefits that the transport of persons with a variety of talents may have for various world problems. Changes in the nature of the tasks to be performed as space missions evolve from short sorties to permanent installations supporting a large work force, as exemplified by the proposed Space Operations Center are then considered, with particular attention given to crew work schedules and space construction activities. It is concluded that almost any task that man can perform on the ground can also be performed in space, provided adequate tools and positioning restraints are used. A.L.W.

**A82-33910** # **Sociological aspects of permanent manned occupancy of space.** B. J. Bluth (California State University, Northridge, CA). *AIAA Student Journal*, vol. 19, Fall 1981, p. 11-15, 48.

Potential difficulties in group dynamics which may occur in long-term space habitation by a large group, such as the crew envisioned for the Space Operations Center, are discussed. Previous studies of the social aspects of small groups in confined, isolated and stressful environments, including Antarctic stations, oceanographic research vessels, submarines, undersea laboratories and space simulators are reviewed, and Soviet experience with extended-duration space missions is considered. It is pointed out that in none of these experiences did prior evaluations predict the observed difficulties in adjustment, which included interpersonal hostility, hostility towards the ground crew, boredom, depression and exhaustion. The nature and possible means of relieving the principle sources of stress to be encountered in a long-duration space mission are then discussed, with particular attention given to conflicting social functions, group size, group composition, group organization, scheduling and architectural factors. A.L.W.

**A82-34247** **Studies on the property and transplantation of hemopoietic stem cells from peripheral blood.** Z. Wu, S. Shen, A. Zhu, H. Xue, C. Yan, and R. Zhu (Academy of Military Medical Sciences, Institute of Radiation Medicine, Beijing, People's Republic of China). *Scientia Sinica*, vol. 24, Sept. 1981, p. 1302-1312. 17 refs.

Comparative studies of the properties of murine hemopoietic stem cells from different sources revealed that the peripheral hemopoietic stem cell is relatively weaker than the hemopoietic stem cell from bone marrow in promoting the recovery of hemopoiesis in irradiated animals. This is due to the heterogenity of the stem cell population in which some aged cell subpopulations are coexisting. The modified potential in proliferation and differentiation of hemopoietic stem cells in the peripheral blood seems to be irreversible under normal physiological conditions. In a preliminary experiment, the use of an antithymocyte immunoglobulin to eliminate immunocompetent cells proved effective in reducing the severity and incidence of secondary diseases and in increasing the number of survivors of lethally irradiated semi-isologous mice after transplantation of parental peripheral mononuclear cells. A comparative study is presented of the parameters of the nystagmus reaction induced by the use of air and water for the caloric stimulation of the labyrinths. Air calorization was performed using air at temperatures of 24 and 50 C and a flow rate of 4 l/min in healthy subjects along with calorization by the Hallpike method with water at 30 and 44 C. Results of electro-nystagmography indicate the fundamental characteristics of nystagmus during air and water calorization to differ insignificantly although the latent period for air calorization was more prolonged. An asymmetry in labyrinthine excitability is also observed, corresponding to values of 12.1% for water calorization and 22.0% for the procedure using air. It is concluded that air calorization has a potential for wide clinical applications provided certain methodological factors are taken into account. A.L.W.

Indirect immunofluorescence (performed on 70 healthy subjects) has shown that the blood serum of healthy subjects reacts with cytoplasm antigens of epidermis differentiated cells (EDCs) in 100% of the cases. The level of antibodies and the immunomorphological picture of the reaction are characterized by high constancy and intense fluorescence of EDCs, while the reaction with basal layer cell antigens is observed comparatively rarely and is not pronounced. Attention is given to the possible role of antibodies in the blood serum and to the role of their complexes with tissue antigens in the regulation of the vital activity of the cells and the immune response to the host antigens. It is shown that the coupling of the 2,3-DPH functional analog, pyridoxal-5'-phosphate (PP) to hemoglobin (Hb) and its polymer (HbP) makes it possible to obtain an artificial oxygen carrier with gas-transport characteristics similar to those of freshly prepared donor's blood. The coupling of PP to Hb and HbP intensifies their interaction with other physiologically important ligands (H+ and CO2) and changes the pattern of the relation of P50 to the hemoprotein concentration in a solution. In Russian.

It is shown that in rats exposed to emotional and pain stress, the electrical activity of the retina is inhibited as manifested in a decrease of the magnitude of electroretinogram waves. At the same time, lipid-peroxidation products accumulate and the content of the natural antioxidant alpha-tocopherol decreases in the retina. It is found that preliminary administration of synthetic antioxidants (4-methyl-2,6-ditretbutylphenol, OP-6 belonging to the hydroxypyridine series) prevents the accumulation of lipid-peroxidation products and protects the electrical activity of the retina. In Russian.

Ultrastructural and metabolic changes in brain and liver cells provoked by repeated exposure to low-intensity nonionizing radiation are investigated. Morphological, histochemical, and biochemical studies were performed on cells from 478 albino rats having undergone daily microwave irradiation at intensities of 50 and 10 microwatt/cm for up to 2 months. Comparisons with intact animals and with animals exposed to simulated altitude and high doses of microwave radiation alter the structural and functional bases for the regulation of metabolic processes; conformational changes in biologically active compounds are induced, thus damaging the fine structures of the cell, and the patterns of energy production are changed, with an uncoupling of mitochondrial oxidative phosphorylation and an increase in glycolysis at the expense of synthesis. Resistance to hypoxia and the effects of higher doses of radiation are also increased. A.L.W.

**A82-34688 † An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings (Avtoradiograficheskoe i elektronnomikroskopicheskoe issledovanie vliianiia nekotorykh otechestvennykh pereviazochnykh materialov na zazhivlenie ran v eksperimente).** G. N. Dudnikova, T. T. Daurova, and I. B. Rozanova (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Biulleten' Eksperimental'noi Biologii i Meditsiny,* vol. 93, Apr. 1982, p. 116-118. 7 refs. In Russian.

**A82-34689 † The level of group development as a factor influencing the relation between group size and successfulness (Uroven' razvitiia gruppy kak faktor, vliiaiushchii na vzaimosviaz' ee velichiny i uspeshnosti).** R. S. Nemov and A. Ia. Galvanovskis. *Voprosy Psikhologii,* Mar.-Apr. 1982, p. 103-108. 22 refs. In Russian.

Previous studies have produced contradictory data concerning the relation of group size with group success whether measured in terms of individual contributions, productivity or satisfaction. The present study seeks to explain these contradictions in terms of the influence of the social and psychological development of the group. Evaluations of group development and successfulness according to the three criteria indicated were performed for 38 groups of schoolchildren containing four to seven members each. In groups exhibiting high and moderate levels of development, task efficiency, the average individual contribution and member satisfaction are found to be independent of group size, while in groups with low levels of development and in randomly assembled groups, a statistically significant correlation is obtained between these factors. A.L.W.

**A82-34690 † The direction of the process of computer operator training (Upravlenie protsessom obucheniia operatorov EVM).** I. K. Valovaia. *Voprosy Psikhologii,* Mar.-Apr. 1982, p. 115-121. 7 refs. In Russian.

The psychological characteristics of computer operator activity and the factors influencing the learning of this activity are studied to aid in the direction of the education of computer operators. Experiments were conducted to determine the characteristics of the processing of a standard set of information in which it is necessary to distinguish signals contained in the information under various mental workloads, the characteristics of the improvement in the speed and accuracy of information processing and the changes in the rate of information processing brought about by mental workloads and fatigue in male and female students converting an informational program into punched cards. Results are used to derive a model of the training process which may be used to monitor progress in mastering skills, and predict individual patterns of skill acquisition and the degree of mental fatigue encountered when working with test problems of varying complexity. A.L.W.

**A82-34691 † Test for the study of the efficiency of the tactile-motor analyzer (Test dlia issledovaniia rabotosposobnosti taktil'no-motornogo analizatora).** A. S. Lukauskas, V. B. Obelianis, and Iu. P. Rauba. *Voprosy Psikhologii,* Mar.-Apr. 1982, p. 130-132. In Russian.

A method is presented which allows the assessment of the functional condition of the central nervous system through the measurement of tactile-motor efficiency. The test involves the manual separation of differently textured objects of the same size on the basis of their textures alone without the use of visual clues. Results are tabulated in terms of the time required, the number of errors, and the information processing rate in bits per second. The method is particularly useful in the workplace, and for the evaluation of the visually handicapped. A.L.W.

A. Semenova and A. A. Korolev (I Moskovskii Meditsinskii Institut, Moscow, USSR). *Gigiena i Sanitariia,* Mar. 1982, p. 11-13. In Russian.

**A82-34695 † Space biology and medicine (Kosmicheskaia biologiia i meditsina).** E. I. Vorob'ev (Ministerstvo Zdravookhraneniia SSSR, Moscow, USSR) and A. R. Kotovskaia. *Zemlia i Vselennaia,* Mar.-Apr. 1982, p. 32-35. In Russian.

Activities in the fields of space biology and medicine conducted within the framework of the Intercosmos program are discussed. Early experiments conducted to demonstrate the possibility of surviving in a weightless environment are indicated, and the results of biological experiments flown on Cosmos biosatellites are outlined which demonstrated the effects of weightlessness on muscular and bone tissues and the possibility of counteracting these effects by the use of centrifuge-generated artificial gravity. Medical experiments performed during nine international manned space flights are then discussed with particular attention given to devices used in studies of the cardiovascular and respiratory systems, auditory and gustatory perception, the prevention of changes in leg muscular and supportive functions, motion sickness drugs, psychological effects, mental work capacity and the prevention of mood deterioration during the acute phase of adaptation to space flight conditions. A.L.W.

**A82-34696 † The organism and magnetic fields (Organizm i magnitnye polia).** Iu. A. Kholodov (Akademiia Nauk SSSR, Institut Vysshei Nervnoi Deiatel'nosti, Moscow, USSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 13, Apr.-June 1982, p. 48-64. 117 refs. In Russian.

Current knowledge concerning the biological effects and generation of magnetic fields is reviewed. Following a classification of magnetocybernetics, into the areas of magnetobiology, biomagnetism and the magnetic control of biosystems, the biotropic parameters of magnetic fields are examined, with particular attention given to induction, gradient, vector, frequency, pulse shape, exposure and localization. Characteristics of the organism affecting its reponse to a magnetic field, including age, sex, individual differences, and the tissues affected, are considered, and the temporal characteristics, localization and actual nature of the reaction of an organism to a magnetic field are examined, with particular attention given to the general readjustment reaction and the slow initial reaction. Data from the recording of the magnetic fields of the human heart and brain is also presented, and possible physical and chemical mechanisms for the biological effects of magnetic fields are discussed. A.L.W.

**A82-34697 † The nervous regulation of the liquid state of the blood and its coagulation (Nervnaia reguliatsiia zhidkogo sostoianii krovi i ee svertyvaniia).** T. M. Kalishevskaia and M. G. Golubeva (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Uspekhi Fiziologicheskikh Nauk,* vol. 13, Apr.-June 1982, p. 93-122. 160 refs. In Russian.

The paper reviews the current state of knowledge concerning the neurohumoral regulation of blood coagulation and the maintenance of the blood in a liquid state in the whole organism. The classical enzymatic theory of blood coagulation is outlined, however it is noted that the sequence of biochemical reactions identified with the coagulation process does not take into account the influence of the organism itself. The nature and functioning of blood anticoagulants in the regulation of the liquid state of the blood is then examined, and vascular bed chemoreception is discussed as the fundamental physiological mechanism controlling the blood coagulant and anticoagulant systems according to thrombin and plasmin levels. Experimental data concerning the role of central brain structures and the sympathetic and parasympathetic nervous systems in the regulation of the blood coagulation system is then discussed with particular emphasis on the role of the hypothalamus as the locus of the interaction of regulatory mechanisms. A.L.W.

**A82-34698 † The prognostic value of the glucose tolerance test (Prognosticheskoe znachenie proby na tolerantnost' k gliukoze).** V. G. Baranov, A. M. Sitnikova, and L. I. Konradi (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad; Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *Kazanskii Meditsinskii Zhurnal,* vol. 63, Jan.-Feb. 1982, p. 18, 19. 7 refs. In Russian.

Characteristics of a normal glucose tolerance test most predictive of the future development of diabetes mellitus and other disturbances in glucose tolerance were studied on the basis of a retrospective study of 564 women with initially normal glucose tolerance. Comparison of the results of a second glucose tolerance test conducted 2 months to 16 years following a first test with those of the first reveals 33.8% of the subjects to have developed disturbances in glucose tolerance (25.7% of the questionable type and 8.1% of the diabetic type). Analysis of the results of the first examination of the three groups identified reveals that, while all values of blood glucose levels were within the normal range, those observed subsequently to have impaired tolerances tended to exhibit higher levels following glucose loading in the first test. It is concluded that glycemias of 7.8 to 9.9 mmole/l 1 hour following glucose loading and 6.1 to 7.2 mmole/l 2 hours after loading are each indicative of an increased risk of diabetes mellitus. A.L.W.

**A82-34768 The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity (Vozdeistvie elektromagnitnykh kolebanii millimetrovogo diapazona dlin voln na biologicheskie struktury i organizmy razlichnoi slozhnosti).** N. D. Deviatkov, O. V. Betskii, E. A. Gel'vich, M. B. Golant, T. B. Rebrova, L. A. Sevast'ianova, and A. Z. Smolianskaia (Akademiia Nauk SSSR, Institut Radiotekhniki i Elektroniki, Moscow, USSR). In: Electromagnetic compatibility 1980; Proceedings of the Fifth International Wroclaw Symposium and Exhibition, Wroclaw, Poland, September 17-19, 1980. Part 2. Wroclaw, Wydawnictwo Politechniki Wroclawskiej, 1980, p. 561-570. 15 refs. In Russian.

The paper examines the main features of the effect of millimeter-wave radiation on biological objects at the molecular, cellular, and organism level. The dependence of the interaction on irradiation time and on the irradiation power density is investigated for the following biological objects: hemoglobin and erythrocytes in human blood, the E. coli bacillus, golden staphylococcus, mold and fungus, and mice and rats. Millimeter-wave radiation is found to have a powerful resonant effect on the development and activity of biological objects; this effect is observed at various frequencies with an irradiation power density of several mW/sq cm. B.J.

**A82-34830 Reconstruction of spatial information in the human visual system.** G. Nyman and P. Laurinen (Helsinki, University, Helsinki, Finland). *Nature*, vol. 297, May 27, 1982, p. 324, 325. 9 refs.

In the considered psychophysical context, the term 'reconstruct' refers to the observer's ability to perceive certain predetermined spatial features, such as waveform or spatial frequency, in a stimulus consisting of spatial samples of a grating of particular waveform and spatial frequency. Psychophysical measurements were conducted regarding the number of samples per spatial cycle needed to recognize sinusoidal and square-wave gratings. The obtained results are expressed in terms of sampling efficiency, which relates the measured threshold sampling rate to the Shannon-Whittaker or Nyquist limit of the grating frequency which was studied. The results contradict the models which describe the visual system as a Fourier analyzer in which a complex waveform is recognized on the basis of the information obtained from its harmonics, each of which is channelled through its own spatial frequency selective channel. G.R.

**A82-34831 Local cerebral glucose utilization in non-rapid eye movement sleep.** C. Kennedy (U.S. Public Health Service, Laboratory for Cerebral Metabolism, Bethesda, MD; Georgetown University, Washington, DC), J. C. Gillin, W. Mendelson, S. Suda, M. Miyaoka, M. Ito, R. K. Nakamura, F. I. Storch, K. Pettigrew, and M. Mishkin (U.S. Public Health Service, Department of Health and Human Services, Bethesda, MD). *Nature*, vol. 297, May 27, 1982, p. 325-327. 9 refs.

Sleep is accompanied by alterations in neurophysiological activity in many discrete regions in the brain. Such alterations could be expected to be accompanied by corresponding changes in local metabolic rate. The specific regions involved in sleep, at least in the stages other than rapid eye movement (REM) sleep, have now been searched for by using the (2-(C-14)) deoxyglucose method for measuring local cerebral glucose utilization in the rhesus monkey. Contrary to what many have predicted, animals during stages 2-4 of sleep exhibited a nonselective, generalized 30% decrease in cerebral metabolic rate. Of the 75 structures measured, none exhibited a higher rate in non-REM sleep than in wakefulness. (Author)

**A82-34834 A computational model of binocular depth perception.** J. E. W. Mayhew (Sheffield, University, Sheffield, England) and H. C. Longuet-Higgins (Sussex, University, Brighton, England). *Nature*, vol. 297, June 3, 1982, p. 376-378. 14 refs.

It is pointed out that the horizontal disparities between a pair of retinal images are inadequate for computing the three-dimensional structure of a scene unless supplemented by independent information about the distance and direction of the fixation point. It is suggested that this supplementary information is derived not from nonvisual sources, but from the vertical disparities of a few nonmeridional image points. This hypothesis is shown to account quantitatively for Ogle's induced effect - the marked distortion of a scene by a vertically magnifying lens placed in front of one eye. (Author)

The practical experience of cosmonauts on the ground and analysis of their activities during space flight is discussed. It is evidenced that control accuracy and precision in decision making by spacecraft commanders, especially in nonprogrammed situations, depend to a great extent on their experience as a pilot. Piloting a space vehicle has features which are peculiar to it alone. Nonetheless, the differences between space flight and the flight of an aircraft in the atmosphere seem fundamental only at first glance. It is concluded that spacecraft flight and aircraft flight have quite a lot in common, primarily as related to spatial orientation in the atmosphere and in space. E.A.K.

Changes observed in animal central nervous system cells due to the reproduction of tick-borne encephalitis arboviruses are described. The disappearance of the rough endoplasmic reticulum, cellular ribosomes, and polysomes in nerve and glial cells, and hyperplasia and hypertrophy of the smooth membranes of the lamellar complex and endoplasmic reticulum with dilatation of cisternae and canals was observed. The grouping of smooth membranes and the appearance on the membranes of nucleoid centers are characteristic. The appearance of vesicles in the cytoplasmic matrix and cisternae of endoplasmic reticulum was observed. Sites where mature virions and alphavirus and flavivirus nucleoids are located and identified. Other changes typical for each pathogen are described. J.D.

V. K. Sologub, M. I. Dolgina, D. A. Donetskiy, S. S. Morozov, V. G. Borisov, Z. G. Goncharova, and G. G. Serov *In its* USSR Rept. Life Sci.: Biomed. and Behavioral Sci., No. 14 (JPRS-79973) 28 Jan. 1982 p 36-39 refs Transl. into ENGLISH from Khirurgiya (Moscow), no. 5, May 1980 p 14-16

Copyright. Avail: Issuing Activity

The use of pigskin xenografts for the treatment of severe burns is evaluated. Clinical observations of the treatment of 60 patients having deep burns over 10 to 70% of their bodies are described. The burns were covered with preserved skin grafts of both allogenic and xenogenic origin. An improvement in neurological and psychological status, the reduction of heat, water, protein, and electrolyte losses, and the prevention of anemia and of microfloral invasion of the wound and were observed. The cytokinin benzylaminopurine strongly stimulated shoot growth, and the number of regenerated buds on the inoculum was proportional to its concentration. These buds produced shoots several centimeters in length which were caused to root on medium containing indolebutyric acid. Transferred to the septic condition of soil, the plantlets were gradually brought into full sunlight where they showed a brief vegetative growth with production of mature type leaves, and flowered. In contrast, seedlings of the same age remained vegetative. Chromosome studies of root smears from the tissue cultured plantlets showed that 2n = 36, the normal number for sexually reproducing guayules. Author

**THE USE OF ANIMALS IN MEDICAL RESEARCH AND TESTING**
Washington GPO 1982 752 p refs Hearings before the Subcomm. on Sci., Res. and Technol. of the Comm. on Sci. and Technol., 97th Congr., 1st Sess., No. 68, 13-14 Oct. 1981

(GPO-87-598) Avail: Subcommittee on Science, Research and Technology

The use of animals in medical research is discussed. Abundant evidence is cited for the view that the research involving animals is beneficial for humans. Other evidence is presented that supports the view that alternative research methods could be employed. Criticism is aimed at the poor care that the animals receive and at the unnecessary suffering they experience. The ethics and morals of animal experimentation are considered. The text of House Resolution 556, a pending bill calling for the establishment of a national center for alternative research is given. R.J.F.

(MBL-1980-4; CIVO-R-6506; TDCK-75132) Avail: NTIS HC A07/MF A01

The sensitivity of the immune system as a criterion for detecting harmfulness of inhaled substances was investigated. Immunological and toxicological data from tests in which rats were exposed to benzene and halothane for six weeks are recorded.

**N82-24815#** Medical Biological Lab. RVO-TNO, Rijswijk (Netherlands).

**INHALATION STUDIES WITH BENZENE IN RATS. PART A: TOXICOLOGICAL DATA**

L. M. Appelman, C. F. Kuper, and D. deRijke *In its* Evaluation of Immunol. Methods for Toxicity Studies in Animals: Inhalation Studies with Benzene and Halothane in Rats Mar. 1980 73 p refs

Avail: NTIS HC A07/MF A01

Subchronic benzene inhalation toxicity was studied by exposing groups of 15 male and 15 female rats to atmospheres containing 0, 25, 250 or 1250 ppm benzene, 6 hr a day, 5 days a week, for 13 weeks. Five males and five females of each group were killed after 6 weeks for interim pathological examination. Two groups of female rats were exposed to 0 or 250 ppm benzene for a period of 6 weeks. Examination shows that benzene concentrations of 1250 or 250 ppm in the atmosphere can induce lymphopenia accompanied by reduced thymus and spleen weights. The no-toxic-effect level of benzene in rats is 25 ppm. Author (ESA)

**N82-24816#** Medical Biological Lab. RVO-TNO, Rijswijk (Netherlands).

**INHALATION STUDIES WITH BENZENE IN RATS. PART B: IMMUNOLOGICAL DATA**

O. Brocades Zaalberg and J. L. F. Gerbrandy *In its* Evaluation of Immunol. Methods for Toxicity Studies in Animals: Inhalation Studies with Benzene and Halothane in Rats Mar. 1980 26 p refs

Avail: NTIS HC A07/MF A01

Subchronic benzene inhalation toxicity was studied. In experiments (1) and (2), male and female rats were exposed to 0, 25, 250, and 1250 ppm benzene vapor for 6 hr a day, 5 days a week for 13 weeks. In experiment (3), female rats were exposed to 250 ppm for 6 weeks. Primary antibody formation against sheep red blood cells (SRBC) in (1) varies too much to justify conclusions about a benzene effect. The antibody response to SRBC by the test rats in (3) is the same as that of the controls. Mitogen stimulation of spleen cells and peripheral blood cells shows a linear log benzene dose effect relation with phytohemagglutinin (PHA) stimulated male and female spleen cells in (1), and with PHA, Concanavalin A or PWM stimulated peripheral blood cells in (2). In (3), a significant reduction in PHA stimulation of peripheral blood cells from test rats is observed. Author (ESA)

**INHALATION STUDIES WITH HALOTHANE IN FEMALE RATS. PART A: TOXICOLOGICAL DATA**

L. M. Appelman and C. F. Kuper *In its* Evaluation of Immunol. Methods for Toxicity Studies in Animals: Inhalation Studies with Benzene and Halothane in Rats Mar. 1980 17 p refs

Avail: NTIS HC A07/MF A01

Halothane inhalation toxicity was studied by exposing female rats for 6 hr a day, 5 days a week to atmospheres containing 0 or 2500 ppm halothane, for 6 weeks. Mean concentration of the test compound in the atmosphere was 2506 ppm. Inhalation causes growth retardation lymphopenia and slight anemia. More urine of lower density and containing more ketones is produced. Lower glucose and higher urea nitrogen levels in the blood are observed. Higher serum alkaline phosphatase activity is noted. Higher relative liver and kidney weights and a lower relative spleen weight are recorded. Author (ESA)

**N82-24818#** Medical Biological Lab. RVO-TNO, Rijswijk (Netherlands).

**INHALATION STUDY WITH HALOTHANE IN FEMALE RATS. PART B: IMMUNOLOGICAL DATA**

O. Brocades Zaalberg and J. L. F. Gerbrandy *In its* Evaluation of Immunol. Methods for Toxicity Studies in Animals: Inhalation Studies with Benzene and Halothane in Rats Mar. 1980 10 p refs

Avail: NTIS HC A07/MF A01

The effect of exposure to halothane vapor on immunological parameters was studied by exposing female rats to 2500 ppm halothane a day, 5 days a week for 6 weeks. No effect on the primary antibody response to sheep erythrocytes is observed. The secondary antibody response to tetanus toxoid is slightly, but not significantly, lowered as is the delayed hypersensitivity reaction to tuberculin. The local antibody production to tetanus toxoid in the lung is not changed. The transformation reaction of peripheral blood lymphocytes with phytohemagglutinin or concanavalin A is slightly, but not significantly reduced. Author (ESA)

Copyright. Avail: NTIS HC A02/MF A01

The cerebral cortex was studied as a model highly sensitive to magnetic fields. Significant disturbances in the water-electrolyte balance, manifested as hydropic changes in the walls of cortical capillaries, nerve cells and their derivatives were discovered. A horseshoe electromagnet with trapezoidal tips at the poles was used to create an alternating magnetic field with a frequency of 50 Hz, which deviated by no more than 5 percent over the entire area of the magnet at a field intensity of 20 mT. The field gradient was 0.1 mT/cm. Intensity pulsation was 1.8 percent. One-time total exposures lasting 6.5 hours were employed. The experiments were run in winter on 136 male rats weighing 190-210 gm. The animals (three specimens in each experiment) were maintained unrestrained in a nonmagnetic cage which limited mobility somewhat. They were killed by decapitation after 1, 6, 12 and 24 hours and 3, 5, 7, 14, 21 and 28 days following exposure. Portions of the parietal, posterior frontal and limbic cortex were sampled as morphological equivalents of, correspondingly, the sensomtor, kinesthetic and motor analyzers and the analyzer of the internal environment. ### ELECTROMAGNETIC FIELDS

L. A. Tomashevskaya and Yu. D. Dumenskiy *In its* USSR Rept. Life Sci.: Effects of Nonionizing Electromagnetic Radiation, No. 5 (JPRS-80525) 8 Apr. 1982 p 5-8 refs Transl. into ENGLISH from Vrachebnoye Delo (Kiev), no. 7, Jul. 1981 p 98-100
Copyright. Avail: NTIS HC A02/MF A01

The biological effects of commercial frequency (CF) electromagnetic fields (EMF) as a function of intensity and time of exposure to the field are discussed. Conditions proceeding from those that actually prevail in areas where high-voltage lines pass were simulated. A chronic experiment was conucted on white rats (180 specimens) divided into groups according to intensity (E-10, 15, 20 kV/m) and modes of exposure to CF EMF (4 and 16 times a day, 5 min per session, to a total of 20 and 80 min). Biochemical processes were evaluated according to different types of metabolism participating in the body's response to CF EMF. For this purpose, we assayed urea and residual nitrogen in blood serum, blood glucose, liver glycogen, adrenal ascorbic acid, cholinesterase activity, ceruloplasmin content and saturation with transferring iron of blood serum. Studies were conducted during exposure to the field for 4 months, as well as in the aftereffect period. Author

Copyright. Avail: NTIS HC A02/MF A01

The effects of a stationary magnetic field (SMF) on EKG parameters and ion (Na, K, Ca, Mg) metabolism in blood serum and myocardial homogenate were studied. The study was conducted on 30 rabbits and 30 guinea pigs. Three-hour exposure of rabbits to SMF elicited a shift of the S-T segment on the EKG, depression of T wave, change in amplitudes of R and S waves in different directions, and after 24 and 48 h a drop of general volage as well. Thirteen out of fifteen healthy rabbits expired on the 2nd or 3rd day after the last exposure to SMF. Conclusions are presented. N.W.

### TORSO EXPERIENCED AERODYNAMIC FORCES EXPERIENCED DURING EJECTION

Arthur J. Nestle Feb. 1981 48 p refs
(AD-A098942; AFAMRL-TR-80-20) Avail: NTIS HC A04/MF A01 CSCL 06/19

The forces are momentarily unique in direction and can be of severe magnitude. One difficulty of analyzing extremity injury during emergency escape is the diversity and intensity of the aerodynamic environment the human torso experiences entering free stream flow. Aerodynamically, an appreciation of these forces, which can be resolved into positive and negative pressure locally, can be achieved from correlation of the relative likeness of anatomical segments to investigated geometric shapes (i.e., spheres, cylinders, etc.). Aerodynamic data were obtained from tests using modelled crewmembers in a five foot wind tunnel and coefficients of pressure calculated from manometer readings. These coefficients were determined for crewmember location and pitch, and yaw of trim of the aircraft from -10 to +10 degrees each, and were graphically analyzed using three dimensional computer plots. Severity, gross kinetic changes, and points of force application are described. T.M.

### PROBLEMS IN THE THERAPY OF SOMAN POISONING

O. L. Wolthuis, F. Berends, and E. Meeter Apr. 1981 27 p refs
(Contract A79/K/032)
(MBL-1981-1; TDCK-75106) Avail: NTIS HC A03/MF A01

The lack of efficacy of combined therapies, involving a cholinolytic drug and an oxime, is reviewed. Problems include rapid aging of the phosphylated acetylcholinesterase, poor reactivation of nonaged inhibited enzymes (oxime resistancy), and the predominant effect of soman on the central nervous system. Species differences and the persistence of soman in depots complicate treatment. Reactivation of only a few percent of the total amount of functional cholinesterase can save life, so enzyme aging is not serious. Oxime resistance is overcome by oximes which effectively penetrate the blood brain barrier. These oximes also have antidotal effects not based on enzyme reactivation. Author (ESA)

### EFFECTS OF IMPULSE NOISE ON HUMAN BEINGS: A PILOT STUDY ON ANNOYANCE RATINGS IN THE LABORATORY

G. F. Smoorenburg and W. H. deVries May 1981 53 p refs
(IZF-1981-9; TDCK-75523) Avail: NTIS HC A04/MF A01

Annoyance ratings for traffic, gunfire, pile driving and white noise were recorded by young male adults on a numerical scale. The noises were presented at 49, 56, 63, and 70 dbA for 5 min. Results show no significant differences in ratings for the noises, but when results are combined with those of other researchers, significant interaction between the effects of different levels and of different noises is found. At 63 dbA, ratings for traffic, gunfire and pile driving noise are about the same, but at 49 dbA gunfire and pile driving noise are rated more annoying than traffic noise. The white noise bursts are rated higher than gunfire and pile driving noise. Author (ESA)

### INDIVIDUAL DIFFERENCES IN DUAL TASK PERFORMANCE Final Report, 1 Apr. 1977 - 31 Mar. 1980

Marcy Lansman and Earl Hunt 10 Jun. 1981 35 p refs
(Contract N00014-77-C-0225)
(AD-A110768) Avail: NTIS HC A03/MF A01 CSCL 05/10

The topic of the research was individual differences in dual task performance. It addressed the basic question: Is performance on multi-component tasks predicted by performance on the individual components performed separately? In the first series of experiments, we used a dual task involving memory and verbal processing components to predict a psychometric measure of verbal ability. Single and dual task performance were found to be highly correlated. The two types of measures predicted performance on the criterion verbal ability measure equally well. GRA

### A RATIONALE FOR THE DEVELOPMENT OF CUT-OFF SCORES

I. H. Veling Feb. 1981 19 p refs
(IZF-1981-3; TDCK-75517) Avail: NTIS HC A02/MF A01

How many response errors a subject is allowed before being defined as a nonmaster is considered. A model which defines the probability that masters and nonmasters respond correctly to an item, and that an individual is a master of that item, is presented. Cut-off scores must be greater than or equal to the test score of the X percent point of the binomial distribution with parameters M and m sub j (j = 1, 2,..., M), where X is a value close to zero, M is a set of bivalued items scored 1 whenever

an item is answered correctly and j is an item. The model correctly determines the cut-off score in a traffic knowledge test.

**STRESS, INFORMATION PROCESSING AND DIVING**
P. G. A. M. Jorna Apr. 1981 27 p refs
(Contract A79/KM/030)
(IZF-1981-4; TDCK-75518) Avail: NTIS HC A03/MF A01

The influence of experience on diver performance was investigated. Divers selected target letters from a series auditorily presented with 2 second intervals. Additional selective counting of these letters was required. Test dives were made at three periods in a training course, and performance was compared with an experienced group. Performance improves with training. Information selection is not influenced by experience, but the use of this information is less optimal for inexperienced divers. Physiological measures (heart rate, 0.10 Hz component, respiration) show a decreased response to the environment as training processes. Experienced divers show stable responses to being underwater.

**DISTRACTION IN VISUAL SEARCH**
A. H. Wertheim Jun. 1981 17 p refs
(Contract A78/KL/081)
(IZF-1981-7; TDCK-75522) Avail: NTIS HC A02/MF A01

The search time lengthening effect of distractor stimuli in a visual search task, e.g., spotting ground targets from the air, was studied. Subjects sought target light spots on a screen with pseudorandomly distributed distractors. Six distracting stimuli within a field of 600 nontarget stimuli lengthen search time by 2.5 sec. When the number of distractor stimuli increases, this distraction effect changes into a search time shortening effect. Distraction is not related to the brightness or color qualities of nontarget stimuli. Distraction is affected by the foreground-background configuration of the visual field. This configuration depends on the expectancy of the observer with respect to the nature of the target.

**RECOGNITION EXPERIMENTS WITH THERMAL IMAGES. PART 4: EFFECT OF SIGNAL TO NOISE RATIO**
S. Mangouri and A. vanMeeteren Jun. 1981 14 p refs
(Contract A76/KL/080)
(IZF-1981-8; TDCK-75520) Avail: NTIS HC A02/MF A01

The effect of pictorial noise on the recognition of thermal images of military vehicles was studied. Thermographs were displayed indoors in a simulation, using a flying spot scanner with variable scan line density and variable amounts of noise added electronically in the scanning circuit. In each session, 69 pictures were presented in random order with the same scan line density and the same signal to noise ratio. Subjects were asked to identify the vehicles from 6 alternatives. Practically no effect is found for signal to noise ratios (per pixel, per 0.1 sec) higher than 20, while there is only moderate decay when the ratio is reduced to 5. This decay is approximately the same over the investigated range of scan line densities. Author (ESA)

**SEARCH TIMES IN TWO-DIMENSIONAL TABLES**
W. A. Wagenaar and J. M. A. Fokkens Jul. 1981 8 p
(IZF-1981-10; TDCK-75524) Avail: NTIS HC A02/MF A01

The relation between search time in two-dimensional tables, e.g., timetables, and the number of rows/columns and alphabetical ordering was investigated. Subjects compared the table entry for a target with the digit typed beside the table. Results show that search time can be predicted from a weighted summation of the number of rows and columns. The weights are 230 msec for randomly ordered rows/columns, and 130 msec when rows or columns are alphabetized.

**PLANT DIVERSITY TO SUPPORT HUMANS IN A CELSS GROUND BASED DEMONSTRATOR Final Report, 1 Jul. 1979 - 1 Oct. 1981**
J. M. Howe and J. E. Hoff 1 Oct. 1981 49 p refs
(Grant NsG-2401)
(NASA-CR-168918; NAS 1.26:168918) Avail: NTIS HC A03/MF A01 CSCL 06K

A controlled ecological life support system (CELSS) for human habitation in preparation for future long duration space flights is considered. The success of such a system depends upon the feasibility of revitalization of food resources and the human nutritional needs which are to be met by these food resources. Edible higher plants are prime candidates for the photoautotrophic components of this system if nutritionally adequate diets can be derived from these plant sources to support humans. Human nutritional requirements information based on current knowledge are developed for inhabitants envisioned in the CELSS ground based demonstrator. Groups of plant products that can provide the nutrients are identified.

(NASA-CP-2233; A-8842; NAS 1.55:2233) Avail: NTIS HC A03/MF A01 CSCL 06K

The general processes and controls associated with two distinct experimental paradigms are examined. Specific areas for research related to biotic production (food production) and biotic decomposition (waste management) are explored. The workshop discussions were directed toward Elemental cycles and the biological factors that affect the transformations of nutrients into food, of food material into waste, and of waste into nutrients were discussed. To focus on biological issues, the discussion assumed that (1) food production would be by biological means (thus excluding chemical synthesis), (2) energy would not be a limiting factor, and (3) engineering capacity for composition and leak rate would be adequate.

**PREDICTING PILOT OPINION RATINGS OF FLYING QUALITIES OF HIGHLY CONTROL AUGMENTED AIRCRAFT**

**USING AN OPTIMAL PILOT MODEL M.S. Thesis**
Randall M. Enright 8 Dec. 1981 172 p refs
(AD-A111136; AFIT/GAE/AA/80D-3) Avail: NTIS HC A08/MF A01 CSCL 05/8

A computer simulation was contructed using optimal control theory to model the human pilot. This optimal pilot model was used to evaluate highly control augmented aircraft and predict the human pilot opinion rating of its flying qualities. Eight aircraft/control system configurations were evaluated twice by the model using two different sets of initial conditions. The performance indices for each of the configurations were plotted and compared to a plot of the human pilot ratings of the same configurations. Variances were noted in the relative positioning of the performance ratings and the relative positioning of the pilot opinion ratings, and the mean difference in ratings between the performance index predictions and the pilot ratings varied with the initial conditions of the model (the initial conditions of the actual flight tests were unknown). The RMS error in the state response to system noise for each configuration was also plotted and compared to the pilot ratings. DOE

**DRIVING EXPERIENCE AND TASK DEMANDS IN SIMULATOR AND INSTRUMENTED CAR: A VALIDATION STUDY Progress Report**
G. J. Blaauw 1980 33 p refs
(IZF-1980-9; TDCK-75108; PR-2) Avail: NTIS HC A03/MF A01

The absolute and relative validity of a fixed base vehicle simulator during straight road driving were evaluated in terms of system performance and driver behavior. Inexperienced and experienced drivers performed lateral and longitudinal vehicle control in the simulator and in an instrumented car on the road. Each control was varied with a free and forced accuracy instruction resulting in four levels of task demand. Sequence effects between simulator and instrumented car, and training effects on each system, were studied. Overall results show a good absolute and relative validity for longitudinal vehicle control; lateral vehicle control shows good relative validity. Absolute validity is lacking in lateral control due to a worse perception of lateral translations (absence of kinesthetic feedback). Yaw rotations are perceived in the simulator quite well. The simulator discriminates between inexperienced and experienced drivers better than the instrumented car. Author (ESA)

All medially related activities of the Space Transportation System 2 flight are described, ranging from preflight to postflight. Several medical problems occured during the flight. Their was marginal operation on-board potable water system caused by a malfunctioning fuel cell. Work and rest cycles by the crew were altered to maximize the scientific data acquisition. Inadequate time was allocated for food preparation and consumption. There was low water intake by the crew because of the water shortage. R.J.F.

**THE EFFECTS OF SOME DRUGS ON THE SURVIVAL OF RATS IN VARIOUS STAGES OF HEMORRHAGIC SHOCK**
M. Wijnans and P. vanEck Jun. 1981 30 p refs In DUTCH; ENGLISH summary
(Contract A76/K/095)
(MBL-1981-7; TDCK-75204) Avail: NTIS HC A03/MF A01

Possible treatments of rats in hemorrhagic shock were studied in order to compare simple shock treatments techniques that can be applied by nonmedical personnel. Three procedures were followed in order to obtain three states of shock: (1) bleeding until a certain low blood pressure resulted, producing nearly 100% death of the rats (2) similar bleeding followed by reinfusion of the shed blood after a certain interval, resulting in nearly 100% survival, and (3) a Wiggers type of transfusion resistant shock, causing 80% mortality within 24 hr in spite of the reinfusion of all the shed blood. When the required state of shock was obtained, various treatments were immediately applied. The administration of a saline solution in the stomach following procedure (1) has little or no effect on the survival time, but when injected intraarterially it is very effective. Pharmacological agents (dramine, octapressine, dexamethasone, atropine) have either no effect or make the situation worse. Author (ESA)

Nutritional and dietic studies in space flight feeding are highlighted. Mineral content in space rations was studied with respect to prevention of ill effects due to hypokinesia. The diets of the crews of the Salyut Space Station were examined for nutritional benefits. Other topics covered include: bacterial activity in weightlessness; the concentration of amino acids in various muscles during prolonged space flight; the adaptivity of man to stressful conditions in the spacecraft cabin; and the functional stability of the cardiovascular and digestive systems during and after long duration space flight.

The nutrition factor in life support systems (LSS) for spacecraft crews consists of the food allowance and equipment to store foods, preparation and intake of food. The main purpose of this factor is to keep a level of vital functions in cosmonauts that would assure the successful implementation of flight programs. The distinctions of outfitting nutrition elements depend on both the duration of space missions and principles of construction of LSS as a whole. The space diets used in flight of five permanent Salyut-6 crews were reviewed. Cosmonauts complained that sterile canned foods became distasteful; due to this, a space diet consisting of 65% freeze-dried foodstuffs was developed and tested. T.M.

**STATE OF DIGESTIVE SYSTEM FOLLOWING LONG-TERM SPACE FLIGHTS**

K. V. Smironov, G. D. Syrykh, V. I. Legenkov, L. G. Goland-Ruvinova, I. L. Medkova, and L. I. Voronin *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 23-28 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 19-22

Avail: NTIS HC A08/MF A01

In the crewmembers of four Salyut-6 long-term flights, enzyme excretory function of the gastro-intestinal tract was investigated. These studies included: gastric proenzyme, pepsinogen, and pancreatic enzymes, amylase and lipase, in blood and urine, trypsin in blood, intestinal enzymes, invertase and glycyl-L-leucine dipeptidase in feces, and lipids in feces. The results obtained demonstrated a correlation between changes in enzyme excretion and space flight duration and profile. After the 140- and 175-day flight the most marked changes in the digestive organs were seen; they manifested as simultaneous increase in secretory function of the stomach and the pancrease. However, after the 185-day flight, in which advanced countermeasures were used, the above changes were less distinct. Author

**EFFECTS OF 1 ALPHA-HYDROXYCHOLECALCIFEROL AND DIFFERENT AMOUNTS OF PHOSPHORUS IN FOOD ALLOWANCE ON SOME PARAMETERS OF PHOSPHORUS AND CALCIUM METABOLISM IN HYPOKINETIC RATS**

N. V. Blazheyevich, V. B. Spirichev, A. S. Ushakov, M. S. Belakovskiy, A. L. Pozdnyakov, and I. N. Sergeyev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 46-54 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 34-40

Avail: NTIS HC A08/MF A01

The exposure of rats to hypokinesia and a phosphorus-enriched diet (Ca:P = 1:3) was accompanied by hypocalciemia, hyperphosphatemia, calcium losses from bones and formation of calcificates in the kidneys. The decrease of the phosphorus content in the diet (Ca:P = 1:0.5-1:1) prevented these disorders. The administration of 1 OHD3 at a dose of 0.025 micrograms/day arrested hypokinesia-associated hypocalciemia and bone changes. The administration of 1 alpha OHD3 together with a high phosphorus consumption enhanced nephrolithiasis and induced aortal mediacalcinosis in hypokinetic rats. These data indicate that phosphorous consumption should be reduced in order to prevent disorders in phosphorus-calcium metabolism during hypokinesia. They also suggest that administration of 1 alpha OHD3 may be hazardous in the case of excessive phosphorus consumption. Author

**INFLUENCE OF LEVEL OF MINERALIZATION OF DESALINATED, HIGH QUALITY WATER OF THE HYDROCARBONATE CLASS ON FUNCTIONAL STATE OF MALE WHITE RAT GONADS**

O. I. Balashov, A. B. Sysoyev, and A. V. Rodnikov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 55-61 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 40-45

Avail: NTIS HC A08/MF A01

As known, the salt content in the potable water has a gonadotropic effect, the level of which being in agreement with the traditional norm. However, within the normal limits one can distinguish better or worse functional manifestations. It is shown that statistical treatment of the data, using the Student t-test, is of low efficiency because it neglects the ratio between groups. Of greater efficiency is the statistical treatment based on the domineering order. Proceeding from the theoretical speculations and experimental results, potable water with the mineral content of 250 mg/lambda should be regarded as optimal. Author

**SOME PHYSIOLOGICAL AND BIOCHEMICAL FEATURES OF CELLS OF CARROT GALL DEVELOPED IN WEIGHTLESSNESS**

M. G. Tairbekov, L. A. Voronkov, and N. A. Guzhova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 62-67 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 45-48

Avail: NTIS HC A08/MF A01

The results of experiments with the carrot tissues infected with Agrobacterium tumefaciens flown onboard the biosatellite Cosmos-1129 are presented. Postflight, the respiratory activity of tumor cells was determined and K(+) and Na(+) permeability of cell membranes was measured. The resulting data give evidence that in weightlessness the development of the carrot gall tumor is accompanied by changes in the above physiological and biochemical parameters. The changes are, however, within the physiological limits, leading to no pathologies of the whole cell. T.M.

### FUNCTIONAL STATE OF RAT GASTROINTESTINAL TRACT ORGANS FOLLOWING FLIGHT IN COSMOS-1129 BIOSATELLITE

K. V. Smironov, L. G. Goland-Ruvinova, N. P. Goncharova, O. V. Zhiznevskaya, I. L. Medkova, N. M. Nikolayeva, R. A. Pechenkina, and A. N. Petrusenko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 62-73 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 68-73

Avail: NTIS HC A08/MF A01

The enzyme-excretory and motor functions of the gastrointestinal tract of rats flown for 18.5 days onboard the biosatellite Cosmos-1129 were studied. Immediately postflight, the pepsin synthesis decreased and the dipeptide parietal hydrolysis increased. At R+6, the activity of the enzymes responsible for the cavitary and parietal hydrolysis of lipids significantly grew and that of the enzymes involved in protein hydrolysis fell. At R+30, the carbohydrate hydrolysis was inhibited and the activity of lipolytic enzymes enhanced markedly. The amplitude and rhythm of stomach biopotentials were disbalanced. The so-called immobilization stress of intact rats brought about activation of lipase, monoglyceridyl lipase, monoglyceridyl lipase, dipeptidase and inhibition of amylase and invertase. The immobilization exposure of flight rats caused inhibition of the membrane hydrolysis of proteins and carbohydrates and lack of the pancreatic reaction. Author

### NEUROPHYSIOLOGICAL CHARACTERISTICS OF SENSORIMOTOR CORTEX OF RATS SUBMITTED TO EARLY MOTOR DEPRIVATION AND CONDITIONING

I. A. Shimko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 93-101 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 64-70

Avail: NTIS HC A08/MF A01

Young rats, beginning with the age of 1 month, were kept in small size cages for 3 months, i.e., were exposed to 3-month motor deprivation. This exposure caused a modulating effect of a diminished activity of neuronal populations in the sensorimotor cortex which manifested as a prolongation of the latent periods of primary responses and recovery cycles of excitation of the neuronal populations generating the responses. The differences in the opposite changes in the sensorimotor cortex of the young animals that developed following prolonged deprivation and training of similar duration were seen in the parameters of excitation recovery cycles rather than in the latent periods. Both early motor deprivation and training did not influence the heterochronic development, emergence and subsequent attainment of the maximum amplitude of components of the testing primary response in the process of a gradual increase of the stimulus-to-stimulus interval. Author

**ROLE OF POLARIZATION AND RESONANCE IN ASSESSING THE BIOLOGICAL EFFECTS OF ELECTROMAGNETIC RADIATION**
A. A. Galkin *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 125-130 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 84-87

Avail: NTIS HC A08/MF A01
The dosimetric concept of measurements of electromagnetic radiations (EMR) during irradiation of biological objects can be realized by methods of mathematical modeling of EMR interactions with biological objects, which can be represented as an image of the human body as a uniform ellipsoid of revolution. The efficient surface of EMR absorption for the models shows a marked resonance dependence on the radiation frequency. The ratio of the largest to the smallest axes of the ellipsoid of revolution can be used as resonance criterion. Besides, radiation polarization needs to be taken into consideration. The frequency dependence of the efficient absorption surface for three major types of radiation polarization is discussed. An applicability of the calculation method to the evaluation of the EMR absorbed dose rate is demonstrated. Author

**SYMPATHOADRENAL SYSTEM OF COSMONAUTS FOLLOWING 7-DAY FLIGHTS**
N. A. Davydova and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 131-136 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 88-91
Avail: NTIS HC A08/MF A01
The sympathoadrenal system (SAS) is an important element of neurohumoral regulation, and for this reason it is particularly important to study the activity of its hormonal and mediatory elements, which is an indicator of stress reactions, during space flights when the human body is exposed to extreme factors, and the success of the flight depends largely on man's capacity to adjust to these conditions. A number of researchers examined SAS activity in cosmonauts following flights of various duration (1-4); however, the results do not reflect adequately the changes occurring in the SAS due to the fact that only some aspects of catecholamine (CA) metabolism were studied. Out objective here was to determine whether a stress reaction could occur following 7-day space flights by using the complete spectrum of parameters characterizing SAS activity. Author

**VENOUS PRESSURE AS AN INDICATOR OF CIRCULATING BLOOD VOLUME**
A. S. Nekhayev, V. A. Degtyarev, and V. S. Bednenko *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 16, No. 2, Mar.-Apr. 1982 p 137-140 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), v. 16, no. 2, Mar.-Apr. 1982 p 91-92

Avail: NTIS HC A08/MF A01
The reduction in circulating blood volume (CBV) due to fluid loss in weightlessness can be viewed as one of the defense mechanisms that prevents development of hypertension and hypervolemia in the intrathoracic and cranial parts of the circulatory system. However, upon returning to Earth's gravity, this change in CBV could be the cause of decline in orthostatic stability of cosmonauts. For this reason, it is necessary to monitor CBV dynamics in the postflight period, particularly with correction of fluid-electrolyte balance. The possibility of indirect evaluation of CBV, in particular, by means of the indicator of venous pressure in the system of jugular veins measured indirectly is explored. Author

(LUNFD6/NFRA-1013/1-21/(1981);
LUMEDW/MERI-1013/1-21/(1981)) Avail: NTIS (US Sales Only) HC A07/MF A01; DOE Depository Libraries
A Monte Carlo code was constructed and used to simulate the energy distribution of scattered photons obtained in various in vivo X-ray fluorescence measurements. The structure of this distribution was investigated and discussed. Studies of the response function of the Ge-detector used made it possible to

convert the calculated scatter spectra to pulse height distributions. These studies are valuable tools in designing in vivo X-ray fluorescence measurements. In vivo X-ray fluorescence measurements were used for quantitative non invasive measurements of the concentration of iodine containing contrast media in rabbits without the use of blood or urine sampling. The biological half life of the contrast medium in the soft tissue part of the nose (measured in vivo) was similar to that in serum (measured in vitro) when determined in the period 2 to 4 hours after injection. The method can be used for clinical evaluation of kidney function. DOE

Experimental research on shock is surveyed. This research is urgently needed since the optimal treatment of shock patients is still a matter of discussion, while the occurrence of irreversible shock is still a serious problem. The research is partly aimed at a study of shock models, concerning different aspects of irreversible shock, i.e., tourniquet shock, hemorrhagic shock, endotoxin shock and intestinal ischemia shock. A model of shock kidney is studied as well as possibilities of emergency treatment to prevent the occurrence of shock and some aspects of diver's disease. The evaluation of certain forms of shock treatment is being initiated. Author (ESA)

**THE EFFECT OF NOISE-INDUCED HEARING LOSS ON THE ABILITY TO UNDERSTAND SPEECH**
J. A. P. M. deLaat and G. F. Smoorenburg Jul. 1981 17 p refs In DUTCH; ENGLISH summary
(Contract A76/K/105)
(IZF-1981-11; TDCK-75525) Avail: NTIS HC A02/MF A01

Speech reception thresholds (50% sentence intelligibility) were measured for 22 persons (44 ears) with noise induced hearing loss (NIHL) and for 7 persons with normal hearing. The speech reception thresholds were measured in quiet and also in ambient noise at levels of 25, 40, 55, and 70 dbA. In ambient noise, an average speech reception threshold for the NIHL group was about 4 db higher then the average threshold for normals. The 4 db increase of signal to noise ratio required to keep the sentence score at 50% for the NIHL group can also be expressed in a loss of sentence score when the sentences are presented at the same signal to noise ratio to normals and NIHL group. For a signal to noise ratio at which normals just score 100%, the score for the NIHL group is only 33%. The hearing loss criterion of 25 db averaged across the losses at 500, 1000 and 2000 Hz implies a severe handicap to understand speech, in particular in noisy environments. In view of this handicap, hearing loss in excess of 15 db averaged across 1000, 2000 and 3000 Hz can not be tolerated. Author (ESA)

Peak sound pressure levels were measured at several distances around the muzzles of four types of towed howitzers fired with different charges. For small charges, peak levels were determined also at the ear of the gunner and the other crew positions. The effective duration of each sound impulse was determined. On the basis of peak level and duration, the preferred number and the maximum number of firings not to be exceeded were calculated for three kinds of hearing protection in order to limit the risk of a hearing loss of 15 db or more averaged across 1.2 and 3 kHz to 5% (preferred value) or 10% (maximum). For some howitzers the A-weighted impulse level was measured and can be used to estimate annoyance from firing noise. Author (ESA)

**STATISTICAL EXAMINATION OF HEARING LOSS DUE TO GUNFIRE NOISE AND INDUSTRIAL NOISE: CONSEQUENCES FOR SCREENING AUDIOMETRY WITH FIXED FREQUENCIES**
J. A. P. M. deLaat and G. F. Smoorenburg Sep. 1981 22 p refs In DUTCH; ENGLISH summary
(Contract A78/K/095)
(IZF-1981-20; TDCK-75531) Avail: NTIS HC A02/MF A01

The reliability of screening audiometry with fixed frequencies as compared to screening audiometry with a continuously sweeping frequency was investigated. The investigation was based on two data sets: 528 audiograms of 278 persons exposed to gunfire noise and 1306 audiograms of 679 persons exposed to industrial noise. Looking for gunfire noise dips of 30 db or greater at any frequency, the highest score is obtained with a screening frequency of 6300 Hz and a screening level of 25 db. The best choice for gunfire noise dips is 5000 Hz and 6300 Hz. For dips due to industrial noise, the best single screening frequency is 4000 Hz. For two screening frequencies the best choice is 4000 and 8000 Hz. The data sets show that two to four screening frequencies are sufficient and that screening levels should be chosen 5 to 10 db below the target level. Author (ESA)

**PERFORMANCE MEASUREMENT AND NAVY'S TACTICAL AIRCREW TRAINING SYSTEM Final Technical Report, Mar. - Apr. 1981**
Gerald R. Stoffer Sep. 1981 39 p refs
(AD-A110669; NAVTRAEQUIPC-IH-333) Avail: NTIS HC A03/MF A01 CSCL 05/9

The development and use of the Tactical Aircrew Training System (TACTS) as a means for training advanced air combat skills are described. Pilot performance measurement capabilities of the TACTS are reviewed in terms of their value for pilot selection, aircrew training, assessment, and simulator design. Several approaches and methods used to conceptualize and measure air combat maneuvering (ACM) performance are presented. Limitations in existing TACTS performance measurement capabilities are illustrated in terms of several psychometric, training, and TACTS operational user feasibility requirements for a system of performance measurement. It is concluded that while the existing TACTS represents a highly advanced aviation engineering technology that can provide extremely valuable training, that same technology has largely ignored the functional requirements for a system of human performance measurement. Improvements in the TACTS performance measurement capabilities will improve its training value even further. Author (GRA)

A question of great concern in decision research is the extent to which the strategies used by an individual in making a judgment or choice are invariant across task environments. This paper reviews research showing that information processing in decision making, as in other areas of cognition, is highly contingent upon the demands of the task. Theoretical frameworks for handling task and context effect are explored: (1) Cost/benefit principles; (2) Perceptual processes; and (3) Adaptive production systems. Both the cost/benefit and perceptual frameworks are shown to have strong empirical support. Both frameworks, however, also have unresolved conceptual problems that are discussed. The adaptive production system framework has less direct support, but has the desirable property that it contains elements of both of the other frameworks. The question of how the different theoretical frameworks might be integrated is explored. Author (GRA)

**PART 2: EFFECT OF RASTER FREQUENCY** In DUTCH; ENGLISH summary
A. vanMeeteren and J. M. Schipper 1980 21 p refs
(Contract A76/KL/060)
(IZF-1980-14; TDCK-75109) Avail: NTIS HC A02/MF A01

The effect of raster frequency in recognition experiments with thermal images was investigated. Experiments, determining the recognition chance as a function of scan line density, are described. For raster scanned images, the raster frequency is the dominant image quality factor. The modulation transfer functions of sampling aperture and display spot are of minor significance with regard to recognition of relevant objects in practical situations. The probability of recognition of a set of thermal pictures was measured psychophysically as a function of the raster frequency. When averaged over 6 objects in different orientations and with different degrees of warming up, the critical raster frequency required for 70% correct identification turned out to be 1.7 lines per meter on the target. However, this critical raster frequency differs considerably for different objects as well as for different appearances of the same object. It makes no sense to normalize the critical raster frequency relative to object dimensions. The prediction of the useful range of actual thermal imaging devices is outlined, starting from experimental data. Author (ESA)

The adjustment of contrast and luminance of displays for thermal imaging devices is discussed, with reference to adapting the dynamic range of the display to the dynamic range of the signals. Two questions are discussed with regard to this adaptation: the recognizability of thermal images affected if the dynamic range of the display is not fully utilized and advantages in displaying part of the signal range, e.g., colder regions or warmer regions, with enhanced contrast. Experiments demonstrate the best strategy utilizes both the signal and the display dynamics as completely as possible. Author (ESA)

**THREE COMPUTER ROLES IN A CYBERNETIC LEARNING SYSTEM**
*In its* APU Man-Computer Studies Group Seminar Proc. 1 Jun. 1980 p 7-17 refs

Avail: NTIS HC A03/MF A01

The importance of subject matter or knowledge representation in computer assisted instruction CAI is discussed. The components of such a learning system are identified as the learner, subject matter representation, subject matter expert, and the tutor. Within this framework, three roles that a computer can play in a learning system are discussed. The location of the system tutor, the component which mediates the learning process, is shown to be directly related to the sensitivity of the computer to the learner. A pre-CAI system where the computer is used as a simulator, a conventional CAI system, and an intelligent CAI system where the computer contains the tutor are outlined. Author (ESA)

**THE REPRESENTATION OF KNOWLEDGE: GOLDSTEIN'S GENETIC GRAPH**
*In its* APU Man-Computer Studies Group Seminar Proc. 1 Jun. 1980 p 19-31 refs

Avail: NTIS HC A03/MF A01

The genetic graph is a computer based data structure that holds a knowledge representation, i.e., part of a program combining the technology of artificial intelligence with computer aided instruction (CAI). The structure emphasizes the representation of the evolution of expertise from the perspective of the learner with respect to intelligent CAI. An epistemology is established as the connective structure of the graph. The links between nodes themselves represent learning processes, such as generalization, analogy and refinement. As a result, the genetic graph allows a powerful modelling facility, i.e., the coaching system is more sensitized to development of the learner's expertise, this being achieved by the graph's capacity to yield information about the learner's knowledge state, his learning style and his route through the syllabus. **COLD WEATHER GOGGLES. 1: OPTICAL EVALUATION Interim Report**
S. M. Luria, David F. Neri, Jo Ann S. Kinney, and Helen M. Paulson 19 Jan. 1982 34 p refs
(M0095PN001)
(AD-A111333; NSMRL-970) Avail: NTIS HC A03/MF A01 CSCL 06/17

To compare the utility of a dozen protective goggles for the cold, their transmittance of harmful radiation, optical quality, resistance to fogging, and comfort were measured. The transmittances were discussed in terms of thresholds for damage to the eye from various bands of light radiation. The optical characteristics were evaluated against military specifications for aviators' visors. All the goggles except one screened out enough UV at sea level, and all but two screened out enough of the visible and infrared radiation. There were wide variations in optical quality, resistance to fogging, and comfort. A set of specifications was drawn up to meet the various requirements, but it was concluded that one set of goggles was unlikely to be satisfactory for the wide range of conditions which would be encountered. **OPERATOR PERFORMANCE ON TWO OFFICE DATA ENTRY SYSTEM TESTBEDS: PRELIMINARY ANALYSES Special Report, 1978 - 1979**
Eleanor R. N. Robinson, John S. Malone, and Richard W. Obermayer Feb. 1982 28 p refs
(AD-A111535; NPRDC-SR-82-16) Avail: NTIS HC A03/MF A01 CSCL 05/8

This effort tested the effectiveness of two computerized data entry systems designed to improve operator efficiency and reduce the number of errors in Navy personnel records. Data were collected on operator performance times and the quantities of errors made using (1) a stand-alone system; and (2) a distributed data entry system that used an off-site computer in tandem with an on-site microprocessor. Preliminary analyses of data obtained were conducted to assess user acceptance so that modifications, if needed, could be implemented before the system was installed. Results showed that the distributed office data entry system provided a distinct advantage over the self-contained system in reducing errors in the information system without adding to the office workload. Also, using this distributed system to make changes resulted in a 75 percent time savings over the manual method. The time saved in making changes would be, by itself, a significant factor in evaluating the cost effectiveness of systems employing computer data bases. Author (GRA)

An analytical model of a class of RF intrusion sensor systems was constructed. The constituents of the model are: a slotted coaxial cable laid circularly on the ground, an electromagnetic scatterer intended to simulate a human frame target in the vicinity of the cable and an antenna near the center of the circular configuration. Using the concept of a general electromagnetic field as a superposition of plane-wave fields ('plane-wave spectral representation of fields'), calculations were made of: (a) the fields from the cable slots as if the cable were in free space; (b) the effect of ground reflections on the fields were from the slots; (c) the fields of the waves scattered from the human frame target directly toward the antenna in response to the incident wave fields (a) plus (b); and (d) the effect of ground reflections on the scattered wave fields. These calculations were programmed for the VAX computer and some numerical results are presented for various orientations and positions of the human frame target. Author (GRA)

(DA Proj. 3E1-62777-A-878)
(AD-A110554; USARIEM-M-4/82) Avail: NTIS HC A02/MF A01 CSCL 06/17

Water-cooled, air-cooled and ambient air ventilated auxiliary cooling vests were evaluated in a hot-wet climate (HW) (35 C, 75% rh) and a hot-dry environment (HD) with additional infrared radiation (T sub a = 49 C, 20% rh, 68 C black globe temperature). Twelve subjects dressed in full chemical warfare combat uniforms underwent 120 min of heat exposure in each combination of climate and cooling vest except for the hot-dry environment and ambient-air vest. During each exposure, total exercise time was 20 min and rest time 100 min. This resulted in a mean time weighted metabolic rate of 180 W. No significant differences were found between the air or the water-cooled vests in either the HD or HW climates. It was concluded that an air-cooled vest can be used with the same efficiency as a water-cooled vest. In contrast, the ambient-air vest was shown to have a low effectiveness in HW and to be dangerous in a HD climate. GRA

Statistical examination of hearing loss due to gunfire noise and industrial noise: Consequences for screening audiometry with fixed frequencies [IZF-1981-20] N82-25785

AUDIOMETRY
Statistical examination of hearing loss due to gunfire noise and industrial noise: Consequences for screening audiometry with fixed frequencies [IZF-1981-20] N82-25785

AUDITORY DEFECTS
A preliminary study on noise induced hearing loss in serving aircrew of Indian Air Force A82-32209
Significance of the dehydration rate of the inner ear in the choice of method of surgical intervention in the endolymphatic system in Meniere's disease A82-34473
Hormone levels in the blood of patients with Meniere's disease and cochleovestibulopathies A82-34475
The effect of noise-induced hearing loss on the ability to understand speech [IZF-1981-11] N82-25783
Statistical examination of hearing loss due to gunfire noise and industrial noise: Consequences for screening audiometry with fixed frequencies [IZF-1981-20] N82-25785

AUDITORY PERCEPTION
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program basic research [AD-A111057] N82-24827
The effect of noise-induced hearing loss on the ability to understand speech [IZF-1981-11] N82-25783

AUDITORY TASKS
Stress, information processing and diving [IZF-1981-4] N82-24829

AUTOCATALYSIS
A theory for the origin of a self-replicating chemical system. II - Computer simulation of the autogen A82-33287

AUTOMATIC CONTROL
Automatic system for study and measurement of vibration parameters affecting human body A82-33765
A survey of vibration control methods A82-33768

AUTOMOBILES
Driving experience and task demands in simulator and instrumented car: A validation study [IZF-1980-9] N82-24830

AUTONOMIC NERVOUS SYSTEM
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task A82-32005

B

BACK INJURIES
Mechanism of vertebral fracture in the F/FB-111 ejection experience A82-32004

BACTERIA
Taxonomic relations between archaebacteria including 6 novel genera examined by cross hybridization of DNAs and 16S rRNAs A82-33276
Solar bacterial biomass farm for space vehicles A82-33095
Magnetic-field effect on photophysical processes in the light-harvesting pigment apparatus of purple photosynthetic bacteria A82-34917
Some physiological and biochemical features of cells of carrot gall developed in weightlessness N82-25764

BACTERICIDES
A hygienic assessment of the possibility of using 1,3-dichloro-5,5-dimethylhydantoin for disinfecting drinking water A82-34694

BACTERIOLOGY
Deep-sea bacteria - Isolation in the absence of decompression A82-32880
Some physiological and biochemical features of cells of carrot gall developed in weightlessness N82-25764

BAILOUT
Torso experienced aerodynamic forces experienced during ejection [AD-A098942] N82-24823

BED REST
Induced venous pooling and cardiorespiratory responses to exercise after bed rest A82-32842

BEHAVIOR
Contingent decision behavior: A review and discussion of issues [AD-A111655] N82-25787

BENZENE
Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats [NBL-1980-4] N82-24814
Inhalation studies with benzene in rats. Part A: Toxicological data N82-24815

BENZENE POISONING
Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats [NBL-1980-4] N82-24814
Inhalation studies with benzene in rats. Part B: Immunological data N82-24816

BIFURCATION (BIOLOGY)
Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation A82-32880

BINOCULAR VISION
A computational model of binocular depth perception A82-34830

BIOACOUSTICS
Velocity and attenuation of sound in arterial tissues A82-32423

BIOASSAY
Elemental analysis of samples of biological origin relative to their protein content by means of charged particle bombardment [KFKI-1981-26] N82-25752

BIOASTRONAUTICS
Space biology and medicine A82-34695
USSR report: Space biology and aerospace medicine, volume 16, no. 2, March - April 1982 [JPRS-80822] N82-25754
Effect of hypokinesia on man's nutritional status N82-25760

BIOCHEMISTRY
Synthesis of phosphatidylcholine under possible primitive earth conditions A82-33285
Lipid peroxidation and retinal damage under stress A82-34682

BIOCONTROL SYSTEMS
Psychosomatic self-regulation - An effective method for sustaining pilot work capacity during a prolonged flight A82-33727
Regulation of the functional activity of stem cells which are the precursors of granulomonopoiesis by polypeptide thymic and bone marrow factors A82-34684
The nervous regulation of the liquid state of the blood and its coagulation A82-34697

BIODYNAMICS
Man under vibration: Suffering and protection --- Book A82-33751
Effect of base oscillations on the human skeletal muscle and joint forces in a standing posture A82-33754
Mechanoreceptor systems of the organism from the viewpoint of vibrational biomechanics A82-33755

Immediate effects of vibration transmitted to the hand
A82-33756

The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests
A82-33760

Non-linear effects connected with the spatial vibrations of biomechanical systems
A82-33763

BIOENGINEERING

Development of guayule (parthenium argentatum) [NASA-CR-168926]
N82-24812

BIOGEOCHEMISTRY

Pyrolysis of Precambrian kerogens - Constraints and capabilities
A82-33288

BIOLOGICAL EFFECTS

The nature of radiation damage of haemopoietic stem cells under continuous irradiation at low dose rate
A82-33600

The organism and magnetic fields
A82-34696

The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity
A82-34768

Biotropic parameters of magnetic fields
N82-24810

Controlled ecological life support system - biological problems [NASA-CP-2233]
N82-24836

Role of polarization and resonance in assessing the biological effects of electromagnetic radiation
N82-25775

Sympathoadrenal system of cosmonauts following 7-day flights
N82-25776

Inquiry of field experience with caps for the Royal Dutch Army [IZF-1981-21]
N82-25799

BIOLOGICAL EVOLUTION

Taxonomic relations between archaebacteria including 6 novel genera examined by cross hybridization of DNAs and 16S rRNAs
A82-33276

A theory for the origin of a self-replicating chemical system. II - Computer simulation of the autogen
A82-33287

Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with crista membrane fragments of mitochondria
A82-33595

BIOLOGICAL MODELS (MATHEMATICS)

A computer linear regression model to determine ventilatory anaerobic threshold
A82-32843

Effect of base oscillations on the human skeletal muscle and joint forces in a standing posture
A82-33754

Mechanoreceptor systems of the organism from the viewpoint of vibrational biomechanics
A82-33755

Dynamic modeling and vibratory response of human subjects in heave mode
A82-33761

Some problems of identification and modelling of the human body
A82-33762

Comparative study of the gas-transport characteristics of models of an extraerythrocytic oxygen carrier
A82-34680

A computational model of binocular depth perception
A82-34834

BIOLOGY

USSR report: Space biology and aerospace medicine, volume 16, no. 2, March - April 1982 [JPRS-80822]
N82-25754

Third decade of space biology
N82-25755

BIOMAGNETISM

The organism and magnetic fields
A82-34696

Magnetic-field effect on photophysical processes in the light-harvesting pigment apparatus of purple photosynthetic bacteria
A82-34817

USSR Report. Life sciences: Effects of nonionizing electromagnetic radiation, no. 5 [JPRS-80525]
N82-24819

Pathomorphological reactions of cerebrocortical neural elements to alternating magnetic field
N82-24820

Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821

Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822

BIOMASS

Solar bacterial biomass farm for space vehicles
A82-33095

BIOMEDICAL DATA

Problems of human biology in Polish polar research
A82-31837

STS-2 medical report [NASA-TM-58245]
N82-25751

BIONICS

Eye modelling
A82-32525

BIOSYNTHESIS

Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions
A82-33286

BIOTECHNOLOGY

Deep-sea bacteria - Isolation in the absence of decompression
A82-32800

BLINDNESS

Test for the study of the efficiency of the tactile-motor analyzer
A82-34691

BLOOD

Blood-gas CO2 equilibration in lungs of unanesthetized dogs during hypercapnia
A82-32834

Hormone levels in the blood of patients with Meniere's disease and cochleovestibulopathies
A82-34475

Features of the reaction of the blood serum of a healthy person with epidermis
A82-34678

Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821

Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822

BLOOD COAGULATION

The nervous regulation of the liquid state of the blood and its coagulation
A82-34697

BLOOD FLOW

Characteristics of adjustment of lung diffusing capacity to work
A82-32827

Thermoregulatory influences on common carotid blood flow in the dog
A82-32829

Effects of hyperventilation on pulmonary blood flow and recirculation time of humans
A82-32832

BLOOD PLASMA

Acute hypervolemia, cardiac performance, and aerobic power during exercise
A82-32836

Increases in plasma beta-endorphin/beta-lipotropin immunoreactivity after treadmill running in humans
A82-32839

Effect of 40-day flight on blood amino acid content in the crew of Salyut-5
N82-25757

BLOOD PRESSURE

Venous pressure as an indicator of circulating blood volume
N82-25777

BLOOD VOLUME

Acute hypervolemia, cardiac performance, and aerobic power during exercise
A82-32836

Venous pressure as an indicator of circulating blood volume
N82-25777

BONE MARROW
Effects of traumatic shock on cytogenetic processes in the epithelial cells of the cornea and tongue and the bone marrow cells of albino rats
A82-34676
Regulation of the functional activity of stem cells which are the precursors of granulomonopoiesis by polypeptide thymic and bone marrow factors
A82-34684
The effect of repeated sublethal overheating on cytogenetic processes in the epithelium of the cornea and in bone marrow cells in white rats
A82-34685
Postradiation recovery of human bone marrow and morphological dynamics of undifferentiated cell pool
N82-24811

BONES
Mineral phase and protein matrix of rat osseous tissue following flight aboard the Cosmos-1129 biosatellite
N82-25769

BRADYCARDIA
Sex differences in cardiac responses to successive apnea periods
A82-32011

BRAIN
Brain mechanisms of visual attention
A82-32075
Dynamics of changes in the prostaglandin content of the brain tissue under cervical sympathectomy and circulatory hypoxia
A82-34677
Ultracytochemical changes in the brain and liver under the influence of low-intensity nonionizing microwave radiation
A82-34687

BRAIN CIRCULATION
Dynamics of changes in the prostaglandin content of the brain tissue under cervical sympathectomy and circulatory hypoxia
A82-34677
Microcirculation and oxygen tension in the rat brain cortex during hemorrhagic shock
A82-34683

BURNS (INJURIES)
USSR Report. Life sciences: Biomedical and behavioral sciences, no. 14
[JPRS-79973]
N82-24806
Pigskin xenografts in treatment of patients with extensive burns
N82-24808

C

CALCIFEROL
Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin
A82-32692

CALCIUM
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822

CALCIUM METABOLISM
Effects of 1 alpha-hydroxycholecalciferol and different amounts of phosphorus in food allowance on some parameters of phosphorus and calcium metabolism in hypokinetic rats
N82-25762

CALORIC STIMULI
A caloric vestibular test using air
A82-34674

CAMOUFLAGE
Distraction in visual search
[IZF-1981-7]
N82-24830

CAPILLARIES (ANATOMY)
Pathomorphological reactions of cerebrocortical neural elements to alternating magnetic field
N82-24820

CARBOHYDRATE METABOLISM
The carbohydrase system of the small intestine of rats of various ages following heat and cold exposures
A82-33135
Local cerebral glucose utilization in non-rapid eye movement sleep
A82-34831

CARBON DIOXIDE CONCENTRATION
Mechanical properties of rat lung during prolonged hypercapnia
A82-32831
Blood-gas CO2 equilibration in lungs of unanesthetized dogs during hypercapnia
A82-32834

CARBONACEOUS METEORITES
Distribution and enantiomeric composition of amino acids in the Murchison meteorite
A82-32210

CARDIAC VENTRICLES
Acceleration-induced atrioventricular dissociation - Hemodynamic consequences
A82-32002

CARDIOGRAPHY
Iterative reconstruction-reprojection - An algorithm for limited data cardiac-computer tomography
A82-32879

CARDIOVASCULAR SYSTEM
An analysis of the risk of human cardiac damage during +Gz stress - A review
A82-32001
Women at altitude - Cardiovascular responses to hypoxia
A82-32009
Effect of aerobic conditioning on cardiovascular response to isometric exercise
A82-32841
Induced venous pooling and cardiorespiratory responses to exercise after bed rest
A82-32842
Man's adaptive reactions to acoustic parameters of isolated habitats
N82-25773
Age-related distinctions of echocardiographic parameters of healthy man
N82-25774

CAROTID SINUS BODY
Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation
A82-32860

CATALYSIS
Oligonucleotide formation catalyzed by mononucleotide matrices
A82-33284

CATHODE RAY TUBES
Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts
A82-32010

CELLS (BIOLOGY)
Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g
A82-32154
Reduction of the edema of acute hyperoxic lung injury by granulocyte depletion
A82-32838
Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions
A82-33286
The nature of radiation damage of haemopoietic stem cells under continuous irradiation at low dose rate
A82-33600
Regulation of the functional activity of stem cells which are the precursors of granulomonopoiesis by polypeptide thymic and bone marrow factors
A82-34684
Distribution of nucleolar nucleic acids in Purkinje cells under vestibular stimulation and immobilization of rats
A82-34686
Ultracytochemical changes in the brain and liver under the influence of low-intensity nonionizing microwave radiation
A82-34687

Magnetic-field effect on photophysical processes in the light-harvesting pigment apparatus of purple photosynthetic bacteria A82-34917
USSR Report. Life sciences: Biomedical and behavioral sciences, no. 14 [JPRS-79973] N82-24806
Ultrastructural changes in central nervous system cells induced by arboviruses N82-24807
Some physiological and biochemical features of cells of carrot gall developed in weightlessness N82-25764

CENTRAL NERVOUS SYSTEMS
Central nervous system reactivity in the image of the visual evoked potential and the perceptual-motor performance of pilots and cosmonaut candidates under conditions of sleep deprivation A82-31831
Test for the study of the efficiency of the tactile-motor analyzer A82-34691

CENTRIFUGING STRESS
Human tracking performance changes during combined +Gz and + or - Gy stress A82-32003

CEREBRAL CORTEX
Microcirculation and oxygen tension in the rat brain cortex during hemorrhagic shock A82-34603
USSR Report. Life sciences: Effects of nonionizing electromagnetic radiation, no. 5 [JPRS-80525] N82-24819
Pathomorphological reactions of cerebrocortical neural elements to alternating magnetic field N82-24820

CEREBRUM
Local cerebral glucose utilization in non-rapid eye movement sleep A82-34831

CHARACTER RECOGNITION
Recognition experiments with thermal images. Part 2: Effect of raster frequency --- raster scanned images [IZF-1980-14] N82-25788
Recognition experiments with thermal images. Part 3: Effect of contrast rendition [IZF-1981-5] N82-25789

CHEMICAL COMPOSITION
Increases in plasma beta-endorphin/beta-lipotropin immunoreactivity after treadmill running in humans A82-32839
Comets - Chemistry and chemical evolution A82-33280
Elemental analysis of samples of biological origin relative to their protein content by means of charged particle bombardment [KFKI-1981-26] N82-25752

CHEMICAL EVOLUTION
Enzymatic characterization of peptidic materials isolated from aqueous solutions of ammonium cyanide /pH9/ and hydrocyanic acid /pH6/ exposed to ionizing radiation A82-33277
Binding of nickel /II/ to 5-prime-nucleoside monophosphates and related compounds --- role in origin of life A82-33278
Comets - Chemistry and chemical evolution A82-33280
Organic synthesis from reducing models of the atmosphere of the primitive earth with UV light and electric discharges A82-33282
Interaction between ATP, metal ions, glycine, and several minerals A82-33283
Oligonucleotide formation catalyzed by mononucleotide matrices A82-33284
Synthesis of phosphatidylcholine under possible primitive earth conditions A82-33285
A theory for the origin of a self-replicating chemical system. II - Computer simulation of the autogen A82-33287

CHEMICAL WARFARE
Inquiry of field experience with caps for the Royal Dutch Army [IZF-1981-21] N82-25799

CHEMORECEPTORS
Effect of training on beta-adrenergic receptor number in rat heart A82-32828

CHEMOTHERAPY
Problems in the therapy of soman poisoning [MBL-1981-1] N82-24824
The effects of some drugs on the survival of rats in various stages of hemorrhagic shock [MBL-1981-7] N82-25753

CHLORINATION
A hygienic assessment of the possibility of using 1,3-dichloro-5,5-dimethylhydantoin for disinfecting drinking water A82-34694

CHLOROPLASTS
Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with crista membrane fragments of mitochondria A82-33595

CHOLINE
Synthesis of phosphatidylcholine under possible primitive earth conditions A82-33285

CHOLINESTERASE
Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields N82-24821
Problems in the therapy of soman poisoning [MBL-1981-1] N82-24824

CHROMOSOMES
Development of guayule (parthenium argentatum) [NASA-CR-168926] N82-24812

CIRCADIAN RHYTHMS
Human body clocks and the timing of sleep A82-32213

CLINICAL MEDICINE
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task A82-32005
Reduction of the edema of acute hyperoxic lung injury by granulocyte depletion A82-32838
An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings A82-34688
Survey of the experimental shock research performed at the Medical Biological Laboratory TNO and at the Pharmacological Laboratory, University of Amsterdam [MBL-1981-9] N82-25702

CLOSED ECOLOGICAL SYSTEMS
Plant diversity to support humans in a CELSS ground based demonstrator [NASA-CR-168918] N82-24833
Controlled Ecological Life Support System: Use of Higher Plants [NASA-CP-2231] N82-24834
Controlled Ecological Life Support System: Research and Development Guidelines [NASA-CP-2232] N82-24835
Controlled ecological life support system - biological problems [NASA-CP-2233] N82-24836

COCHLEA
Hormone levels in the blood of patients with Meniere's disease and cochleovestibulopathies A82-34475

COGNITIVE PSYCHOLOGY
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task A82-32005
Perceptual components of computer displays A82-32413

COLD ACCLIMATIZATION
Problems of human biology in Polish polar research A82-31837

COLD TOLERANCE
Finger temperature after a finger-cooling test - Influence of air temperature and smoking A82-32833
Effects of acute cold exposure on muscle amino acid and protein in rats A82-32840
The carbohydrase system of the small intestine of rats of various ages following heat and cold exposures A82-33135
COLD WEATHER
Cold weather goggles. 1: Optical evaluation [AD-A111333] N82-25794
COLOR VISION
Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts A82-32010
COMETS
Comets - Chemistry and chemical evolution A82-33280
COMFORT
Discomfort judgments of translational and angular whole-body vibrations A82-32006
COMPENSATORY TRACKING
Comparative analysis of human and subhuman operator performance in a control loop A82-33759
COMPUTER ASSISTED INSTRUCTION
APU Man-Computer Studies Group Seminar Proceedings 1 --- conference proceedings, Teddington, England, Feb.-Apr., 1980 [ANTE(E)-TR-80109] N82-25790
Three computer roles in a cybernetic learning system --- computerized simulation N82-25791
The representation of knowledge: Goldstein's genetic graph --- related to computer assisted instruction N82-25792
COMPUTER GRAPHICS
Perceptual components of computer displays A82-32413
Iterative reconstruction-reprojection - An algorithm for limited data cardiac-computer tomography A82-32079
COMPUTER PROGRAMS
A computer linear regression model to determine ventilatory anaerobic threshold A82-32043
COMPUTER TECHNIQUES
Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation A82-32880
COMPUTERIZED SIMULATION
Eye modelling A82-32525
A theory for the origin of a self-replicating chemical system. II - Computer simulation of the autogen A82-33287
Three computer roles in a cybernetic learning system --- computerized simulation N82-25791
COMPUTERS
The direction of the process of computer operator training A82-34690
CONFERENCES
APU Man-Computer Studies Group Seminar Proceedings 1 --- conference proceedings, Teddington, England, Feb.-Apr., 1980 [ANTE(E)-TR-80109] N82-25790
CONFINEMENT
Neurophysiological characteristics of sensorimotor cortex of rats submitted to early motor deprivation and conditioning N82-25770
CONGRESSIONAL REPORTS
The use of animals in medical research and testing [GPO-87-590] N82-24813
CONSUMABLES (SPACECREW SUPPLIES)
Diet of crew in Salyut-6 orbital station N82-25756
Biological value and shelf life of cultured dairy products in the diet of cosmonauts N82-25758
CONTINUOUS RADIATION
The nature of radiation damage of haemopoietic stem cells under continuous irradiation at low dose rate A82-33600
CONTROL CONFIGURED VEHICLES
Human tracking performance changes during combined +Gz and + or - Gy stress A82-32003
CONTROL SIMULATION
Driving experience and task demands in simulator and instrumented car: A validation study [IZF-1980-9] N82-24838
CONTROLLABILITY
Predicting pilot opinion ratings of flying qualities of highly control augmented aircraft using an optimal pilot model [AD-A111136] N82-24837
CONVERSATION
The representation of knowledge: Pask's L sub P --- artificial intelligence N82-25793
CORNEA
Effects of traumatic shock on cytogenetic processes in the epithelial cells of the cornea and tongue and the bone marrow cells of albino rats A82-34676
The effect of repeated sublethal overheating on cytogenetic processes in the epithelium of the cornea and in bone marrow cells in white rats A82-34685
CORONARY ARTERY DISEASE
Stress testing and coronary artery disease - Study of 180 cases on tread mill A82-32288
COSMOCHEMISTRY
Comets - Chemistry and chemical evolution A82-33280
COSMONAUTS
Psychological aspects of aerospace orientation N82-24258
Effect of 48-day flight on blood amino acid content in the crew of Salyut-5 N82-25757
COST EFFECTIVENESS
The aerospace screening electroencephalogram - An analysis of benefits and costs in the U.S. Air Force A82-32013
COVERINGS
Inquiry of field experience with caps for the Royal Dutch Army [IZF-1981-21] N82-25799
CULTURE TECHNIQUES
Development of guayule (parthenium argentatum) [NASA-CR-168926] N82-24812
CURES
Problems in the therapy of soman poisoning [MBL-1981-1] N82-24824
CYBERNETICS
APU Man-Computer Studies Group Seminar Proceedings 1 --- conference proceedings, Teddington, England, Feb.-Apr., 1980 [ANTE(E)-TR-80109] N82-25790
Three computer roles in a cybernetic learning system --- computerized simulation N82-25791
CYSTEINE
Effect of 48-day flight on blood amino acid content in the crew of Salyut-5 N82-25757
CYTOGENESIS
Effects of traumatic shock on cytogenetic processes in the epithelial cells of the cornea and tongue and the bone marrow cells of albino rats A82-34676
The effect of repeated sublethal overheating on cytogenetic processes in the epithelium of the cornea and in bone marrow cells in white rats A82-34685

CYTOLOGY
Regulation of the functional activity of stem cells which are the precursors of granulomonopoiesis by polypeptide thymic and bone marrow factors
A82-34684
Distribution of nucleolar nucleic acids in Purkinje cells under vestibular stimulation and immobilization of rats
A82-34686
Ultracytochemical changes in the brain and liver under the influence of low-intensity nonionizing microwave radiation
A82-34687

D

DATA PROCESSING
Perceptual components of computer displays
A82-32413
DATA PROCESSING TERMINALS
Operator performance on two office data entry system testbeds: Preliminary analyses
[AD-A111535] N82-25795
DATA SYSTEMS
Iterative reconstruction-reprojection - An algorithm for limited data cardiac-computer tomography
A82-32879
DECISION MAKING
Contingent decision behavior: A review and discussion of issues
[AD-A111655] N82-25787
DECISION THEORY
Contingent decision behavior: A review and discussion of issues
[AD-A111655] N82-25787
DECOMPRESSION SICKNESS
The pathophysiology, presentation, and triage of altitude-related decompression sickness associated with hypobaric chamber operation
A82-32012
DEHYDRATED FOOD
Diet of crew in Salyut-6 orbital station
N82-25756
Biological value and shelf life of cultured dairy products in the diet of cosmonauts
N82-25759
DEHYDRATION
Significance of the rehydration rate of the inner ear in the choice of method of surgical intervention in the endolymphatic system in Meniere's disease
A82-34473
DEOXYRIBONUCLEIC ACID
Taxonomic relations between archaebacteria including 6 novel genera examined by cross hybridization of DNAs and 16S rRNAs
A82-33276
DIABETES MELLITUS
The prognostic value of the glucose tolerance test
A82-34698
DIAGNOSIS
Myoglobinemia as a criterion for the early diagnosis of acute myocardial infarction /Literature review/
A82-33726
In vivo X-ray fluorescence analysis for medical diagnosis. A non-invasine method for quantitative determination of kidney function after radiographic examinations with iodinated contrast media
[LUNFD6/NFFR-1013/1-21/(1981)] N82-25781
DIETS
Diet of crew in Salyut-6 orbital station
N82-25756
Biological value and shelf life of cultured dairy products in the diet of cosmonauts
N82-25759
Effects of 1 alpha-hydroxycholecalciferol and different amounts of phosphorus in food allowance on some parameters of phosphorus and calcium metabolism in hypokinetic rats
N82-25762
DISPLAY DEVICES
Perceptual components of computer displays
A82-32413
User response characteristics for sequential displays
A82-32496
DISTRIBUTED PARAMETER SYSTEMS
Vibration defence of man - Questions of modeling
A82-33764
Operator performance on two office data entry system testbeds: Preliminary analyses
[AD-A111535] N82-25795
DIVING (UNDERWATER)
Stress, information processing and diving
[IZF-1981-4] N82-24829
DRUGS
Comparative study of the gas-transport characteristics of models of an extraerythrocytic oxygen carrier
A82-34680
DRY HEAT
Auxiliary cooling: Comparison of air-cooled versus water cooled vests in hot-dry and hot-wet environments
[AD-A110554] N82-25797
DYNAMIC MODELS
Dynamic modeling and vibratory response of human subjects in heave mode
A82-33761
Non-linear effects connected with the spatial vibrations of biomechanical systems
A82-33763
Vibration defence of man - Questions of modeling
A82-33764
DYNAMIC RESPONSE
Non-linear effects connected with the spatial vibrations of biomechanical systems
A82-33763

E

EAR
Significance of the rehydration rate of the inner ear in the choice of method of surgical intervention in the endolymphatic system in Meniere's disease
A82-34473
ECHOCARDIOGRAPHY
Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation
A82-32880
Age-related distinctions of echocardiographic parameters of healthy man
N82-25774
EDEMA
Reduction of the edema of acute hyperoxic lung injury by granulocyte depletion
A82-32838
EDUCATION
Performance measurement and Navy's Tactical Aircrew Training System
[AD-A110669] N82-25786
EFFERENT NERVOUS SYSTEMS
Neurophysiological characteristics of sensorimotor cortex of rats submitted to early motor deprivation and conditioning
N82-25770
EJECTION
Torso experienced aerodynamic forces experienced during ejection
[AD-A098942] N82-24823
EJECTION INJURIES
Mechanism of vertebral fracture in the F/FB-111 ejection experience
A82-32004
ELASTIC DAMPING
The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests
A82-33760
ELECTROCARDIOGRAPHY
USSR Report. Life sciences: Effects of nonionizing electromagnetic radiation, no. 5
[JPRS-80525] N82-24819
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822
ELECTROENCEPHALOGRAPHY
The aerospace screening electroencephalogram - An analysis of benefits and costs in the U.S. Air Force
A82-32013

ELECTROLYTE METABOLISM
Pathomorphological reactions of cerebrocortical neural elements to alternating magnetic field N82-24820

ELECTROMAGNETIC PULSES
The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity A82-34760

ELECTROMYOGRAPHY
Effect of pH on sensation and vastus lateralis electromyogram during cycling exercise A82-32835

EMERGENCIES
Survey of the experimental shock research performed at the Medical Biological Laboratory TNO and at the Pharmacological Laboratory, University of Amsterdam [MBL-1981-9] N82-25782

EMISSION SPECTRA
Elemental analysis of samples of biological origin relative to their protein content by means of charged particle bombardment [KFKI-1981-26] N82-25752

EMOTIONAL FACTORS
Effects of impulse noise on human beings: A pilot study on annoyance ratings in the laboratory [IZF-1981-9] N82-24825

ENDOLYMPH
Significance of the rehydration rate of the inner ear in the choice of method of surgical intervention in the endolymphatic system in Meniere's disease A82-34473

ENGRAVING
Visual ergonomics in cartographic and lithographic work at the Topographic Service. Part 2: Requirements and recommendation for work stations [IZF-1981-14-PT-2] N82-25798

ENVIRONMENT EFFECTS
Age-related distinctions of echocardiographic parameters of healthy man N82-25774

ENVIRONMENT SIMULATION
Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions A82-33286

ENZYME ACTIVITY
The carbohydrase system of the small intestine of rats of various ages following heat and cold exposures A82-33135
Enzymatic characterization of peptidic materials isolated from aqueous solutions of ammonium cyanide /pH9/ and hydrocyanic acid /pH6/ exposed to ionizing radiation A82-33277
Effect of thymalin on the system of cyclic nucleotides in the mouse spleen A82-34679
Glyceroaldehyde phosphatedehydrogenase from human muscles in atherosclerosis A82-34681
State of digestive system following long-term space flights N82-25758
Functional state of rat gastrointestinal tract organs following flight in Cosmos-1129 biosatellite N82-25765

ENZYMOLOGY
State of digestive system following long-term space flights N82-25758

EPIDERMIS
Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin A82-32692
Features of the reaction of the blood serum of a healthy person with epidermis A82-34678

EPITHELIUM
Effects of traumatic shock on cytogenetic processes in the epithelial cells of the cornea and tongue and the bone marrow cells of albino rats A82-34676

Features of the reaction of the blood serum of a healthy person with epidermis A82-34678

ERYTHROCYTES
Studies on the property and transplantation of haemopoietic stem cells from peripheral blood A82-34207

EVAPORATIVE COOLING
Thermoregulatory influences on common carotid blood flow in the dog A82-32829

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Central nervous system reactivity in the image of the visual evoked potential and the perceptual-motor performance of pilots and cosmonaut candidates under conditions of sleep deprivation A82-31831

EXERCISE PHYSIOLOGY
Hemodynamic response during combined tilt table-isometric exercise test and +Gz acceleration tolerance A82-31832
Effect of aerobic conditioning on cardiovascular response to isometric exercise A82-32841
Induced venous pooling and cardiorespiratory responses to exercise after bed rest A82-32842

EXOBIOLOGY
Biological experiments in space biology and gravitation A82-32349
Space biology and medicine A82-34695

EXPERIMENTAL DESIGN
The use of animals in medical research and testing [GPO-87-590] N82-24813

EYE (ANATOMY)
Eye modelling A82-32525

EYE MOVEMENTS
Purkinje image eyetracking: A market survey [NASA-CR-166330] N82-25779

F

F-111 AIRCRAFT
Mechanism of vertebral fracture in the F/FB-111 ejection experience A82-32004

FABRICS
An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings A82-34688

FARM CROPS
Solar bacterial biomass farm for space vehicles A82-33895

FEEDBACK CONTROL
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task A82-32005

FEMALES
Women at altitude - Cardiovascular responses to hypoxia A82-32009
Inhalation studies with halothane in female rats. Part A: Toxicological data N82-24817
Inhalation study with halothane in female rats. Part B: Immunological data N82-24818

FINGERS
Finger temperature after a finger-cooling test - Influence of air temperature and smoking A82-32833

FLIGHT CREWS
A preliminary study on noise induced hearing loss in serving aircrew of Indian Air Force A82-32289
Performance measurement and Navy's Tactical Aircrew Training System [AD-A110669] N82-25786

FLIGHT FATIGUE
Psychosomatic self-regulation - An effective method for sustaining pilot work capacity during a prolonged flight
A82-33727
FLIGHT SAFETY
A longitudinal analysis of TH Index and identification of period of acute heat stress
A82-32290
FLIGHT TRAINING
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task
A82-32005
Performance measurement and Navy's Tactical Aircrew Training System
[AD-A110665] N82-25786
FLYING SPOT SCANNERS
Recognition of thermal images - Effects of scan-line density and signal-to-noise ratio
A82-32579
FOOD
Solar bacterial biomass farm for space vehicles
A82-33095
FOSSILS
Pyrolysis of Precambrian kerogens - Constraints and capabilities
A82-33288
FOUNDRIES
Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-33750

G

GAS EXCHANGE
Characteristics of adjustment of lung diffusing capacity to work
A82-32827
Blood-gas CO2 equilibration in lungs of unanesthetized dogs during hypercapnia
A82-32834
A computer linear regression model to determine ventilatory anaerobic threshold
A82-32843
GAS TRANSPORT
Comparative study of the gas-transport characteristics of models of an extraerythrocytic oxygen carrier
A82-34680
GASEOUS DIFFUSION
Characteristics of adjustment of lung diffusing capacity to work
A82-32827
GASTROINTESTINAL SYSTEM
State of digestive system following long-term space flights
N82-25756
Functional state of rat gastrointestinal tract organs following flight in Cosmos-1129 biosatellite
N82-25765
GENETIC ENGINEERING
Taxonomic relations between archaebacteria including 6 novel genera examined by cross hybridization of DNAs and 16S rRNAs
A82-33276
GENETICS
Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g
A82-32154
Third decade of space biology
N82-25755
GLUCOSE
The prognostic value of the glucose tolerance test
A82-34690
Local cerebral glucose utilization in non-rapid eye movement sleep
A82-34831
GLYCINE
Interaction between ATP, metal ions, glycine, and several minerals
A82-33283
GLYCOGENS
Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821
GOGGLES
Cold weather goggles. 1: Optical evaluation
[AD-A111333] N82-25794
GONADS
Influence of level of mineralization of desalinated, high quality water of the hydrocarbonate class on functional state of male white rat gonads
N82-25763
GRAPH THEORY
The representation of knowledge: Goldstein's genetic graph --- related to computer assisted instruction
N82-25792
GRAVITATIONAL EFFECTS
Biological experiments in space biology and gravitation
A82-32349
GROUP DYNAMICS
The level of group development as a factor influencing the relation between group size and successfulness
A82-34689
GUAYULE
Development of guayule (parthenium argentatum)
[NASA-CR-168926] N82-24812

H

HAND (ANATOMY)
Immediate effects of vibration transmitted to the hand
A82-33756
Critical assessment of common methods to determine vibrational stress of hand-arm system
A82-33766
HEALTH PHYSICS
Industrial hygiene and the prophylaxis of occupational diseases in work with lasers --- Russian book
A82-33394
HEART RATE
Acute hypervolemia, cardiac performance, and aerobic power during exercise
A82-32836
Dynamics of cardiac, respiratory, and metabolic function in men in response to step work load
A82-32837
Induced venous pooling and cardiorespiratory responses to exercise after bed rest
A82-32882
HEAT TOLERANCE
A longitudinal analysis of TH Index and identification of period of acute heat stress
A82-32290
Thermoregulatory influences on common carotid blood flow in the dog
A82-32829
The carbohydrase system of the small intestine of rats of various ages following heat and cold exposures
A82-33135
HEMATOLOGY
The prognostic value of the glucose tolerance test
A82-34690
Inhalation studies with halothane in female rats. Part A: Toxicological data
N82-24817
HEMATOPOIESIS
The nature of radiation damage of haemopoietic stem cells under continuous irradiation at low dose rate
A82-33600
Postradiation recovery of human bone marrow and morphological dynamics of undifferentiated cell pool
N82-24811
HEMATOPOIETIC SYSTEM
Studies on the property and transplantation of haemopoietic stem cells from peripheral blood
A82-34247

**HEMODYNAMIC RESPONSES**
Hemodynamic response during combined tilt table-isometric exercise test and +Gz acceleration tolerance
A82-31832
Acceleration-induced atrioventricular dissociation - Hemodynamic consequences
A82-32002
Thermoregulatory influences on common carotid blood flow in the dog
A82-32828
Induced venous pooling and cardiorespiratory responses to exercise after bed rest
A82-32842

**HEMOGLOBIN**
Comparative study of the gas-transport characteristics of models of an extraerythrocytic oxygen carrier
A82-34680

**HEMORRHAGES**
Microcirculation and oxygen tension in the rat brain cortex during hemorrhagic shock
A82-34683
The effects of some drugs on the survival of rats in various stages of hemorrhagic shock
[MBL-1981-7] N82-25753

**HEMOSTATICS**
The nervous regulation of the liquid state of the blood and its coagulation
A82-34697

**HIGH ALTITUDE ENVIRONMENTS**
Women at altitude - Cardiovascular responses to hypoxia
A82-32005

**HIGH GRAVITY ENVIRONMENTS**
Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g
A82-32154

**HIGH PRESSURE**
Deep-sea bacteria - Isolation in the absence of decompression
A82-32800

**HIGH TEMPERATURE ENVIRONMENTS**
Auxiliary cooling: Comparison of air-cooled versus water cooled vests in hot-dry and hot-wet environments
[AD-A110554] N82-25797

**HIGH VOLTAGES**
USSR Report. Life sciences: Effects of nonionizing electromagnetic radiation, no. 5
[JPRS-80525] N82-24819
Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821

**HOMOGENIZING**
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822

**HORMONE METABOLISMS**
Sympathoadrenal system of cosmonauts following 7-day flights
N82-25776

**HORMONES**
Hormone levels in the blood of patients with Meniere's disease and cochleovestibulopathies
A82-34475

**HOT WEATHER**
A longitudinal analysis of TH Index and identification of period of acute heat stress
A82-32290

**HOWITZERS**
Recommendations to avoid hearing damage during firing of the M198, FH70, M71 and FH77 towed howitzers
[IZF-1981-13] N82-25784

**HUMAN BEHAVIOR**
Studies of planning behavior of aircraft pilots in normal, abnormal, and emergency situations --- Book
A82-33905
The level of group development as a factor influencing the relation between group size and successfulness
A82-34689

**HUMAN BEINGS**
Effects of hyperventilation on pulmonary blood flow and recirculation time of humans
A82-32832
Effects of impulse noise on human beings: A pilot study on annoyance ratings in the laboratory
[IZF-1981-9] N82-24825

**HUMAN BODY**
Effects of muscle vibration and joint oscillation on human motor mechanisms
A82-33753
Some problems of identification and modelling of the human body
A82-33762
Vibration defence of man - Questions of modeling
A82-33764
Automatic system for study and measurement of vibration parameters affecting human body
A82-33765
Torso experienced aerodynamic forces experienced during ejection
[AD-A098942] N82-24823
Analysis of the polarization dependence of the interaction between human frame targets and radio frequency sensor fields
[AD-A111590] N82-25796

**HUMAN FACTORS ENGINEERING**
Psychological aspects of aerospace orientation
N82-24258
Visual ergonomics in cartographic and lithographic work at the Topographic Service. Part 2: Requirements and recommendation for work stations
[IZF-1981-14-PT-2] N82-25798

**HUMAN PATHOLOGY**
An analysis of the risk of human cardiac damage during +Gz stress - A review
A82-32001
Myoglobinemia as a criterion for the early diagnosis of acute myocardial infarction /Literature review/
A82-33726
Glyceroaldehyde phosphatedehydrogenase from human muscles in atherosclerosis
A82-34681

**HUMAN PERFORMANCE**
The effects of social isolation on human functioning
A82-31830
Problems of human biology in Polish polar research
A82-31837
Comparative analysis of human and subhuman operator performance in a control loop
A82-33759
Reconstruction of spatial information in the human visual system
A82-34830
Individual differences in dual task performance
[AD-A110768] N82-24826
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program basic research
[AD-A111057] N82-24827
A rationale for the development of cut-off scores --- task mastering
[IZF-1981-3] N82-24828
Search times in two-dimensional tables
[IZF-1981-10] N82-24832
Performance measurement and Navy's Tactical Aircrew Training System
[AD-A110669] N82-25786

**HUMAN REACTIONS**
Man's adaptive reactions to acoustic parameters of isolated habitats
N82-25773

**HUMAN TOLERANCES**
Hemodynamic response during combined tilt table-isometric exercise test and +Gz acceleration tolerance
A82-31832
Discomfort judgments of translational and angular whole-body vibrations
A82-32006
Increases in plasma beta-endorphin/beta-lipotropin immunoreactivity after treadmill running in humans
A82-32839
The prevention of dysadaptive changes in sailors at sea
A82-33728

**HUMIDITY**
Auxiliary cooling: Comparison of air-cooled versus water cooled vests in hot-dry and hot-wet environments
[AD-A110554] N82-25797

HYDRAZINES
  Toxic hazards research unit
    [AD-A110587] N82-25780
HYPERBARIC CHAMBERS
  Deep-sea bacteria - Isolation in the absence of decompression
    A82-32800
HYPERCAPNIA
  Mechanical properties of rat lung during prolonged hypercapnia
    A82-32831
  Blood-gas CO2 equilibration in lungs of unanesthetized dogs during hypercapnia
    A82-32834
HYPEROXIA
  Reduction of the edema of acute hyperoxic lung injury by granulocyte depletion
    A82-32830
HYPERTHERMIA
  The effect of repeated sublethal overheating on cytogenetic processes in the epithelium of the cornea and in bone marrow cells in white rats
    A82-34685
HYPERVENTILATION
  Effects of hyperventilation on pulmonary blood flow and recirculation time of humans
    A82-32832
HYPERVOLEMIA
  Acute hypervolemia, cardiac performance, and aerobic power during exercise
    A82-32836
HYPOBARIC ATMOSPHERES
  The pathophysiology, presentation, and triage of altitude-related decompression sickness associated with hypobaric chamber operation
    A82-32012
HYPODYNAMIA
  Neurophysiological characteristics of sensorimotor cortex of rats submitted to early motor deprivation and conditioning
    N82-25770
HYPOKINESIA
  Distribution of nucleolar nucleic acids in Purkinje cells under vestibular stimulation and immobilization of rats
    A82-34686
  Effect of hypokinesia on man's nutritional status
    N82-25760
  Clinicophysiological changes in man during long-term antiorthostatic hypokinesia
    N82-25761
  Effects of 1 alpha-hydroxycholecalciferol and different amounts of phosphorus in food allowance on some parameters of phosphorus and calcium metabolism in hypokinetic rats
    N82-25762
HYPOXIA
  Women at altitude - Cardiovascular responses to hypoxia
    A82-32009
  The effects of hypoxia on serial response time
    A82-32390
  Dynamics of changes in the prostaglandin content of the brain tissue under cervical sympathectomy and circulatory hypoxia
    A82-34677

I

ILLUSIONS
  The roles of axes of symmetry in orientation illusions
    A82-33749
IMAGE CONTRAST
  Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts
    A82-32010
  Recognition experiments with thermal images. Part 3: Effect of contrast rendition
    [IZF-1981-5] N82-25789
IMAGE PROCESSING
  Eye modelling
    A82-32525
  Recognition of thermal images - Effects of scan-line density and signal-to-noise ratio
    A82-32529
IMAGE RECONSTRUCTION
  Iterative reconstruction-reprojection - An algorithm for limited data cardiac-computer tomography
    A82-32879
IMAGING TECHNIQUES
  Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation
    A82-32880
IMMOBILIZATION
  Effect of limb immobilization on skeletal muscle
    A82-32826
IMMUNOLOGY
  The prevention of dysadaptive changes in sailors at sea
    A82-33728
  Features of the reaction of the blood serum of a healthy person with epidermis
    A82-34676
  Effect of thymalin on the system of cyclic nucleotides in the mouse spleen
    A82-34679
  Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats
    [MBL-1980-8] N82-24814
  Inhalation studies with benzene in rats. Part A: Toxicological data
    N82-24815
  Inhalation studies with benzene in rats. Part B: Immunological data
    N82-24816
  Inhalation study with halothane in female rats. Part B: Immunological data
    N82-24818
IMPULSES
  Effects of impulse noise on human beings: A pilot study on annoyance ratings in the laboratory
    [IZF-1981-9] N82-24825
INDUSTRIAL SAFETY
  Industrial hygiene and the prophylaxis of occupational diseases in work with lasers --- Russian book
    A82-33394
  Basic principles for hygienic rating of industrial whole-body vibration in the U.S.S.R.
    A82-33757
INFORMATION RETRIEVAL
  The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program basic research
    [AD-A111057] N82-24827
INFORMATION SYSTEMS
  Operator performance on two office data entry system testbeds: Preliminary analyses
    [AD-A111535] N82-25795
INFRARED IMAGERY
  Recognition of thermal images - Effects of scan-line density and signal-to-noise ratio
    A82-32529
  Recognition experiments with thermal images. Part 4: Effect of signal to noise ratio
    [IZF-1981-6] N82-24831
INJURIES
  An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings
    A82-34688
INTESTINES
  The carbohydrase system of the small intestine of rats of various ages following heat and cold exposures
    A82-33135
INTRUSION
  Analysis of the polarization dependence of the interaction between human frame targets and radio frequency sensor fields
    [AD-A111590] N82-25796
IODINE ISOTOPES
  In vivo X-ray fluorescence analysis for medical diagnosis: A non-invasive method for quantitative determination of kidney function after radiographic examinations with iodinated contrast media
    [LUNFD6/NFRA-1013/1-21/(1981)] N82-25781

IONIZING RADIATION
Enzymatic characterization of peptidic materials isolated from aqueous solutions of ammonium cyanide /pH9/ and hydrocyanic acid /pH6/ exposed to ionizing radiation
A82-33277

IONS
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822

IRON
Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821

## J

JET AIRCRAFT NOISE
A preliminary study on noise induced hearing loss in serving aircrew of Indian Air Force
A82-32289

JOINTS (ANATOMY)
Effects of muscle vibration and joint oscillation on human motor mechanisms
A82-33753

The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests
A82-33760

JUDGMENTS
Contingent decision behavior: A review and discussion of issues
[AD-A111655] N82-25787

## K

KEROGEN
Pyrolysis of Precambrian kerogens - Constraints and capabilities
A82-33288

KIDNEYS
In vivo X-ray fluorescence analysis for medical diagnosis. A non-invasine method for quantitative determination of kidney function after radiographic examinations with iodinated contrast media
[LUNFD6/NFRA-1013/1-21/(1981)] N82-25781

KNOWLEDGE
The representation of knowledge: Goldstein's genetic graph --- related to computer assisted instruction
N82-25792

The representation of knowledge: Sask's L sub p --- artificial intelligence
N82-25793

## L

LABORATORY EQUIPMENT
Biological experiments in space biology and gravitation
A82-32349

LABYRINTH
A caloric vestibular test using air
A82-34474

LABYRINTHECTOMY
Significance of the rehydration rate of the inner ear in the choice of method of surgical intervention in the endolymphatic system in Meniere's disease
A82-34473

LANDING SIMULATION
Effect of different runway sizes on pilot performance during simulated night landing approaches
A82-32008

LASER DAMAGE
Industrial hygiene and the prophylaxis of occupational diseases in work with lasers --- Russian book
A82-33394

LATERAL CONTROL
Human tracking performance changes during combined +Gz and + or - Gy stress
A82-32003

LEAD ORGANIC COMPOUNDS
Oligonucleotide formation catalyzed by mononucleotide matrices
A82-33284

LEARNING
The direction of the process of computer operator training
A82-34690

The representation of knowledge: Goldstein's genetic graph --- related to computer assisted instruction
N82-25792

LIFE SUPPORT SYSTEMS
Controlled Ecological Life Support System: Use of Higher Plants
[NASA-CP-2231] N82-24834
Controlled Ecological Life Support System: Research and Development Guidelines
[NASA-CP-2232] N82-24835

LIMBS (ANATOMY)
Effect of limb immobilization on skeletal muscle
A82-32826

LIPID METABOLISM
Lipid peroxidation and retinal damage under stress
A82-34682

Plasma and tissue lipids of rats following flight aboard Cosmos-936 biosatellite
N82-25767

Plasma and tissue lipids of rats following flight aboard the Cosmos-1129 biosatellite
N82-25768

LIPIDS
Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions
A82-33286

LIQUID COOLING
Auxiliary cooling: Comparison of air-cooled versus water cooled vests in hot-dry and hot-wet environments
[AD-A110554] N82-25797

LITHOGRAPHY
Visual ergonomics in cartographic and lithographic work at the Topographic Service. Part 2: Requirements and recommendation for work stations
[IZF-1981-14-PT-2] N82-25798

LIVER
Ultracytochemical changes in the brain and liver under the influence of low-intensity nonionizing microwave radiation
A82-34687

LONG DURATION SPACE FLIGHT
Sociological aspects of permanent manned occupancy of space
A82-33910

Plant diversity to support humans in a CELSS ground based demonstrator
[NASA-CR-168918] N82-24833
Effect of 49-day flight on blood amino acid content in the crew of Salyut-5
N82-25757

State of digestive system following long-term space flights
N82-25758

Clinicophysiological changes in man during long-term antiorthostatic hypokinesia
N82-25761

LUMINANCE
Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts
A82-32010

Recognition experiments with thermal images. Part 3: Effect of contrast rendition
[IZF-1981-5] N82-25789

LUMPED PARAMETER SYSTEMS
Dynamic modeling and vibratory response of human subjects in heave mode
A82-33761

LUNG MORPHOLOGY
Mechanical properties of rat lung during prolonged hypercapnia
A82-32831

Reduction of the edema of acute hyperoxic lung injury by granulocyte depletion
A82-32830

LUNGS
Characteristics of adjustment of lung diffusing capacity to work
A82-32827

Blood-gas CO2 equilibration in lungs of unanesthetized dogs during hypercapnia A82-32834

## M

**MAGNESIUM**
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium N82-24822

**MAGNETIC EFFECTS**
The organism and magnetic fields A82-34696
Magnetic-field effect on photophysical processes in the light-harvesting pigment apparatus of purple photosynthetic bacteria A82-34917

**MAGNETIC FIELDS**
USSR Report. Life sciences: Biomedical and behavioral sciences, no. 14 [JPRS-79973] N82-24806
Biotropic parameters of magnetic fields N82-24810
USSR Report. Life sciences: Effects of nonionizing electromagnetic radiation, no. 5 [JPRS-80525] N82-24819
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium N82-24822

**MAN ENVIRONMENT INTERACTIONS**
Modern problems of vibrations in the systems 'man-machine-environment' A82-33752

**MAN MACHINE SYSTEMS**
Perceptual components of computer displays A82-32413
Man under vibration: Suffering and protection --- Book A82-33751
Modern problems of vibrations in the systems 'man-machine-environment' A82-33752
Automatic system for study and measurement of vibration parameters affecting human body A82-33765
On the measuring of contact forces between human body and equipment A82-33767
Optimization of stochastic man-machine systems A82-33769
Vibration machines and man A82-33770
The direction of the process of computer operator training A82-34690
Driving experience and task demands in simulator and instrumented car: A validation study [IZF-1980-9] N82-24838
Purkinje image eyetracking: A market survey [NASA-CR-166330] N82-25779
APU Man-Computer Studies Group Seminar Proceedings 1 --- conference proceedings, Teddington, England, Feb.-Apr., 1980 [AMTE(R)-TM-80109] N82-25790
The representation of knowledge: Goldstein's genetic graph --- related to computer assisted instruction N82-25792
Operator performance on two office data entry system testbeds: Preliminary analyses [AD-A111535] N82-25795

**MANNED SPACE FLIGHT**
Sociological aspects of permanent manned occupancy of space A82-33910

**MAPPING**
Visual ergonomics in cartographic and lithographic work at the Topographic Service. Part 2: Requirements and recommendation for work stations [IZF-1981-14-PT-2] N82-25798

**MARKET RESEARCH**
Purkinje image eyetracking: A market survey [NASA-CR-166330] N82-25779

**MATHEMATICAL MODELS**
A survey of vibration control methods A82-33768

Role of polarization and resonance in assessing the biological effects of electromagnetic radiation N82-25775

**MECHANICAL ENGINEERING**
A survey of vibration control methods A82-33768

**MECHANORECEPTORS**
Mechanoreceptor systems of the organism from the viewpoint of vibrational biomechanics A82-33755

**MEDICAL PHENOMENA**
An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings A82-34688

**MEDICAL SCIENCE**
Biotropic parameters of magnetic fields N82-24810
The use of animals in medical research and testing [GPO-87-598] N82-24813

**MEMBRANES**
Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with crista membrane fragments of mitochondria A82-33595

**MEMORY**
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program basic research [AD-A111057] N82-24827

**MENTAL PERFORMANCE**
Psychosomatic self-regulation - An effective method for sustaining pilot work capacity during a prolonged flight A82-33727
Individual differences in dual task performance [AD-A110760] N82-24826
Stress, information processing and diving [IZF-1981-4] N82-24829

**METABOLISM**
Dynamics of cardiac, respiratory, and metabolic function in men in response to step work load A82-32837
USSR Report. Life sciences: Effects of nonionizing electromagnetic radiation, no. 5 [JPRS-80525] N82-24819
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium N82-24822
Effect of hypokinesia on man's nutritional status N82-25760

**METAL IONS**
Interaction between ATP, metal ions, glycine, and several minerals A82-33283

**METEORITIC COMPOSITION**
Distribution and enantiomeric composition of amino acids in the Murchison meteorite A82-32210

**METHIONINE**
Effect of 48-day flight on blood amino acid content in the crew of Salyut-5 N82-25757

**MICROBIOLOGY**
Third decade of space biology N82-25755

**MICROWAVES**
Ultracytochemical changes in the brain and liver under the influence of low-intensity nonionizing microwave radiation A82-34687

**MILLIMETER WAVES**
The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity A82-34768

**MINERAL METABOLISM**
Mineral phase and protein matrix of rat osseous tissue following flight aboard the Cosmos-1129 biosatellite N82-25769

MINERALS
Influence of level of mineralization of desalinated, high quality water of the hydrocarbonate class on functional state of male white rat gonads
N82-25763

MINING
Vibration machines and man
A82-33770

MITOCHONDRIA
Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with cristae membrane fragments of mitochondria
A82-33595

MOTION SICKNESS
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task
A82-32005

MUSCLES
Effects of muscle vibration and joint oscillation on human motor mechanisms
A82-33753

Glyceroaldehyde phosphatedehydrogenase from human muscles in atherosclerosis
A82-34681

Amino acids of femoral quadriceps of rats following flight aboard the Cosmos-936 biosatellite
N82-25766

MUSCULAR FATIGUE
Effect of pH on sensation and vastus lateralis electromyogram during cycling exercise
A82-32835

MUSCULAR FUNCTION
Effect of training on beta-adrenergic receptor number in rat heart
A82-32828

Effects of acute cold exposure on muscle amino acid and protein in rats
A82-32840

The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests
A82-33760

MUSCULAR TONUS
Effects of muscle vibration and joint oscillation on human motor mechanisms
A82-33753

MUSCULOSKELETAL SYSTEM
Effect of limb immobilization on skeletal muscle
A82-32826

Effect of base oscillations on the human skeletal muscle and joint forces in a standing posture
A82-33754

MYOCARDIAL INFARCTION
Myoglobinemia as a criterion for the early diagnosis of acute myocardial infarction /Literature review/
A82-33726

MYOCARDIUM
Effect of training on beta-adrenergic receptor number in rat heart
A82-32828

Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822

MYOGLOBIN
Myoglobinemia as a criterion for the early diagnosis of acute myocardial infarction /Literature review/
A82-33726

N

NAVY
The prevention of dysadaptive changes in sailors at sea
A82-33728

NERVES
Pathomorphological reactions of cerebrocortical neural elements to alternating magnetic field
N82-24820

NERVOUS SYSTEM
The nervous regulation of the liquid state of the blood and its coagulation
A82-34697

Ultrastructural changes in central nervous system cells induced by arboviruses
N82-24807

NEUROPHYSIOLOGY
Local cerebral glucose utilization in non-rapid eye movement sleep
A82-34831

NICKEL COMPOUNDS
Binding of nickel /II/ to 5-prime-nucleoside monophosphates and related compounds --- role in origin of life
A82-33278

NICOTINE
Finger temperature after a finger-cooling test - Influence of air temperature and smoking
A82-32833

NIGHT
Effect of different runway sizes on pilot performance during simulated night landing approaches
A82-32008

NITROGEN METABOLISM
Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821

NOISE INJURIES
The effect of noise-induced hearing loss on the ability to understand speech
[IZF-1981-11]
N82-25783
Recommendations to avoid hearing damage during firing of the M198, FH70, M71 and FH77 towed howitzers
[IZF-1981-13]
N82-25784
Statistical examination of hearing loss due to gunfire noise and industrial noise: Consequences for screening audiometry with fixed frequencies
[IZF-1981-20]
N82-25785

NOISE INTENSITY
A preliminary study on noise induced hearing loss in serving aircrew of Indian Air Force
A82-32289

Recommendations to avoid hearing damage during firing of the M198, FH70, M71 and FH77 towed howitzers
[IZF-1981-13]
N82-25784

NOISE POLLUTION
Man's adaptive reactions to acoustic parameters of isolated habitats
N82-25773

NOISE TOLERANCE
Effects of impulse noise on human beings: A pilot study on annoyance ratings in the laboratory
[IZF-1981-9]
N82-24825

NONLINEAR SYSTEMS
Non-linear effects connected with the spatial vibrations of biomechanical systems
A82-33763

NUCLEIC ACIDS
Distribution of nucleolar nucleic acids in Purkinje cells under vestibular stimulation and immobilization of rats
A82-34686

NUCLEOSIDES
Binding of nickel /II/ to 5-prime-nucleoside monophosphates and related compounds --- role in origin of life
A82-33278

NUCLEOTIDES
Binding of nickel /II/ to 5-prime-nucleoside monophosphates and related compounds --- role in origin of life
A82-33278

Oligonucleotide formation catalyzed by mononucleotide matrices
A82-33284

Effect of thymalin on the system of cyclic nucleotides in the mouse spleen
A82-34679

NUTRITION
The efficiency of the training of young athletes when vitamins and trace elements are included in their diet
A82-34693

Diet of crew in Salyut-6 orbital station
N82-25756

Biological value and shelf life of cultured dairy products in the diet of cosmonauts
N82-25759

Effect of hypokinesia on man's nutritional status
N82-25760

NUTRITIONAL REQUIREMENTS
Plant diversity to support humans in a CELSS ground based demonstrator
[NASA-CR-168918] N82-24833

O

OCULOMOTOR NERVES
Brain mechanisms of visual attention
A82-32075

ONTOGENY
Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g
A82-32154

OPERATOR PERFORMANCE
Comparative analysis of human and subhuman operator performance in a control loop
A82-33759

On the measuring of contact forces between human body and equipment
A82-33767

Vibration machines and man
A82-33770

The direction of the process of computer operator training
A82-34690

Driving experience and task demands in simulator and instrumented car: A validation study
[IZF-1980-9] N82-24830

Operator performance on two office data entry system testbeds: Preliminary analyses
[AD-A111535] N82-25795

OPERATORS (PERSONNEL)
Modern problems of vibrations in the systems 'man-machine-environment'
A82-33752

Basic principles for hygienic rating of industrial whole-body vibration in the U.S.S.R.
A82-33757

OPTICAL ILLUSION
Effect of different runway sizes on pilot performance during simulated night landing approaches
A82-32008

OPTICAL TRACKING
Comparative analysis of human and subhuman operator performance in a control loop
A82-33759

OPTIMAL CONTROL
Predicting pilot opinion ratings of flying qualities of highly control augmented aircraft using an optimal pilot model
[AD-A111136] N82-24837

OPTIMIZATION
Optimization of stochastic man-machine systems
A82-33769

OPTOMETRY
Purkinje image eyetracking: A market survey
[NASA-CR-166338] N82-25779

ORBITAL SPACE STATIONS
Working in space
A82-33909

ORBITAL WORKSHOPS
Working in space
A82-33909

ORGANIC COMPOUNDS
Comets - Chemistry and chemical evolution
A82-33280

ORGANIC PHOSPHORUS COMPOUNDS
Glyceroaldehyde phosphatedehydrogenase from human muscles in atherosclerosis
A82-34601

ORTHOSTATIC TOLERANCE
Venous pressure as an indicator of circulating blood volume
N82-25777

OTOLOGY
Significance of the rehydration rate of the inner ear in the choice of method of surgical intervention in the endolymphatic system in Meniere's disease
A82-34473

Hormone levels in the blood of patients with Meniere's disease and cochleovestibulopathies
A82-34475

OXYGEN METABOLISM
Comparative study of the gas-transport characteristics of models of an extraerythrocytic oxygen carrier
A82-34680

OXYGEN TENSION
Microcirculation and oxygen tension in the rat brain cortex during hemorrhagic shock
A82-34683

P

PAIN
Lipid peroxidation and retinal damage under stress
A82-34682

PATHOLOGICAL EFFECTS
An analysis of the risk of human cardiac damage during +Gz stress - A review
A82-32001

The pathophysiology, presentation, and triage of altitude-related decompression sickness associated with hypobaric chamber operation
A82-32012

PATTERN RECOGNITION
Recognition of thermal images - Effects of scan-line density and signal-to-noise ratio
A82-32529

The roles of axes of symmetry in orientation illusions
A82-33749

PEPTIDES
Enzymatic characterization of peptidic materials isolated from aqueous solutions of ammonium cyanide /pH9/ and hydrocyanic acid /pH6/ exposed to ionizing radiation
A82-33277

PERCEPTION
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program basic research
[AD-A111057] N82-24827

PERFORMANCE PREDICTION
Individual differences in dual task performance
[AD-A110768] N82-24826

PERIPHERAL CIRCULATION
Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-33758

Studies on the property and transplantation of haemopoietic stem cells from peripheral blood
A82-34247

PERIPHERAL NERVOUS SYSTEM
Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-33758

PERSPIRATION
Central and peripheral inputs in sweating regulation during thermal transients
A82-32830

PH
Effect of pH on sensation and vastus lateralis electromyogram during cycling exercise
A82-32835

PHOSPHORUS
Effects of 1 alpha-hydroxycholecalciferol and different amounts of phosphorus in food allowance on some parameters of phosphorus and calcium metabolism in hypokinetic rats
N82-25762

PHOSPHORUS METABOLISM
Effects of 1 alpha-hydroxycholecalciferol and different amounts of phosphorus in food allowance on some parameters of phosphorus and calcium metabolism in hypokinetic rats
N82-25762

PHOSPHORYLATION
Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with crista membrane fragments of mitochondria
A82-33595

PHOTOSYNTHESIS
  Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin
    A82-32692
  Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with crista membrane fragments of mitochondria
    A82-33595
  Magnetic-field effect on photophysical processes in the light-harvesting pigment apparatus of purple photosynthetic bacteria
    A82-34917

PHYSICAL EXERCISE
  Hemodynamic response during combined tilt table-isometric exercise test and +Gz acceleration tolerance
    A82-31832
  Characteristics of adjustment of lung diffusing capacity to work
    A82-32827
  Effect of training on beta-adrenergic receptor number in rat heart
    A82-32828
  Effect of pH on sensation and vastus lateralis electromyogram during cycling exercise
    A82-32835
  Acute hypervolemia, cardiac performance, and aerobic power during exercise
    A82-32836
  Dynamics of cardiac, respiratory, and metabolic function in men in response to step work load
    A82-32837
  Increases in plasma beta-endorphin/beta-lipotropin immunoreactivity after treadmill running in humans
    A82-32839
  A computer linear regression model to determine ventilatory anaerobic threshold
    A82-32843
  The prevention of dysadaptive changes in sailors at sea
    A82-33720

PHYSICAL FITNESS
  Effect of aerobic conditioning on cardiovascular response to isometric exercise
    A82-32841
  The efficiency of the training of young athletes when vitamins and trace elements are included in their diet
    A82-34693

PHYSICIANS
  Support role of aviation physicians
    N82-24809

PHYSIOLOGICAL EFFECTS
  Acceleration-induced atrioventricular dissociation - Hemodynamic consequences
    A82-32002
  Human tracking performance changes during combined +Gz and + or - Gy stress
    A82-32003
  The pathophysiology, presentation, and triage of altitude-related decompression sickness associated with hypobaric chamber operation
    A82-32012
  Effect of limb immobilization on skeletal muscle
    A82-32826
  Effect of training on beta-adrenergic receptor number in rat heart
    A82-32828
  Mechanical properties of rat lung during prolonged hypercapnia
    A82-32831
  Effects of hyperventilation on pulmonary blood flow and recirculation time of humans
    A82-32832
  Finger temperature after a finger-cooling test - Influence of air temperature and smoking
    A82-32833
  Effects of acute cold exposure on muscle amino acid and protein in rats
    A82-32840
  Industrial hygiene and the prophylaxis of occupational diseases in work with lasers --- Russian book
    A82-33394
  Mechanoreceptor systems of the organism from the viewpoint of vibrational biomechanics
    A82-33755
  Immediate effects of vibration transmitted to the hand
    A82-33756
  Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
    A82-33758
  Effects of traumatic shock on cytogenetic processes in the epithelial cells of the cornea and tongue and the bone marrow cells of albino rats
    A82-34676
  The effect of repeated sublethal overheating on cytogenetic processes in the epithelium of the cornea and in bone marrow cells in white rats
    A82-34685
  Clinicophysiological changes in man during long-term antiorthostatic hypokinesia
    N82-25761
  Influence of level of mineralization of desalinated, high quality water of the hydrocarbonate class on functional state of male white rat gonads
    N82-25763
  Inquiry of field experience with caps for the Royal Dutch Army
  [IZF-1981-21]
    N82-25799

PHYSIOLOGICAL FACTORS
  Problems of human biology in Polish polar research
    A82-31837

PHYSIOLOGICAL RESPONSES
  Women at altitude - Cardiovascular responses to hypoxia
    A82-32009
  Sex differences in cardiac responses to successive apnea periods
    A82-32011
  Central and peripheral inputs in sweating regulation during thermal transients
    A82-32830
  Acute hypervolemia, cardiac performance, and aerobic power during exercise
    A82-32836
  Dynamics of cardiac, respiratory, and metabolic function in men in response to step work load
    A82-32837
  Increases in plasma beta-endorphin/beta-lipotropin immunoreactivity after treadmill running in humans
    A82-32839
  Effect of aerobic conditioning on cardiovascular response to isometric exercise
    A82-32841
  Modern problems of vibrations in the systems 'man-machine-environment'
    A82-33752
  Dynamic modeling and vibratory response of human subjects in heave mode
    A82-33761
  Vibration defence of man - Questions of modeling
    A82-33764

PHYSIOLOGICAL TESTS
  Hemodynamic response during combined tilt table-isometric exercise test and +Gz acceleration tolerance
    A82-31832
  Stress testing and coronary artery disease - Study of 140 cases on tread mill
    A82-32288
  The prognostic value of the glucose tolerance test
    A82-34698

PILOT PERFORMANCE
  Central nervous system reactivity in the image of the visual evoked potential and the perceptual-motor performance of pilots and cosmonaut candidates under conditions of sleep deprivation
    A82-31831
  Human tracking performance changes during combined +Gz and + or - Gy stress
    A82-32003
  Effect of different runway sizes on pilot performance during simulated night landing approaches
    A82-32008

Psychosomatic self-regulation - An effective method for sustaining pilot work capacity during a prolonged flight A82-33727
Studies of planning behavior of aircraft pilots in normal, abnormal, and emergency situations --- Book A82-33905

PILOT SELECTION
The aerospace screening electroencephalogram - An analysis of benefits and costs in the U.S. Air Force A82-32013

PILOTS (PERSONNEL)
Psychological aspects of aerospace orientation N82-24258
Support role of aviation physicians N82-24809
Performance measurement and Navy's Tactical Aircrew Training System [AD-A110665] N82-25786

PLANNING
Studies of planning behavior of aircraft pilots in normal, abnormal, and emergency situations --- Book A82-33905

PLANTS (BOTANY)
Development of guayule (parthenium argentatum) [NASA-CR-168926] N82-24812
Plant diversity to support humans in a CELSS ground based demonstrator [NASA-CR-168918] N82-24833
Controlled Ecological Life Support System: Use of Higher Plants [NASA-CP-2231] N82-24834
Controlled Ecological Life Support System: Research and Development Guidelines [NASA-CP-2232] N82-24835
Controlled ecological life support system - biological problems [NASA-CP-2233] N82-24836

POISONS
Problems in the therapy of soman poisoning [NBL-1981-1] N82-24824

POLAR REGIONS
Problems of human biology in Polish polar research A82-31837

POLARIZED RADIATION
Role of polarization and resonance in assessing the biological effects of electromagnetic radiation N82-25775

POLYNUCLEOTIDES
Oligonucleotide formation catalyzed by mononucleotide matrices A82-33284

POLYPEPTIDES
Regulation of the functional activity of stem cells which are the precursors of granulomonopoiesis by polypeptide thymic and bone marrow factors A82-34684

POTABLE WATER
A hygienic assessment of the possibility of using 1,3-dichloro-5,5-dimethylhydantoin for disinfecting drinking water A82-34694
Influence of level of mineralization of desalinated, high quality water of the hydrocarbonate class on functional state of male white rat gonads N82-25763

POTASSIUM
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium N82-24822

PRECAMBRIAN PERIOD
Pyrolysis of Precambrian kerogens - Constraints and capabilities A82-33288

PRESSURE DISTRIBUTION
Torso experienced aerodynamic forces experienced during ejection [AD-A098942] N82-24823

PRESSURE MEASUREMENT
On the measuring of contact forces between human body and equipment A82-33767

PRESSURE REDUCTION
Deep-sea bacteria - Isolation in the absence of decompression A82-32800

PRESSURIZED CABINS
Man's adaptive reactions to acoustic parameters of isolated habitats N82-25773

PRIMITIVE EARTH ATMOSPHERE
Organic synthesis from reducing models of the atmosphere of the primitive earth with UV light and electric discharges A82-33282
Synthesis of phosphatidylcholine under possible primitive earth conditions A82-33285

PROGNOSIS
The prognostic value of the glucose tolerance test A82-34698

PROGRAMMING LANGUAGES
The representation of knowledge: Pask's L sub p --- artificial intelligence N82-25793

PROPHYLAXIS
Industrial hygiene and the prophylaxis of occupational diseases in work with lasers --- Russian book A82-33394

PROSTAGLANDINS
Dynamics of changes in the prostaglandin content of the brain tissue under cervical sympathectomy and circulatory hypoxia A82-34677

PROTECTIVE CLOTHING
Cold weather goggles. 1: Optical evaluation [AD-A111333] N82-25794
Inquiry of field experience with caps for the Royal Dutch Army [IZF-1981-21] N82-25795

PROTEIN METABOLISM
Effects of acute cold exposure on muscle amino acid and protein in rats A82-32840

PROTEIN SYNTHESIS
Interaction between ATP, metal ions, glycine, and several minerals A82-33283
Oligonucleotide formation catalyzed by mononucleotide matrices A82-33284
Synthesis of phosphatidylcholine under possible primitive earth conditions A82-33285

PROTEINS
Elemental analysis of samples of biological origin relative to their protein content by means of charged particle bombardment [KFKI-1981-26] N82-25752

PROTOBIOLOGY
Binding of nickel /II/ to 5-prime-nucleoside monophosphates and related compounds --- role in origin of life A82-33278
Comets - Chemistry and chemical evolution A82-33280
Interaction between ATP, metal ions, glycine, and several minerals A82-33283
Oligonucleotide formation catalyzed by mononucleotide matrices A82-33284
Synthesis of phosphatidylcholine under possible primitive earth conditions A82-33285
Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions A82-33286
A theory for the origin of a self-replicating chemical system. II - Computer simulation of the autogen A82-33287

PROVISIONING
Diet of crew in Salyut-6 orbital station N82-25756
Biological value and shelf life of cultured dairy products in the diet of cosmonauts N82-25759

PSYCHOLOGICAL EFFECTS
Sociological aspects of permanent manned occupancy of space
A82-33910

PSYCHOLOGICAL FACTORS
The level of group development as a factor influencing the relation between group size and successfulness
A82-34689

PSYCHOMOTOR PERFORMANCE
Individual differences in dual task performance
[AD-A110768] N82-24826

PSYCHOSOMATICS
Psychosomatic self-regulation - An effective method for sustaining pilot work capacity during a prolonged flight
A82-33727

PULMONARY CIRCULATION
Effects of hyperventilation on pulmonary blood flow and recirculation time of humans
A82-32832

PULMONARY FUNCTIONS
Characteristics of adjustment of lung diffusing capacity to work
A82-32027

PURINES
Binding of nickel /II/ to 5-prime-nucleoside monophosphates and related compounds --- role in origin of life
A82-33278

PYROLYSIS
Pyrolysis of Precambrian kerogens - Constraints and capabilities
A82-33288

R

RADAR TARGETS
Analysis of the polarization dependence of the interaction between human frame targets and radio frequency sensor fields
[AD-A111590] N82-25796

RADIATION ABSORPTION
Role of polarization and resonance in assessing the biological effects of electromagnetic radiation
N82-25775

RADIATION DAMAGE
The nature of radiation damage of haemopoietic stem cells under continuous irradiation at low dose rate
A82-33600

RADIATION DOSAGE
The nature of radiation damage of haemopoietic stem cells under continuous irradiation at low dose rate
A82-33600

Role of polarization and resonance in assessing the biological effects of electromagnetic radiation
N82-25775

RADIATION EFFECTS
Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin
A82-32692

Enzymatic characterization of peptidic materials isolated from aqueous solutions of ammonium cyanide /pH9/ and hydrocyanic acid /pH6/ exposed to ionizing radiation
A82-33277

Studies on the property and transplantation of haemopoietic stem cells from peripheral blood
A82-34247

The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity
A82-34768

RADIATION SHIELDING
Inquiry of field experience with caps for the Royal Dutch Army
[IZF-1981-21] N82-25799

RADIATION SICKNESS
USSR Report. Life sciences: Biomedical and behavioral sciences, no. 14
[JPRS-79973] N82-24806

Postradiation recovery of human bone marrow and morphological dynamics of undifferentiated cell pool
N82-24811

RADIOBIOLOGY
Studies on the property and transplantation of haemopoietic stem cells from peripheral blood
A82-34247

Ultracytochemical changes in the brain and liver under the influence of low-intensity nonionizing microwave radiation
A82-34687

The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity
A82-34768

Biotropic parameters of magnetic fields
N82-24810

RADIOPATHOLOGY
Postradiation recovery of human bone marrow and morphological dynamics of undifferentiated cell pool
N82-24811

RANGES (FACILITIES)
Performance measurement and Navy's Tactical Aircrew Training System
[AD-A110669] N82-25786

RATINGS
Basic principles for hygienic rating of industrial whole-body vibration in the U.S.S.R.
A82-33757

RATS
Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats
[NRL-1980-4] N82-24814

Inhalation studies with benzene in rats. Part A: Toxicological data
N82-24815

Inhalation studies with benzene in rats. Part B: Immunological data
N82-24816

Inhalation studies with halothane in female rats. Part A: Toxicological data
N82-24817

Inhalation study with halothane in female rats. Part B: Immunological data
N82-24818

The effects of some drugs on the survival of rats in various stages of hemorrhagic shock
[NRL-1981-7] N82-25753

Functional state of rat gastrointestinal tract organs following flight in Cosmos-1129 biosatellite
N82-25765

Amino acids of femoral quadriceps of rats following flight aboard the Cosmos-936 biosatellite
N82-25766

RECONSTRUCTION
Reconstruction of spatial information in the human visual system
A82-34830

REDUCED GRAVITY
Third decade of space biology
N82-25755

REDUCTION (CHEMISTRY)
Organic synthesis from reducing models of the atmosphere of the primitive earth with UV light and electric discharges
A82-33282

REFLEXES
Effects of muscle vibration and joint oscillation on human motor mechanisms
A82-33753

REGENERATION (PHYSIOLOGY)
Development of guayule (parthenium argentatum)
[NASA-CR-168926] N82-24812

REGRESSION ANALYSIS
A computer linear regression model to determine ventilatory anaerobic threshold
A82-32843

REPRODUCTION (BIOLOGY)
Ultrastructural changes in central nervous system cells induced by arboviruses
N82-24807

RESEARCH MANAGEMENT
The use of animals in medical research and testing
[GPO-87-598] N82-24813

RESONANCE
  Role of polarization and resonance in assessing the biological effects of electromagnetic radiation
  N82-25775
RESPIRATION
  Sex differences in cardiac responses to successive apnea periods
  A82-32011
  Thermoregulatory influences on common carotid blood flow in the dog
  A82-32829
  Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats
  [MBL-1980-4] N82-24814
  Inhalation studies with benzene in rats. Part A: Toxicological data
  N82-24815
  Inhalation studies with benzene in rats. Part B: Immunological data
  N82-24816
  Inhalation studies with halothane in female rats. Part A: Toxicological data
  N82-24817
  Inhalation study with halothane in female rats. Part B: Immunological data
  N82-24818
  Toxic hazards research unit
  [AD-A110587] N82-25780
RESPIRATORY PHYSIOLOGY
  Mechanical properties of rat lung during prolonged hypercapnia
  A82-32831
RESPIRATORY RATE
  Dynamics of cardiac, respiratory, and metabolic function in men in response to step work load
  A82-32837
  A computer linear regression model to determine ventilatory anaerobic threshold
  A82-32843
RETINA
  Lipid peroxidation and retinal damage under stress
  A82-34682
RETINAL IMAGES
  Eye modelling
  A82-32525
  Purkinje image eyetracking: A market survey
  [NASA-CR-166338] N82-25779
RIBONUCLEIC ACIDS
  Taxonomic relations between archaebacteria including 6 novel genera examined by cross hybridization of DNAs and 16S rRNAs
  A82-33276
ROCKET PROPELLANTS
  Toxic hazards research unit
  [AD-A110587] N82-25780
RUNWAY CONDITIONS
  Effect of different runway sizes on pilot performance during simulated night landing approaches
  A82-32008

S

SACCADIC EYE MOVEMENTS
  Brain mechanisms of visual attention
  A82-32075
SATELLITE-BORNE INSTRUMENTS
  Space biology and medicine
  A82-34695
SCANNING
  Recognition experiments with thermal images. Part 2: Effect of raster frequency --- raster scanned images
  [IZF-1980-14] N82-25788
SEA WATER
  Deep-sea bacteria - Isolation in the absence of decompression
  A82-32800
SEARCHING
  Distraction in visual search
  [IZF-1981-7] N82-24830
  Search times in two-dimensional tables
  [IZF-1981-10] N82-24832
SENSORIMOTOR PERFORMANCE
  Central nervous system reactivity in the image of the visual evoked potential and the perceptual-motor performance of pilots and cosmonaut candidates under conditions of sleep deprivation
  A82-31831
  Neurophysiological characteristics of sensorimotor cortex of rats submitted to early motor deprivation and conditioning
  N82-25770
SENSORY DEPRIVATION
  Neurophysiological characteristics of sensorimotor cortex of rats submitted to early motor deprivation and conditioning
  N82-25770
SENSORY PERCEPTION
  Effect of pH on sensation and vastus lateralis electromyogram during cycling exercise
  A82-32835
  Electrometric characteristics of man's gastrolingual reflex
  N82-25778
SERUMS
  Features of the reaction of the blood serum of a healthy person with epidermis
  A82-34678
SEX FACTOR
  Sex differences in cardiac responses to successive apnea periods
  A82-32011
SHOCK (PHYSIOLOGY)
  Effects of traumatic shock on cytogenetic processes in the epithelial cells of the cornea and tongue and the bone marrow cells of albino rats
  A82-34676
  Microcirculation and oxygen tension in the rat brain cortex during hemorrhagic shock
  A82-34683
  The effects of some drugs on the survival of rats in various stages of hemorrhagic shock
  [MBL-1981-7] N82-25753
  Survey of the experimental shock research performed at the Medical Biological Laboratory TNO and at the Pharmacological Laboratory, University of Amsterdam
  [MBL-1981-9] N82-25782
SIGNAL TO NOISE RATIOS
  Recognition of thermal images - Effects of scan-line density and signal-to-noise ratio
  A82-32529
  Recognition experiments with thermal images. Part 4: Effect of signal to noise ratio
  [IZF-1981-8] N82-24831
SITTING POSITION
  Some problems of identification and modelling of the human body
  A82-33762
SIZE (DIMENSIONS)
  Effect of different runway sizes on pilot performance during simulated night landing approaches
  A82-32008
SKIN (ANATOMY)
  Toxic hazards research unit
  [AD-A110587] N82-25780
SKIN GRAFTS
  USSR Report. Life sciences: Biomedical and behavioral sciences, no. 14
  [JPRS-79973] N82-24806
  Pigskin xenografts in treatment of patients with extensive burns
  N82-24808
SKIN TEMPERATURE (BIOLOGY)
  Central and peripheral inputs in sweating regulation during thermal transients
  A82-32830
  Finger temperature after a finger-cooling test - Influence of air temperature and smoking
  A82-32833
SKYLAB PROGRAM
  Working in space
  A82-33909
SLEEP
  Human body clocks and the timing of sleep
  A82-32213

Local cerebral glucose utilization in non-rapid eye movement sleep
A82-34831

SLEEP DEPRIVATION
Central nervous system reactivity in the image of the visual evoked potential and the perceptual-motor performance of pilots and cosmonaut candidates under conditions of sleep deprivation
A82-31831

SNELLEN TESTS
Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts
A82-32010

SOCIAL FACTORS
The level of group development as a factor influencing the relation between group size and successfulness
A82-34689

SOCIAL ISOLATION
The effects of social isolation on human functioning
A82-31830

SOCIOLOGY
Sociological aspects of permanent manned occupancy of space
A82-33910

SODIUM
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822

SOLAR ENERGY CONVERSION
Solar bacterial biomass farm for space vehicles
A82-33895

SOLAR RADIATION
Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin
A82-32692

SOUND PRESSURE
Recommendations to avoid hearing damage during firing of the M198, FH70, M71 and FH77 towed horwitzers
[IZF-1981-13] N82-25784

SPACE FLIGHT FEEDING
Plant diversity to support humans in a CELSS ground based demonstrator
[NASA-CR-166910] N82-24833
Controlled Ecological Life Support System: Use of Higher Plants
[NASA-CP-2231] N82-24834
Controlled Ecological Life Support System: Research and Development Guidelines
[NASA-CP-2232] N82-24835
USSR report: Space biology and aerospace medicine, volume 16, no. 2, March - April 1982
[JPRS-80822] N82-25754
Diet of crew in Salyut-6 orbital station
N82-25756

SPACE FLIGHT STRESS
The effects of social isolation on human functioning
A82-31830
Sociological aspects of permanent manned occupancy of space
A82-33910

SPACE INDUSTRIALIZATION
Solar bacterial biomass farm for space vehicles
A82-33895
Working in space
A82-33909

SPACE PERCEPTION
Reconstruction of spatial information in the human visual system
A82-34830
A computational model of binocular depth perception
A82-34834

SPACE RATIONS
Biological value and shelf life of cultured dairy products in the diet of cosmonauts
N82-25759

SPACE TRANSPORTATION SYSTEM
Working in space
A82-33909

SPACE TRANSPORTATION SYSTEM 2 FLIGHT
STS-2 medical report
[NASA-TM-58245] N82-25751

SPACEBORNE EXPERIMENTS
Biological experiments in space biology and gravitation
A82-32349
Space biology and medicine
A82-34695
Third decade of space biology
N82-25755

SPACECRAFTS
Sociological aspects of permanent manned occupancy of space
A82-33910

SPACELAB PAYLOADS
Biological experiments in space biology and gravitation
A82-32349

SPECTRAL SIGNATURES
Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin
A82-32692

SPEECH RECOGNITION
The effect of noise-induced hearing loss on the ability to understand speech
[IZF-1981-11] N82-25783

SPLEEN
Effect of thymalin on the system of cyclic nucleotides in the mouse spleen
A82-34679

STATISTICAL ANALYSIS
Statistical examination of hearing loss due to gunfire noise and industrial noise: Consequences for screening audiometry with fixed frequencies
[IZF-1981-20] N82-25785

STIFFNESS
The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests
A82-33760

STOCHASTIC PROCESSES
Optimization of stochastic man-machine systems
A82-33769

STORAGE STABILITY
Biological value and shelf life of cultured dairy products in the diet of cosmonauts
N82-25759

STRESS (PHYSIOLOGY)
An analysis of the risk of human cardiac damage during +Gz stress - A review
A82-32001
Stress testing and coronary artery disease - Study of 140 cases on tread mill
A82-32288
A longitudinal analysis of TH Index and identification of period of acute heat stress
A82-32290
The effects of hypoxia on serial response time
A82-32390
Increases in plasma beta-endorphin/beta-lipotropin immunoreactivity after treadmill running in humans
A82-32839
Effect of base oscillations on the human skeletal muscle and joint forces in a standing posture
A82-33754
Effects of traumatic shock on cytogenetic processes in the epithelial cells of the cornea and tongue and the bone marrow cells of albino rats
A82-34676

STRESS (PSYCHOLOGY)
Lipid peroxidation and retinal damage under stress
A82-34682
Stress, information processing and diving
[IZF-1981-4] N82-24829

STRUCTURAL VIBRATION
Man under vibration: Suffering and protection --- Book
A82-33751
A survey of vibration control methods
A82-33768
Optimization of stochastic man-machine systems
A82-33769

SURGERY
Dynamics of changes in the prostaglandin content of the brain tissue under cervical sympathectomy and circulatory hypoxia
A82-34677

SURVIVAL
The effects of some drugs on the survival of rats in various stages of hemorrhagic shock
[MBL-1981-7] N82-25753
SYMMETRY
The roles of axes of symmetry in orientation illusions
A82-33749
SYMPATHETIC NERVOUS SYSTEM
Dynamics of changes in the prostaglandin content of the brain tissue under cervical sympathectomy and circulatory hypoxia
A82-34677
SYNTHESIS (CHEMISTRY)
Organic synthesis from reducing models of the atmosphere of the primitive earth with UV light and electric discharges
A82-33282
SYSTEM IDENTIFICATION
Some problems of identification and modelling of the human body
A82-33762
SYSTEMS ENGINEERING
Optimization of stochastic man-machine systems
A82-33769
SYSTOLE
Acceleration-induced atrioventricular dissociation - Hemodynamic consequences
A82-32002

T

TABLES (DATA)
Search times in two-dimensional tables
[IZF-1981-10] N82-24832
TACHYCARDIA
Sex differences in cardiac responses to successive apnea periods
A82-32011
TACTILE DISCRIMINATION
Test for the study of the efficiency of the tactile-motor analyzer
A82-34691
TARGET MASKING
User response characteristics for sequential displays
A82-32496
TARGET RECOGNITION
Distraction in visual search
[IZF-1981-7] N82-24830
Recognition experiments with thermal images. Part 4: Effect of signal to noise ratio
[IZF-1981-8] N82-24831
TASK COMPLEXITY
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task
A82-32005
A rationale for the development of cut-off scores --- task mastering
[IZF-1981-3] N82-24828
TASKS
Individual differences in dual task performance
[AD-A110768] N82-24826
Contingent decision behavior: A review and discussion of issues
[AD-A111655] N82-25787
TASTE
Electrometric characteristics of man's gastrolingual reflex
N82-25778
TAXONOMY
Taxonomic relations between archaebacteria including 6 novel genera examined by cross hybridization of DNAs and 16S rRNAs
A82-33276
TEMPERATURE EFFECTS
Effects of acute cold exposure on muscle amino acid and protein in rats
A82-32840
The effect of repeated sublethal overheating on cytogenetic processes in the epithelium of the cornea and in bone marrow cells in white rats
A82-34685
TEMPERATURE GRADIENTS
Central and peripheral inputs in sweating regulation during thermal transients
A82-32830
THERAPY
Industrial hygiene and the prophylaxis of occupational diseases in work with lasers --- Russian book
A82-33394
USSR Report. Life sciences: Biomedical and behavioral sciences, no. 14
[JPRS-79973] N82-24806
Pigskin xenografts in treatment of patients with extensive burns
N82-24808
THERMAL COMFORT
A longitudinal analysis of TH Index and identification of period of acute heat stress
A82-32290
THERMAL MAPPING
Recognition of thermal images - Effects of scan-line density and signal-to-noise ratio
A82-32529
Recognition experiments with thermal images. Part 2: Effect of raster frequency --- raster scanned images
[IZF-1980-14] N82-25788
Recognition experiments with thermal images. Part 3: Effect of contrast rendition
[IZF-1981-5] N82-25789
THERMAL RADIATION
Recognition experiments with thermal images. Part 4: Effect of signal to noise ratio
[IZF-1981-8] N82-24831
THERMOREGULATION
Thermoregulatory influences on common carotid blood flow in the dog
A82-32829
Central and peripheral inputs in sweating regulation during thermal transients
A82-32830
THYMUS GLAND
Effect of thymalin on the system of cyclic nucleotides in the mouse spleen
A82-34679
Regulation of the functional activity of stem cells which are the precursors of granulomonopoiesis by polypeptide thymic and bone marrow factors
A82-34684
TIME DEPENDENCE
Sex differences in cardiac responses to successive apnea periods
A82-32011
TIME RESPONSE
The effects of hypoxia on serial response time
A82-32390
TISSUES (BIOLOGY)
Velocity and attenuation of sound in arterial tissues
A82-32823
Mineral phase and protein matrix of rat osseous tissue following flight aboard the Cosmos-1129 biosatellite
N82-25769
TOMOGRAPHY
Iterative reconstruction-reprojection - An algorithm for limited data cardiac-computer tomography
A82-32879
TOOLS
Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-33758
TOXIC HAZARDS
Toxic hazards research unit
[AD-A110587] N82-25780
TOXICITY
Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats
[MBL-1980-4] N82-24814
Inhalation study with halothane in female rats. Part B: Immunological data
N82-24816
TOXICOLOGY
Inhalation studies with benzene in rats. Part A: Toxicological data
N82-24815

Inhalation studies with benzene in rats. Part B: Immunological data
N82-24816

Inhalation studies with halothane in female rats. Part A: Toxicological data
N82-24817

**TRACKING (POSITION)**
Human tracking performance changes during combined +Gz and + or - Gy stress
A82-32003

**TRAINING ANALYSIS**
The direction of the process of computer operator training
A82-34690

**TRANSDUCERS**
On the measuring of contact forces between human body and equipment
A82-33767

**TRANSIENT HEATING**
Central and peripheral inputs in sweating regulation during thermal transients
A82-32830

**TRANSLATIONAL MOTION**
Discomfort judgments of translational and angular whole-body vibrations
A82-32006

**TREADMILLS**
Stress testing and coronary artery disease - Study of 140 cases on tread mill
A82-32288

**TUMORS**
Some physiological and biochemical features of cells of carrot gall developed in weightlessness
N82-25764

## U

**U.S.S.R.**
Basic principles for hygienic rating of industrial whole-body vibration in the U.S.S.R.
A82-33757

Plasma and tissue lipids of rats following flight aboard Cosmos-936 biosatellite
N82-25767

Plasma and tissue lipids of rats following flight aboard the Cosmos-1129 biosatellite
N82-25768

Mineral phase and protein matrix of rat osseous tissue following flight aboard the Cosmos-1129 biosatellite
N82-25769

Neurophysiological characteristics of sensorimotor cortex of rats submitted to early motor deprivation and conditioning
N82-25770

Man's adaptive reactions to acoustic parameters of isolated habitats
N82-25773

Age-related distinctions of echocardiographic parameters of healthy man
N82-25774

Role of polarization and resonance in assessing the biological effects of electromagnetic radiation
N82-25775

Sympathoadrenal system of cosmonauts following 7-day flights
N82-25776

Venous pressure as an indicator of circulating blood volume
N82-25777

Electrometric characteristics of man's gastrolingual reflex
N82-25778

**U.S.S.R. SPACE PROGRAM**
Space biology and medicine
A82-34695

**ULTRASONIC WAVE TRANSDUCERS**
Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation
A82-32080

**UREAS**
Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821

## V

**VACUUM CHAMBERS**
The pathophysiology, presentation, and triage of altitude-related decompression sickness associated with hypobaric chamber operation
A82-32012

**VEINS**
Induced venous pooling and cardiorespiratory responses to exercise after bed rest
A82-32042

**VERTEBRAE**
Mechanism of vertebral fracture in the F/FB-111 ejection experience
A82-32004

**VERTICAL MOTION**
Some problems of identification and modelling of the human body
A82-33762

**VERTICAL PERCEPTION**
Psychological aspects of aerospace orientation
N82-24258

**VESTIBULAR NYSTAGMUS**
A caloric vestibular test using air
A82-34474

**VESTIBULAR TESTS**
A caloric vestibular test using air
A82-34474

**VESTIBULES**
Hormone levels in the blood of patients with Meniere's disease and cochleovestibulopathies
A82-34475

Distribution of nucleolar nucleic acids in Purkinje cells under vestibular stimulation and immobilization of rats
A82-34686

**VESTS**
Auxiliary cooling: Comparison of air-cooled versus water cooled vests in hot-dry and hot-wet environments
[AD-A110554]
N82-25797

**VIBRATION DAMPING**
Man under vibration: Suffering and protection --- Book
A82-33751

A survey of vibration control methods
A82-33760

**VIBRATION EFFECTS**
Discomfort judgments of translational and angular whole-body vibrations
A82-32006

Man under vibration: Suffering and protection --- Book
A82-33751

Modern problems of vibrations in the systems 'man-machine-environment'
A82-33752

Effects of muscle vibration and joint oscillation on human motor mechanisms
A82-33753

Mechanoreceptor systems of the organism from the viewpoint of vibrational biomechanics
A82-33755

Immediate effects of vibration transmitted to the hand
A82-33756

Basic principles for hygienic rating of industrial whole-body vibration in the U.S.S.R.
A82-33757

Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-33758

Comparative analysis of human and subhuman operator performance in a control loop
A82-33759

Dynamic modeling and vibratory response of human subjects in heave mode
A82-33761

Some problems of identification and modelling of the human body
A82-33762

Non-linear effects connected with the spatial vibrations of biomechanical systems
A82-33763

Vibration defence of man - Questions of modeling
A82-33764

Automatic system for study and measurement of vibration parameters affecting human body
A82-33765
Critical assessment of common methods to determine vibrational stress of hand-arm system
A82-33766
On the measuring of contact forces between human body and equipment
A82-33767
Vibration machines and man
A82-33770

**VIBRATION ISOLATORS**
Man under vibration: Suffering and protection --- Book
A82-33751
Modern problems of vibrations in the systems 'man-machine-environment'
A82-33752
Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-33758
Vibration defence of man - Questions of modeling
A82-33764
A survey of vibration control methods
A82-33768

**VIBRATION MEASUREMENT**
Automatic system for study and measurement of vibration parameters affecting human body
A82-33765
Critical assessment of common methods to determine vibrational stress of hand-arm system
A82-33766

**VIBRATION MODE**
Dynamic modeling and vibratory response of human subjects in heave mode
A82-33761

**VIBRATION PERCEPTION**
Immediate effects of vibration transmitted to the hand
A82-33756

**VIBRATION TESTS**
The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests
A82-33760

**VIBRATIONAL STRESS**
Effect of base oscillations on the human skeletal muscle and joint forces in a standing posture
A82-33754
Critical assessment of common methods to determine vibrational stress of hand-arm system
A82-33766

**VIRUSES**
USSR Report. Life sciences: Biomedical and behavioral sciences, no. 14
[JPRS-79973] N82-24806
Ultrastructural changes in central nervous system cells induced by arboviruses
N82-24807

**VISORS**
Cold weather goggles. 1: Optical evaluation
[AD-A111333] N82-25794

**VISUAL ACUITY**
Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts
A82-32010

**VISUAL DISCRIMINATION**
Distraction in visual search
[IZF-1981-7] N82-24830

**VISUAL PERCEPTION**
Brain mechanisms of visual attention
A82-32075
Perceptual components of computer displays
A82-32413
Eye modelling
A82-32525
The roles of axes of symmetry in orientation illusions
A82-33749
Psychological aspects of aerospace orientation
N82-24250
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program basic research
[AD-A111057] N82-24827
Purkinje image eyetracking: A market survey
[NASA-CR-166330] N82-25779

**VISUAL STIMULI**
Brain mechanisms of visual attention
A82-32075
User response characteristics for sequential displays
A82-32896
Reconstruction of spatial information in the human visual system
A82-34030

**VISUAL TASKS**
The effects of hypoxia on serial response time
A82-32390
Distraction in visual search
[IZF-1981-7] N82-24830

**VITAMINS**
The efficiency of the training of young athletes when vitamins and trace elements are included in their diet
A82-34693

## W

**WASTE TREATMENT**
Controlled ecological life support system - biological problems
[NASA-CP-2233] N82-24836

**WATER TREATMENT**
A hygienic assessment of the possibility of using 1,3-dichloro-5,5-dimethylhydantoin for disinfecting drinking water
A82-34694

**WEIGHTLESSNESS**
Biological experiments in space biology and gravitation
A82-32349
Clinicophysiological changes in men during long-term antiorthostatic hypokinesia
N82-25761
Some physiological and biochemical features of cells of carrot gall developed in weightlessness
N82-25764
Functional state of rat gastrointestinal tract organs following flight in Cosmos-1129 biosatellite
N82-25765
Amino acids of femoral quadriceps of rats following flight aboard the Cosmos-936 biosatellite
N82-25766
Plasma and tissue lipids of rats following flight aboard Cosmos-936 biosatellite
N82-25767
Plasma and tissue lipids of rats following flight aboard the Cosmos-1129 biosatellite
N82-25768
Venous pressure as an indicator of circulating blood volume
N82-25777

**WEIGHTLESSNESS SIMULATION**
Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g
A82-32154

**WORK CAPACITY**
Psychosomatic self-regulation - An effective method for sustaining pilot work capacity during a prolonged flight
A82-33727
The prevention of dysadaptive changes in sailors at sea
A82-33728
Test for the study of the efficiency of the tactile-motor analyzer
A82-34691

**WORKLOADS (PSYCHOPHYSIOLOGY)**
Dynamics of cardiac, respiratory, and metabolic function in men in response to step work load
A82-32837
The direction of the process of computer operator training
A82-34690

**WOUND HEALING**
An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings
A82-34688

X

X RAY FLUORESCENCE
In vivo X-ray fluorescence analysis for medical diagnosis. A non-invasive method for quantitative determination of kidney function after radiographic examinations with iodinated contrast media
[LUNFD6/NFSS-1013/1-21/(1981)] N82-25781

X RAY INSPECTION
Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation
A82-32880

Automatic system for study and measurement of vibration parameters affecting human body
A82-[illegible]
Critical comparison of common methods to determine vibrational stress of hand-arm system
A82-[illegible]
On the mechanics of energy exchange between human body and equipment
A82-[illegible]
Vibration machines and man
A82-[illegible]

VIBRATION ISOLATORS
Man under vibration: Suffering and protection --- Book
A82-[illegible]
Modern problems of vibrations in the system 'man-machine-environment'
A82-[illegible]
Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-[illegible]
Vibration effects on man - Questions of [illegible]
A82-[illegible]
A survey of vibration control methods
A82-[illegible]

VIBRATION MEASUREMENT
Automatic system for study and measurement of vibration parameters affecting human body
A82-[illegible]
Critical comparison of common methods to determine vibrational stress of hand-arm system
A82-[illegible]

VIBRATION MODE
Dynamic modeling for vibratory response of human subjects in heave mode
A82-[illegible]

VIBRATION PERCEPTION
Immediate effects of vibration stimulation in the hand
A82-[illegible]

VIBRATION TESTS
The determination of the equivalent biomechanical characteristics of the [illegible] by vibration tests
A82-[illegible]

VIBRATIONAL STRESS
Effect of body oscillations on the human skeletal muscle and joint forces in a standing posture
A82-[illegible]
Critical comparison of common methods to determine vibrational stress of hand-arm system
A82-[illegible]

VIRUSES
NASA Report: Life sciences; Biomedical and behavioral sciences, no. [illegible]
[illegible]
N82-[illegible]
Ultrastructural changes in central nervous system cells induced by arboviruses
A82-[illegible]

VISORS
Cold weather goggles. 1: Optical evaluation
[AD-[illegible]]
N82-[illegible]

VISUAL ACUITY
Visual acuity in color contrast on cathode ray tubes - Role of luminance, hue, and saturation contrasts
A82-[illegible]

VISUAL DISCRIMINATION
Distraction in visual search
[ISP-1981-3]
N82-[illegible]

VISUAL PERCEPTION
Brain mechanisms of visual attention
A82-[illegible]
Perceptual components of computer displays
A82-[illegible]
Eye scanning
A82-[illegible]
The roles of size and of spacing in [illegible] illusions
A82-[illegible]
Psychological aspects of aerospace [illegible]
A82-[illegible]
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program of basic research
[AD-[illegible]]
N82-[illegible]

# X

X RAY FLUORESCENCE
In vivo X-ray fluorescence analysis for medical diagnosis: A non-invasive method for quantitative determination of [illegible] after radiographic examinations with iodinated contrast media
[illegible]
X RAY INSPECTION
Computerized ultrasonic arteriography - A new technique for imaging the carotid bifurcation
A82-[illegible]
[illegible]
Elimination of alcohol [illegible]
[illegible]
A82-[illegible]
[illegible]
The efficiency of the training of [illegible] than vitamins and trace elements [illegible]
A82-[illegible]

# W

WASTE DISPOSAL
Control of ecological life support system - biological problems
[NASA-CR-[illegible]]
N82-[illegible]

WASTE TREATMENT
A hygienic assessment of the possibility of using [illegible] for disinfecting drinking water
A82-[illegible]

WEIGHTLESSNESS
Biological experiments in space biology and [illegible]
A82-[illegible]
Clinicophysiological changes in man during long-term antiorthostatic hypokinesia
A82-[illegible]
Some physiological and biochemical features of cells of [illegible] grown in weightlessness
A82-[illegible]
Functional state of the gastrointestinal tract organs following flight in Cosmos-1129 biosatellite
A82-[illegible]
[illegible] of rats following flight aboard the Cosmos-936 biosatellite
A82-[illegible]
Blood and tissue lipids of rats following flight aboard Cosmos-1129 biosatellite
A82-[illegible]
Plasma and tissue lipids of rats following flight aboard the Cosmos-1129 biosatellite
A82-[illegible]
Venous pressure as an indicator of circulating blood volume
A82-[illegible]

WEIGHTLESSNESS SIMULATION
Cell morphological, mutagenic, and genetic reactions to 0-g simulation and hyper-g
A82-[illegible]

WORK CAPACITY
Hypnosuggestive self-regulation - An effective method for stabilizing pilot work capacity during a prolonged flight
A82-[illegible]
The prevention of dyspeptic changes in sailors at sea
A82-[illegible]
Test for the study of the efficiency of the tactile motor analyzer
A82-[illegible]

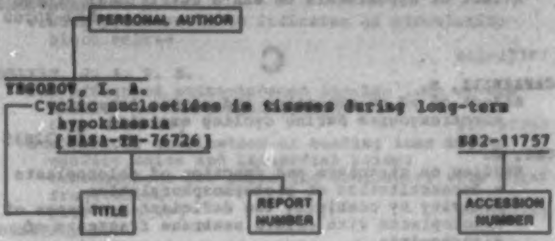
WORKLOADS (PSYCHOPHYSIOLOGY)
Dynamics of cardiac, respiratory, and metabolic function in man in response to step-wise load
A82-[illegible]
The direction of the process of computer operator training
A82-[illegible]

WOUND HEALING
An autoradiographic and [illegible] experimental study of the effect on wound healing of various Soviet dressings
A82-[illegible]

# PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY/*A Continuing Bibliography (Suppl. 236)* SEPTEMBER 1982

## Typical Personal Author Index Listing



The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstact in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ACKLES, K. N.**
The effects of hypoxia on serial response time
A82-32390

**AGARWAL, G. C.**
Effects of muscle vibration and joint oscillation on human motor mechanisms
A82-33753

**AHLERS, I.**
Plasma and tissue lipids of rats following flight aboard Cosmos-936 biosatellite
N82-25767
Plasma and tissue lipids of rats following flight aboard the Cosmos-1129 biosatellite
N82-25768

**ALEKSANDROVA, N. V.**
The carbohydrase system of the small intestine of rats of various ages following heat and cold exposures
A82-33135

**ALFORD, D. K.**
Controlled Ecological Life Support System: Use of Higher Plants
[NASA-CP-2231]
N82-24034

**ALPATOV, I.**
Support role of aviation physicians
N82-24809

**ANDERSON, R. R.**
Spectral character of sunlight modulates photosynthesis of previtamin D3 and its photoisomers in human skin
A82-32692

**ANNIS, J. F.**
Induced venous pooling and cardiorespiratory responses to exercise after bed rest
A82-32842

**APPELMAN, L. M.**
Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats
[MBL-1980-4]
N82-24814
Inhalation studies with benzene in rats. Part A: Toxicological data
N82-24815
Inhalation studies with halothane in female rats. Part A: Toxicological data
N82-24817

**ARTHUR, D. C.**
The pathophysiology, presentation, and triage of altitude-related decompression sickness associated with hypobaric chamber operation
A82-32012

**ARUIN, A. S.**
The determination of the equivalent biomechanical characteristics of the ankle joint muscles by vibration tests
A82-33760

**ARVIKAR, R.**
Effect of base oscillations on the human skeletal muscle and joint forces in a standing posture
A82-33754

**ASLANASOVA, V. I.**
Significance of the rehydration rate of the inner ear in the choice of method of surgical intervention in the endolymphatic system in Meniere's disease
A82-34473

**ASHIGIROVA, N. A.**
Comparative study of the gas-transport characteristics of models of an extraerythrocytic oxygen carrier
A82-34680

## B

**BABIN, A. M.**
Age-related distinctions of echocardiographic parameters of healthy men
N82-25774

**BAKER, M. A.**
Thermoregulatory influences on common carotid blood flow in the dog
A82-32829

**BALASHOV, O. I.**
Influence of level of mineralization of desalinated, high quality water of the hydrocarbonate class on functional state of male white rat gonads
N82-25763

**BALL, E. A.**
Development of guayule (parthenium argentatum)
[NASA-CR-168926]
N82-24812

**BARABANOVA, A. V.**
Postradiation recovery of human bone marrow and morphological dynamics of undifferentiated cell pool
N82-24811

**BARANOV, A. P.**
The effect of repeated sublethal overheating on cytogenetic processes in the epithelium of the cornea and in bone marrow cells in white rats
A82-34685

**BARANOV, V. G.**
The prognostic value of the glucose tolerance test
A82-34698

**BARCHFELD, G. L.**
Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions
A82-33286

**BEDI, J. F.**
Women at altitude - Cardiovascular responses to hypoxia
A82-32009

**BEDENKO, V. S.**
Venous pressure as an indicator of circulating blood volume
N82-25777

**BELAKOVSKIY, M. S.**
Effects of 1 alpha-hydroxycholecalciferol and different amounts of phosphorus in food allowance on some parameters of phosphorus and calcium metabolism in hypokinetic rats
N82-25762

**BELETSKAIA, L. V.**
Features of the reaction of the blood serum of a healthy person with epidermis
A82-34670

BELOKRINITSKII, V. S.
Ultracytochemical changes in the brain and liver under the influence of low-intensity nonionizing microwave radiation
A82-34687
BESSTVOLEDSKAIA, E. F.
Vibration machines and man
A82-33770
BENNETT, G. W.
A computer linear regression model to determine ventilatory anaerobic threshold
A82-32843
BEREGOVOI, A. G.
Psychological aspects of aerospace orientation
N82-28258
BERENDS, F.
Problems in the therapy of soman poisoning [MBL-1981-1]
N82-24824
BETSKII, O. V.
The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity
A82-34768
BHAGAT, P. K.
Comparative analysis of human and subhuman operator performance in a control loop
A82-33759
BIANCHI, G.
Man under vibration: Suffering and protection
A82-33751
BLAAUW, G. J.
Driving experience and task demands in simulator and instrumented car: A validation study [IZF-1980-9]
N82-24838
BLANKENHORN, D. H.
Velocity and attenuation of sound in arterial tissues
A82-32423
BLAZHEEVICH, N. V.
Effects of 1 alpha-hydroxycholecalciferol and different amounts of phosphorus in food allowance on some parameters of phosphorus and calcium metabolism in hypokinetic rats
N82-25762
BLUTH, B. J.
Sociological aspects of permanent manned occupancy of space
A82-33910
BOOTH, F. W.
Effect of limb immobilization on skeletal muscle
A82-32826
BORISOV, V. G.
Pigskin xenografts in treatment of patients with extensive burns
N82-24808
BORTNOVSKII, V. N.
The prevention of dysadaptive changes in sailors at sea
A82-33728
BOSSARD, A. R.
Organic synthesis from reducing models of the atmosphere of the primitive earth with UV light and electric discharges
A82-33282
BRAMMELL, H. L.
Effect of aerobic conditioning on cardiovascular response to isometric exercise
A82-32841
BRIEGLEB, W.
Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g
A82-32154
BRODSKII, V. IA.
Distribution of nucleolar nucleic acids in Purkinje cells under vestibular stimulation and immobilization of rats
A82-34686
BRODY, W. R.
Iterative reconstruction-reprojection - An algorithm for limited data cardiac-computer tomography
A82-32879
BUIANOVSKAIA, O. A.
Hormone levels in the blood of patients with Meniere's disease and cochleovestibulopathies
A82-34675
BULAEV, IU. O.
A caloric vestibular test using air
A82-34674
BULGHERONI, C.
Effects of vibrating tools on the peripheral vessels and the peripheral nervous system in workers of an iron foundry - Preventive suggestions
A82-33758
BUTLER, G. V.
Working in space
A82-33909
BYCHKOV, V. P.
Diet of crew in Salyut-6 orbital station
N82-25756
Effect of hypokinesia on man's nutritional status
N82-25760

C

CAFARELLI, E.
Effect of pH on sensation and vastus lateralis electromyogram during cycling exercise
A82-32835
CAI, J.
Studies on structure and function of chloroplasts - Reconstitution of photophosphorylation activity by combining the deficient membranes of chloroplasts with crista membrane fragments of mitochondria
A82-33595
CANDAS, V.
Central and peripheral inputs in sweating regulation during thermal transients
A82-32830
CARDEN, J. L.
Controlled Ecological Life Support System: Research and Development Guidelines [NASA-CP-2232]
N82-24835
CERNY, F. J.
Characteristics of adjustment of lung diffusing capacity to work
A82-32827
CHIKHLADZE, T. A.
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822
CHIN, H. P.
Velocity and attenuation of sound in arterial tissues
A82-32423
CHLAIDZE, V. I.
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822
CHRISTY, L. F.
Purkinje image eyetracking: A market survey [NASA-CR-166330]
N82-25779
CLEOPHAS, T. J. M.
Finger temperature after a finger-cooling test - Influence of air temperature and smoking
A82-32833
COGOLI, A.
Cell morphological, ontogenic, and genetic reactions to 0-g simulation and hyper-g
A82-32154
CONVERTINO, V. A.
Induced venous pooling and cardiorespiratory responses to exercise after bed rest
A82-32842
COWINGS, P. S.
Reducing motion sickness - A comparison of autogenic-feedback training and an alternative cognitive task
A82-32005

D

DASHECOFF, S.
Effects of hyperventilation on pulmonary blood flow and recirculation time of humans
A82-32832
DAUDOVA, T. T.
An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings
A82-34688
DAVIDSON, S. B.
Effects of acute cold exposure on muscle amino acid and protein in rats
A82-32840

DAVIS, B.
Effects of acute cold exposure on muscle amino acid and protein in rats
A82-32840
DAVYDOVA, N. A.
Sympathoadrenal system of cosmonauts following 7-day flights
N82-25776
DEAMER, D. W.
Encapsulation of macromolecules by lipid vesicles under simulated prebiotic conditions
A82-33286
DEGTIAREV, V. A.
Venous pressure as an indicator of circulating blood volume
N82-25777
DELAAT, J. A. P. M.
The effect of noise-induced hearing loss on the ability to understand speech
[IZF-1981-11] N82-25783
Statistical examination of hearing loss due to gunfire noise and industrial noise: Consequences for screening audiometry with fixed frequencies
[IZF-1981-20] N82-25785
DEMETER, I.
Elemental analysis of samples of biological origin relative to their protein content by means of charged particle bombardment
[KFKI-1981-26] N82-25752
DEMIDOVA, A. I.
The carbohydrase system of the small intestine of rats of various ages following heat and cold exposures
A82-33135
DENIJNE, D.
Evaluation of immunological methods for toxicity studies in animals: Inhalation studies with benzene and halothane in rats
[MBL-1980-4] N82-24814
Inhalation studies with benzene in rats. Part A: Toxicological data
N82-24815
DEVIATKOV, N. D.
The effect of millimeter-wave electromagnetic radiation on biological structures and organisms of varying complexity
A82-34768
DEVRIES, H. M.
Effects of impulse noise on human beings: A pilot study on annoyance ratings in the laboratory
[IZF-1981-9] N82-24825
DJATELINKA, I.
Plasma and tissue lipids of rats following flight aboard the Cosmos-1129 biosatellite
N82-25768
DOBRINA, S. K.
Lipid peroxidation and retinal damage under stress
A82-34682
DOLGINA, M. I.
Pigskin xenografts in treatment of patients with extensive burns
N82-24808
DOLIDZE, N. V.
Effects of experimental stationary magnetic field on metabolism of some ions in blood and myocardium
N82-24822
DONCHIN, E.
The event related brain potential as an index of information processing, cognitive activity, and skill acquisition: A program basic research
[AD-A111057] N82-24827
DONETSKII, D. A.
Pigskin xenografts in treatment of patients with extensive burns
N82-24808
DONN, B.
Comets - Chemistry and chemical evolution
A82-33280
DRAGANIC, I.
Enzymatic characterization of peptidic materials isolated from aqueous solutions of ammonium cyanide /pH9/ and hydrocyanic acid /pH6/ exposed to ionizing radiation
A82-33277
DRAGANIC, Z.
Enzymatic characterization of peptidic materials isolated from aqueous solutions of ammonium cyanide /pH9/ and hydrocyanic acid /pH6/ exposed to ionizing radiation
A82-33277
DRINKWATER, B. L.
Women at altitude - Cardiovascular responses to hypoxia
A82-32009
DUDNIKOVA, G. N.
An autoradiographic and electron-microscope experimental study of the effect on wound healing of various Soviet dressings
A82-34680
DUMANSKII, IU. D.
Metabolic changes in experimental animals as indicators of biological effects of 50 Hz electromagnetic fields
N82-24821
DUPUIS, H.
Immediate effects of vibration transmitted to the hand
A82-33756

E

EICHBERG, J.
Synthesis of phosphatidylcholine under possible primitive earth conditions
A82-33285
EKBLOM, B.
Acute hypervolemia, cardiac performance, and aerobic power during exercise
A82-32836
ELFIMOV, E. I.
Magnetic-field effect on photophysical processes in the light-harvesting pigment apparatus of purple photosynthetic bacteria
A82-34917
ELLENS, E.
Visual ergonomics in cartographic and lithographic work at the Topographic Service. Part 2: Requirements and recommendation for work stations
[IZF-1981-14-PT-2] N82-25798
ENGEL, M. H.
Distribution and enantiomeric composition of amino acids in the Murchison meteorite
A82-32210
ENRIGHT, P. R.
Predicting pilot opinion ratings of flying qualities of highly control augmented aircraft using an optimal pilot model
[AD-A111136] N82-24837
EVERETT, W. D.
The aerospace screening electroencephalogram - An analysis of benefits and costs in the U.S. Air Force
A82-32013

F

FARHI, L. E.
Effects of hyperventilation on pulmonary blood flow and recirculation time of humans
